INTRODUCTION.

FOR more than one hundred years, the United States of America was confined to the American continent. Through the travail and bloody sweat from Lexington, in 1775, to the surrender at Yorktown, in 1781, the thirteen colonies were engaged in the struggle for existence, for life, for independence. The war of 1812 was necessary to demonstrate the right of the United States to a membership among the brotherhood of nations. The crucial test of all came a half-century later, when the house divided against itself had yet to prove that it should not fall. Such proof was given with a grandeur, with a majesty, and with a completeness of triumph and accomplishment that placed our country among the very foremost in the van of civilisation, of progress, of humanity, and all that tends to make a people truly great.

When the Constitution was adopted, the settled portions of the United States fringed the Atlantic coast from Maine to Florida. The western boundary was the Mississippi River. Beyond the Father of Waters stretched an expanse of mountain, river, and prairie, far exceeding in area the region which constituted the original United States. Then followed the acquisition of Florida, Louisiana Territory, and, later, the countries obtained by the conquest of Mexico, and, finally, the immense purchase of Alaska from Russia, our traditional friend.

Thus far, it will be noted, our acquisition of territory was restricted to the continent itself. It is a fact, of which perhaps not all are aware, that the present population of the United States can be expanded twelve-fold before its density will equal that of some of the most prosperous countries of Europe. But for the Spanish-American war, it is not conceivable that the out-reaching of the United States, or the "earth hunger," as it has been aptly termed, would have extended beyond either of the enclosing oceans. To our north lies Canada, so immovably chained to the mother country that not a link can be severed; south of the Rio Grande our tropical neighbour has acquired a prosperity and power, under the admirable rule of its President, which ensure an indefinite continuance of the greatness that has lifted it to a plane never before attained, and scarcely dreamed of by its most patriotic sons.

Never was there a more holy war than that in which the United States engaged for the liberation of Cuba. For more than a century her people had been ground into the very dust by the brutality of the most merciless nation in the world. Spain, from the very hour that her explorers first set foot on American soil, proved a curse

and a blight, and the inherent ferocity of the Spaniard quickly shrivelled into idiocy. When the wit of a child would have taught the groping visitors to cultivate the goodwill of the simple-minded natives, who were eager to show their friendship, and to provide plentiful food for the starving intruders, the latter, in pure wantonness, murdered, massacred, and tortured to the utmost limit of human ingenuity. Balboa, in the early years of the sixteenth century, was guided across the isthmus by a devoted band of Indians who willingly acted as slaves for him and his companions, and risked their lives to secure the indispensable food for them. Then, when Balboa climbed the rocky height on the western shore and looked out over the limitless expanse of the South Sea, and was thrilled and overcome by the thought that he was the first white man that had gazed upon the vastest ocean of the globe, he sank upon his knees, thanked God for his mercies, and then, like true Spaniards, he and his men turned about and cut and slashed the Indians to death.

The horrible crime of Balboa was repeated by all the Spanish explorers, without exception, who came after him. The story is one long, ghastly record of cruelty, treachery, crime, blood, and idiocy. Providential indeed was it for the future of our country that the interest of Spain was diverted to the far south, and that the United States was colonised by the English, the Dutch, the Swedes, and the French, — peoples who were sturdy, honest, enterprising, and who believed to a practical extent in the Golden Rule. Had it been otherwise, and had Spain been our mother, the history of Cuba, with all its terrifying atrocities, miseries, and failures, would have been our own.

The first conflict between the young Giant of the West and the decaying monarchy of Spain could have but one issue. The Titan blows of the resistless hammer crushed the paste jewel to powder, and the war, lasting but a few months, humbled the pride of the decrepit kingdom deeper even than when the lusty sons of Albion and the storms of a wrathful heaven sent the Grand Armada to the bottom of the ocean. The forces of Castile were driven out of Cuba by the cyclonic heroism of the American regulars and volunteers; Admiral Cervera's fleet was riddled like so much pasteboard; the campaign in Porto Rico resembled an opera bouffé; and Admiral Dewey, sailing into Manila Bay on that memorable May morning in 1898, smote the opposing fleet and forts with his unerring cannon, as if they were so many children's toys, set up to be demolished by those to whom the task was the merest sport itself.

If Spain had acted the zany for centuries, the time now came when her own existence forbade her to play it longer. The Treaty of Paris followed, and by its terms the United States became sovereign over the Philippines, Porto Rico, Guam (the largest of the Ladrone Islands), and subsequently acquired the ownership of the island and harbour of the Samoan island of Tutuila. Thus was ushered in the era of expansion, and our country gained a prestige and momentous interest in the Far East which give to the present work a value of the highest importance.

The first step of our country, however, toward its entrance into the ranks of Powers

whose interests touch both hemispheres, was taken during the progress of the Spanish-American war by the annexation of Hawaii. In answer to a petition from the islands, Congress passed an act, on July 7, 1898, to annex them, and the formal ceremony of raising the United States flag took place on the 12th of the following August. This group was formerly known as the Sandwich Islands, and includes eight inhabited and four uninhabited islands, which are situated about one-third the distance between San Francisco and Sydney, Australia. They are the most important of all the Pacific islands, and their acquisition by the United States was not only valuable, but a necessity, in order to prevent their falling into the possession of some other power which, in case of war, would have used them with disastrous effect to our interests. These islands were first opened to the world by American whalers, and, with the decline of that industry and the increase of general commerce, they became recruiting ports to the merchant marine. Americans own nearly all the fertile area, and the larger part of their commerce is with our own country. Hawaii is one of the greatest sugar-producing countries in the world.

Although the transition of these islands from their independent form of government to a possession of the United States was attended at first with some friction, yet on the whole the change was effected quietly, and the government to-day is of the most orderly and praiseworthy character.

As evidence of the prosperity of the islands under the new régime, the exports from the United States to Hawaii nearly doubled in the year following annexation. In the year ending June 30, 1900, our trade with the islands amounted to \$36,000,000, of which about two-thirds was sugar imported from the island ports. Among the other products of the islands are rice, fruits and nuts, coffee, hides and skins, and copra or dried cocoanut. The goods imported by the islands include wheat flour and all kinds of manufactured articles.

The natives of Hawaii are called Kanakas, and are rapidly dying off, but their places are more than filled by a new population. There was danger at one time of the islands being overrun by Chinese coolies, but they are now excluded. Emigrants are mainly composed of Portuguese, Americans, and Japanese, and the increased productiveness of the islands is due to their industry and enterprise.

Few countries have a more interesting history than Hawaii. Leaving the vague, misty traditions running backward for centuries, it is shown in the following pages that the discovery of this group of islands was accidentally made by the famous English navigator, Captain Cook, who, in the month of January, 1778, sighted the island of Oahu, followed a few days later by the discovery of other islands. Captain Cook, however, did not see Hawaii until the following year, when, sad to say, like many another pioneer, his life paid the forfeit of his great achievement. A singular fact, having no real connection with the incidents just narrated, is that the widow of Captain Cook survived his death for more than half a century.

Since Hawaii is now an integral part of the great Republic, all relating thereto is

of the highest interest and value. The author of "The Far East" sets forth in accurate, well-chosen, and graphic language the fullest information regarding the topography of the islands, all that is known of their history, the numerous productions, the facilities, the picturesque people, their social and civil condition, the cities, towns, and settlements, and, indeed, all that the student or immigrant can possibly wish to know.

The Treaty of Paris made the island of Porto Rico an American possession. It ranks fourth in size among the West Indies, has a length of ninety-five miles from east to west, and about thirty-five from north to south. Since its population is estimated at nearly a million, it will be seen that it is one of the most thickly settled regions in the world. San Juan, on the northern coast, is the capital, while Ponce, in the south, is the largest port. It exports a fine quality of coffee, sugar, and tobacco, and imports manufactured goods, flour, and fish. Porto Rico, in 1900, exported goods to the United States to the amount of \$1,350,000, its imports being almost three times as great.

Another possession acquired by the United States through the Spanish-American war was Guam, the largest of the Ladrone Islands. Its area, however, is so insignificant that its importance is due to its being a convenient telegraph and coaling station on the voyage from Hawaii to the Philippines.

The island and harbour Tutuila, Samoa, passed by treaty of Great Britain and Germany into the hands of the United States in 1899. The island has only a few thousand inhabitants, and possesses little commercial importance, but it has one of the best harbours of the Pacific, and gives to us a fine coaling station on the route from San Francisco to Australia.

The greatest and most valuable possession secured to the United States by the Treaty of Paris was the immense group of islands known as the Philippines. These are more than a thousand in number, with a land area exceeding a hundred thousand square miles, or greater than the combined extent of the six New England States and the State of New York. From north to south, they extend fully a thousand miles, with a breadth of six hundred from east to west. Naturally, many of the islets are uninhabited. The principal islands are twelve in number. Luzon, the most northerly, is as large as the State of Ohio, and contains the city of Manila, the metropolis of the Philippines, while Mindanao, the most southerly island, is of slightly less extent. The chief products of these islands are tobacco, sugar, hemp, and coffee. Tobacco has been grown for more than a century, and the export of cigars to Europe amounts to a hundred millions a year. The Manila hemp is famous throughout the world. It is produced from the fibre of a species of banana, and is also used as paper stock. Our exports to the Philippines were only \$127,000 in 1898, but two years later they had increased to \$2,500,000, while the imports rose from \$3,830,000 to \$5,800,000.

The natural wealth of these islands is prodigious. Stretching through fifteen degrees of latitude, with mountains of considerable elevation, with numerous streams

and fertile valleys, these productions display the choicest richness of the torrid and temperate zones. In the depths of the vast forests are found the most valuable species of woods, such as cedar, ebony, ironwood, mahogany, logwood, sapan-wood, gum-trees, and scores of other kinds of woods, unknown on the American continent. The *panare* and *malare* are two woods which have been exposed to the action of water for hundreds of years, without showing the slightest deterioration. Probably the most attractive and useful tree is the bamboo, which seems to grow everywhere, and supplies an endless variety of needs. It is the chief material in the construction of bridges, houses, and even churches, while from it are made baskets, mats, chairs, vessels for liquids, measures for grain, musical instruments, household utensils, vehicles, rafts to float on the rivers, and head-gear. Indeed, there seems to be no vegetable production so calculated to meet the general wants of man. The tender shoots of the bamboo are considered a delicacy by the inhabitants, and the horses and cattle are fond of the leaves. One variety of the cane contains a stone said to be a sovereign remedy for many of the ills of the flesh, while still another kind produces a gum which is a specific for inflamed eyes.

Though it would seem, from what has been stated, that the bamboo is the most valuable native tree of the Philippines, yet the inhabitants gain a larger income from the cocoanut-palm, which is universally cultivated. The demand of the foreign market for the fruit is never fully met, and there is no part of the tree itself which is not utilised. The framework of the native dwellings is made from the smooth trunk, the roof from its leaves, and the chairs and tables from its wood. The fibre of the tree furnishes the native with the mats on which he sleeps; its nuts form his meat; the shells his household utensils, while the value of the "milk in the cocoanut" is proverbial. The sap yields an oil which, in a cool climate, becomes a solid, and is made into soap and candles. It may be said that every hut and house in the interior is illuminated by means of cocoanut-oil. Moreover, the delicate flowering stalk affords a delicious beverage, known as the *tuba*, and the most comfortable of raiments is made from its fine, fibrous particles.

Another highly useful plant is a species of bush rope, which sometimes attains the astonishing length of one thousand feet. It may be described as a natural rope or cord, with no end to its diversified uses.

The mango is the most important fruit of the Archipelago. Its meat is creamy and delicious, and the tree grows to a great size. Two, and sometimes three, pickings are obtained every year. There are over fifty varieties of bananas. The *papaw* yields a fruit resembling in shape and flavour the melon; guavas, tamarinds, pineapples, lemons, huge oranges, the custard-apple, citron, breadfruit, strawberry, and other products peculiar to the tropics flourish in great luxuriance. A remarkable fruit found in the western islands is the *durien*, — a dainty, delicious production which, however, bears only once in twenty years. Investigations made since our acquisition of the Philippines have brought to light numerous plants and herbs of great medicinal

value. A striking proof of the amazing fertility is afforded by the common sight, seen on the same plot of land, of the planting, cultivating, and harvesting, going on in alternation. In the words of the author, "From the great storehouse of natural treasures of Luzon, the largest and richest of these pearls of the Pacific, to the hundreds of smaller gems, all resplendent in a vegetation which clothes not only the plains and the lowlands, but the mountains and the seashore, with a verdure of many hues and never-fading gloss, the florist finds his paradise, and the botanist his wonderland."

Although the Philippine group for centuries has poured treasures into the lap of Spain that are beyond estimate, yet it would be unjust to overlook the many serious drawbacks which must be encountered by every settler among the islands. Our soldiers, who have spent weary months in the attempt to crush the rebellion led by Aguinaldo, tell of the seasons described as "six months of mud, six months of dust, six months of everything." The northern islands are swept by the Chinese typhoons, which in one season destroyed four thousand houses and three hundred people. Earthquakes are so numerous that multitudes of lives are lost every year from that cause. In 1863, one-half of the city of Manila was tumbled into ruins, and more than three thousand of its inhabitants were killed or injured. Tidal waves have been equally destructive to life and property. Fever, malaria, and other tropical diseases are common, and the heat is especially oppressive to unacclimated persons, women and children being particularly subject to the perils of the climate. The experience of our soldiers in Cuba and in the Philippines, where sanitary conditions have been bad, has been attended with many fatalities. Such men, from natural carelessness, are certain to suffer severely. Still, the Philippines are not as unhealthful as would be supposed from the foregoing statements. When American thrift and enterprise shall have had time in which to introduce modern systems of sanitation, the improvement in health will be marked and decisive.

Animal life in the Philippines is less prominent than in many other countries of the same latitude. The wildcat, wild boar, buffalo, hog, deer, and monkey abound in the forests. The reptiles and venomous insects are a pest, the most prominent being frogs, lizards, snakes, centipedes, gigantic spiders, tarantulas, hornets, beetles, ants, horned toads, and enormous bats. Some of the bats have a spread of six feet, with bodies as large as cats. One of the deadliest of all serpents is the *manapo*, whose bite is as fatal as that of the East Indian cobra. It is occasionally encountered in the rice fields, but, fortunately, it is quite rare. Crocodiles of huge size abound in the fresh water streams, and a species of cobra is sometimes seen in Samor and Mindanao. Ants and mosquitoes form an almost intolerable pest. The white ants work in the dark, and destroy the hardest pieces of furniture. It is said that the whole framework of a house has been known to collapse from the ravages of these insects. Every few years, swarms containing numberless millions of locusts sweep the country bare of all the crops, with the single exception of the hemp plantations, which are exempt. The only

way by which the natives even up matters with the locusts is to eat them, and they are considered such a delicacy that, in many instances, the parish priest has prayed for their coming. The Philippines contain more than six hundred species of birds. Some of these have wonderfully brilliant plumage but among them all there is not one sweet singer. The game birds include the snipe, pheasant, pigeons, ducks, woodcocks, and various waterfowls.

It is impossible, in an introduction of this character, to do more than outline in the vaguest and most imperfect manner the wealth of subjects treated in the pages that follow. As we have already intimated, the acquirement of Porto Rico, Hawaii, a portion of the Ladrões, and the immense Archipelago in the Far East, gives an interest and value to all the knowledge obtainable regarding them. Their history, their natural productions and capabilities, their inhabitants, their attractions, their advantages and disadvantages as a field for American enterprise, are of the deepest moment to the citizens of the United States. That the field thus opened to our commerce, trade, and industry is of vast and far-reaching importance is self-evident. To meet the widespread demand for full and accurate information regarding our possessions in the Far East, these volumes are now offered to the American public.

EDWARD S. ELLIS.

THE PHILIPPINE ISLANDS.

BY

MAJ.-GEN. JOSEPH WHEELER.

WHEN the heart of the American people was touched by the cruelty and terrors which were being enacted in the island of Cuba, and, added to this, came the distress caused by the harrowing tidings of the destruction of the battle-ship *Maine* with the instant death of 267 of her gallant crew, but one thought pervaded the American mind, and a demand came from every town and hamlet, that this great republic do its duty to suffering humanity, and strike a decisive blow in defence of national honour.

The glorious victories which followed the American flag on land and sea, and, almost at the same time, in both hemispheres, resulting in the treaty of peace which was concluded at Paris, placed upon our country the responsibilities with which we are now confronted.

New conditions therefore are presented with which it is the duty of the American republic to deal.

Four years ago the exercise of sovereign power beyond our Pacific shores had not been a matter of consideration by our government.

During that short period, the logic of events has given us islands with harbours which place the great Pacific Ocean, with its wonderful commercial advantages, very largely under our control.

In a speech in Boston a short time before his death, the great naturalist, Professor Agassiz, referred to a work by Humboldt as descriptive but not comparative; and he explained, with marvellous clearness, that in order to be of value, a statement of facts or a description must be compared with something with which we are familiar.

It is equally important, in considering that policy which will be best for the welfare of our own people and also of those with whose destiny we have so much to do, that we keep in mind the fact that our wondrous growth and increased power during the last half century have wholly changed our relations with the other nations of the earth.

We all revere the traditions of our country and have profound respect for the expressions of the great statesmen whose wisdom gave us this splendid government under which we live. We must, however, recognise the vastly changed conditions, and the rules which they laid down for our guidance should be construed in the light of the present day. Many policies which would have been good a century, or even half a century ago, would be fatal to our country's welfare to-day.

During that period, we have changed from one of the weakest to the most powerful nation on the globe.

Fifty years ago the monarchs who governed what were then the leading nations of the earth established diplomatic relations with scarcely a thought of the young republic on the western shore of the Atlantic. Now, the powerful nations of the world seek our friendship, and none venture any important diplomacy without first learning whether it will be acceptable to this great republic.

The words of wisdom and advice from Washington, Jefferson, and Jackson were uttered when we were essentially an agricultural people. The question of our manufactures being used in foreign lands had hardly been considered, and in those early days but few of our farm products were sent beyond our shores. Now, in the products of our farms and factories, we far excel the greatest commercial nations.

Our production of coal, steel, pig iron, finished iron, iron ore, copper, cotton, wheat, corn, and petroleum far exceeds the production of those staple articles by any other nation.

Half the population of the world is in what we call the Orient. Their products are very largely articles which the world needs and which can only there be produced, or, at least, can better be produced in those localities than elsewhere. This gives this vast population a great purchasing power, and the leading nations of the world are exercising every possible influence to establish with them favourable commercial relations.

Producing, as we do, half the staple products of the earth, while we have but one-twentieth of the population, these markets are more essential to the United States than to any other nation.

The needs of all people increase as they advance in civilisation. Railroads and locomotives will be needed by the people of the Orient in numbers far beyond our present conception. Electric and gas plants for lighting cities and houses will be demanded. Water-works, sanitary, telegraphic, and telephonic equipments, agricultural implements, sewing-machines, typewriters, and a thousand articles which we manufacture, these people will purchase.

Probably the greatest advantage to our country will be the market we should secure for our cotton goods. We now produce eighty per cent. of the raw cotton which finds its way to the world's markets. It brings us in its raw state an annual return of about three hundred millions of dollars. When transformed into the cheapest cotton cloth, its value is enhanced nearly four fold, and when manufactured into thread and fine goods, its increased value is ten, twenty, and even thirty fold.

Since our country came into existence as an independent sovereignty, diplomatic complications have frequently arisen, a solution of which has, in all respects, been creditable to us as a nation, and no American can doubt for a moment that the problem now confronting us will be solved in a way that will advance the cause of civilisation and work out results not only to our advantage, but also to the material betterment of all who are brought under American control and influence.

If Cuba is called the "Gem of the Antilles," surely the beautiful Philippines should be called the "Gem of the Orient."

As Cuba stands the gateway to the Gulf of Mexico, so do the Philippines, with their magnificent harbours, supply a gateway to the people and marvellous resources of China and the Indies.

From north to south, their extent is equal to the distance from Lake Erie to the Gulf of Mexico.

Their surface includes the low fertile lands where rice, sugar, and other tropical products are cultivated; the table-lands where we find a climate and products similar to those of the temperate zone; also high mountains, which are, as yet, unexplored. Virgin forests of the most valuable timber are extensive, and nearly all minerals are more or less abundant.

The people are surprisingly intelligent, considering that they have suffered nearly four centuries of Spanish misrule and oppression.

They are very devoted to their religion, and it is my firm belief that, under a wise, humane, and just government, most of them will become industrious, loyal Americans

JOSEPH WHEELER.

PREFATORY NOTE.

IN the preparation of a work of this kind, which requires the consultation of so many authorities, it is difficult to specify one's indebtedness in all cases. The author desires to express his obligations in that part of his work which treats of the Hawaiian and Philippine Islands to Daggett's "Legends of Hawaii," Carpenter's "America in Hawaii," Musick's "Our New Possession," "Hawaii's Story by Hawaii's Queen," Clare's "Hawaii Nei," Foreman's "History of the Philippines," Worcester's "The Philippine Islands and Their People," Lala's "The Philippine Islands," and other books, while he has had frequent recourse to the Reports of the United States Government. Those works most often consulted upon Japan have been Murray's "Story of Japan," Griffith's "The Mikado's Empire," Riordan's "Sunrise Stories," Lowell's "Soul of the Far East," and Baxter's "In Bamboo Lands." The author has been materially assisted in the part devoted to China by the works of Colquhoun, Thomson, Boulger, Lord Charles Beresford, Mrs. Bishop, Miss Seidmore, and several others, aside from many miscellaneous papers and documents.

For aid in illustrating the work, the publishers wish to express their thanks to Hon. Gorham D. Gilman, who generously allowed them such selections as they desired from his extensive collections of photographs on Hawaii, probably the largest in the country, and to Professor Fryer, of the University of California, for similar courtesies in relation to the illustrations of China.

HAWAII.

BY

HON. HENRY CABOT LODGE,

UNITED STATES SENATOR.

IN the year 1893 the Hawaiian question was one of the leading issues of our politics. Mr. Cleveland then undertook to reverse the traditional policy of the United States in regard to the islands, parties divided over the question, the deposed queen found eager partisans, and the successful leaders of the revolt against her were warmly defended and as earnestly attacked. Five years later, in the midst of a war which furnished an argument so conclusive upon the subject that no man could successfully gainsay it, the islands were annexed to the United States. With annexation actually accomplished, the Hawaiian question came to an end, and it was all so natural, and, indeed, so inevitable, that it now requires an effort to understand how there could ever have been any difference of opinion in regard to it. The islands have come so easily into our system, and so obviously belong there, that once ours they have been in a measure forgotten, and, while the country has been filled with discussion in regard to Porto Rico and the Philippines, Hawaii has dropped out of sight. This is due, of course, to the fact that the islands for more than fifty years had been practically ruled by Americans, and had become thoroughly Americanised by the New England missionaries, who had settled there in the first half of the nineteenth century, and by their descendants. But it would be most unfortunate if, on account of our familiarity with the islands so closely connected with us for so long a time, and because they have so smoothly and quietly become a part of our system, we should overlook their value and their meaning to us, — past, present, and in the time to come.

Among the new possessions which have come to us in these last three years, so crowded with great events, none is more important to our future than Hawaii. This seems a very strong statement in view of the almost incalculable importance of the Philippines to our position, both military and commercial, in the East. And yet, although the statement is strong, it is not overdrawn, and the Philippines themselves have greatly enhanced the value of Hawaii. The Hawaiian Islands are rich, very fertile, capable of producing most valuable crops of sugar, coffee, and bananas, and of sustaining a large and prosperous population. This intrinsic worth is, however, the least part of their value to us. Look at the map, and their importance, their vital importance, to the United States becomes at once apparent. The largest of the Pacific

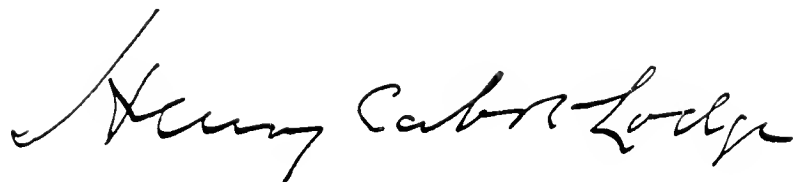

HAWAII.

island groups, Hawaii, lies far away to the north and east of the Polynesian chain of islands, and almost in the centre of the great ocean which stretches from China to California. The master of Hawaii can reach more quickly to more essential points east and west, north and south, than any one else in the Pacific. In Hawaii, also, is Pearl Harbour, one of the two deep-water and naturally sheltered harbours to be found in all the islands, the other being Pago-Pago, in Tutuila, which is also in our possession, but far inferior in geographical position to that in Oahu. With moderate improvement Pearl Harbour would shelter a navy, and with comparatively small expenditure can be made impregnable. A foreign nation holding Oahu and Pearl Harbour would be not only a constant menace to America, but in the event of war would have an advantage in attacking our Pacific coast which it would be almost impossible to overcome. The mere possession of the islands by the United States is a great protection, and if we fortify them and create a naval station there no enemy would dare to assail the Pacific coast, with Pearl Harbour, so easily made impregnable, behind them. The strategic importance of the islands is, moreover, as obvious commercially as from a military and naval point of view. Hawaii has well been called the "crossroads of the Pacific," and although the shortest route to Japan from San Francisco, sailing on a great circle, is just south of the Aleutian Islands, Honolulu is none the less the central point for the intersection of steamship routes and ocean cables between America, on the one side, and Polynesia, Australia, the Philippines, and Southern China on the other.

Islands possessing the military and commercial importance which has just been indicated deserve to be well known and thoroughly understood by the people who have so lately added them to their domain. Very fortunately it is possible not only to write the history of these islands fully and accurately, but that history is picturesque and interesting in a very high degree. Their old name of the Sandwich Islands, now happily extinguished, carries us back to an English eighteenth century minister who was himself a remarkably stupid and worthless nobleman, but whose title and office are associated with some of the most important voyages of discovery made at that period. The death of Captain Cook is indissolubly associated with Hawaii in the tragic ending of a narrative of adventure which has charmed generations of children to a degree second only to that enjoyed by Robinson Crusoe. Then we meet with Vancouver, and then comes the career of Kamehameha I., a man of real genius, both military and civil, who consolidated the islands under one government and founded the monarchy which has endured down to our own time. Next comes the arrival of the American missionaries, the development of the islands under their influence, and the gradual intertwining of the fate of the islands with that of the United States. From this period we trace the steady growth of the American influence in Hawaii and the seemingly narrow escape of the islands from the domination of European powers. We meet, as we proceed, with the great name of Webster, who warned foreign states of American interest in these islands, and of Marcy preparing to annex them just on the eve of a civil war which drove all policies, but the one desperate determination to save the country, from the

HAWAII.

hearts and the minds of the people. Then comes the gradual reawakening of interest in Hawaii, the reciprocity treaty which placed them practically within our control, the Harrison treaty of annexation, and at last the movement which in the shock of another war brought about their final acquisition by this country. The history of Hawaii ought to be read now by all Americans, and the story of the natives and of our own people who went among them so many years ago should become familiar to us all, for it is now one of the most interesting chapters in the westward march of the United States.

A handwritten signature in cursive script, reading "Henry Cabot Lodge". The signature is written in dark ink on a plain background. The first letter 'H' is large and stylized, with a long horizontal stroke extending to the left. The rest of the name is written in a fluid, connected cursive style.

CHAPTER I

CAPTAIN COOK'S DISCOVERY.

THE seafarer crossing the Pacific Ocean under the imaginary line of the Tropic of Cancer, sailing from Cape St. Lucas, at the southern extremity of Lower California, due west for over eight thousand miles, or one-third of the distance around the globe, meets with only a solitary spot of land in all that long water journey. Should he traverse the sea in a slightly northwesterly direction, from Panama to Japan, he would make a trip of equal length and loneliness, passing midway on his voyage the same ocean isle as before. If he should start from San Francisco, bound to Queensland, he would again compass his stupendous passage

greeted by the same lonely sentinel of the mighty deep. But this time he would find soon after passing this spot innumerable islands, isles, and coral reefs scattered all along his way. On the north, however, not a speck dots the watery expanse until the polar lands are reached.

This breakwater of the Central Pacific, which old ocean has tried in vain to swallow for numberless ages, is Kauai, the most northerly of the Hawaiian Islands. Forming a happy resemblance to a huge cornucopia of 360 miles curve from northwest to southeast, between latitude $18^{\circ} 55'$

and $22^{\circ} 20'$ N., and longitude $154^{\circ} 55'$ and $160^{\circ} 15'$ W., this group of islands is the most northerly cluster of the Polynesian Archipelago.

HAWAIIAN CHIEF.

While numbering twelve in all, four of these islands are really nothing but the brown heads of rocky pillars thrust forbiddingly above the surface of the deep, and the fifth is too small and meagre in its resources to afford a population, which leaves the poet's "seven sunny isles of the southern seas." Beginning with the point of this horn of plenty and running southward the list

of eight comprises Niihau, 80 square miles in area; Kauai, 590 miles; Oahu, 600 miles; Molokai, 270 miles; Maui, 760 miles; Lanai, 150 miles; Kahoolawe, 63 miles; Hawaii, 4,210 miles in extent. The entire group contains 6,740 square miles, or about the amount of territory of the State of Massachusetts, Hawaii having almost two-thirds of the whole area.

The written history of the Hawaiian Islands covers a period of less than a century and a quarter, beginning with the discovery of Captain Cook in 1778. Running into this from the centuries before there is another story told by the tongue, the traditions of an uncivilised race. Behind these

HAWAII.

PINEAPPLE GARDEN, OAHU.

vague accounts of warlike deeds and religious mysticisms, there is yet another era portrayed on the scrolls of the silent ages. This takes us back into the misty past thousands of years,—back to a period when all the waters were locked in crystal prisons, and plant and animal life were unknown. The war of the elements ensued; the ice king retreated before the equatorial god; the silence of the solitude was broken by the grinding and crashing of the glaciers. The white pinnales of the ice-floes melted away, and in their place of desolation rose the mountains of a productive land; instead of the icy fields and frozen spikes came fertile valleys, with trees, plants, and flowers; in place of the bitter cold, the balmy climate; on the scene of lifelessness, a race of human beings. This is the mysterious and awe-inspiring picture of the birth of a world.

Captain Cook's discovery of this group of islands was an accident. The British government, pleased with this great navigator's previous voyages of exploration in the then unknown Pacific Ocean, with the counsel and assistance of Lord Sandwich of the Admiralty,

CAPTAIN COOK.

fitted him out for a third trip, placing under his command the two ships *Resolution* and *Discovery*. He sailed from Plymouth, England, July 12, 1776, only eight days after the signing of the Declaration of Independence by the representatives of the thirteen colonies of America.

Captain Cook's orders were to revisit the islands of the southern seas, where he had twice wintered, "to disseminate and naturalise" some of the useful animals of Europe in that remote region, and to find a northern passage to the Atlantic Ocean. He cruised around in the Polynesian Archipelago for a year and a half, leaving on the different islands those domestic

animals which have proved of such value to the inhabitants. Then he sailed from the Society Islands on his way to the north.

On the eighteenth of January, 1778, he sighted the island of Oahu, and, sailing along its southwestern coast, the next day he discovered the islands of Niihau and Kauai. The following morning, January 20th, he anchored at Waimea, on the shore of Kauai, a place noted in the traditions of the natives as having been the battle-ground of ancient kings.

As the vessels sailed up the coast, the inhabitants of the island began to appear in large groups, alarmed and mystified over the arrival of the strange ships. In such numbers did the natives rush to the water's edge, as the first boat started for the shore, Captain Cook ordered a volley of

shot to be fired over their heads. One of the excited mob was killed, but, as the firing was not continued, the natives received their visitors in a friendly manner. Presents were exchanged, and the newcomers were highly pleased with what they saw.

After staying on this island a few days, and laying in a fresh stock of water and provision, the English ships

HAWAIIAN COAT OF ARMS.

headed away to Niihau, where they remained until February 2d. Believing he had discovered a group of islands, Captain Cook named them for his patron, Lord Sandwich, and set sail for the polar regions, on what he fondly anticipated was his homeward voyage.

In sight of the beach at Waimea is still pointed out a large, flat rock, bearing the mark of a broad arrow, claimed to have been made by Captain Cook to designate the place of his first landing. In the village are three other stones with similar markings made by the English commander for the same purpose.

His northern voyage proving a disappointment, though he explored the coast of Alaska, Bering Strait, and the Arctic Ocean until finding his progress stopped by the ice-fields, Captain Cook was glad to return to the

south, where he might spend the approaching winter, to resume his search for the northern passage another summer.

On the morning of November 26th, he sighted for the first time the island of Maui, and he anchored at Wailua. The news of his visit to Kauai seemed to have preceded him here, for he was greeted by a larger crowd than before, that considered him as a god, and his followers as supernatural beings. His ships were thought to be moving islands, which

SCENE ON MAUI.

could send forth thunder and lightning at the command of their master. The natives showed no signs of hostility.

After laying off Maui several days, during which time he had a brisk trade with the inhabitants, Captain Cook sailed along the coast until, on the thirtieth, he discovered the island of Hawaii. Judging this to be larger and of more importance than the others, he decided to make its circuit, which took him seven weeks before he dropped anchor in the ill-fated bay of Kealahou. He had called at numerous villages on his trip, and everywhere had been treated with generosity and loaded with

divine honours. Here over a thousand canoes swarmed in the waters around his ships, most of them crowded with people, and laden with the richest tributes the land afforded, choice fowls and hogs, fruits and vegetables of many kinds and rare excellence. In all that vast number not a weapon was to be seen, one and all having come to pay their free and spontaneous worship to the newcomers.

No sooner had the English commander and a portion of his crews gone

ashore, than the natives announced a season of festivities and sacrificial ceremonies to their visitors. Captain Cook was looked upon as the reincarnation of their god Lono, whose return to the earth their high priests had prophesied, and he was escorted to the *heiau* or temple built in his honour, while the people and chiefs, even to the king, prostrated themselves before him.

Captain Cook and his reckless tars quickly caught the spirit of their tempters, and for eighteen days they revelled in the prodigal simplicity of their worshippers.

There, under the dome of

ANCIENT PAGAN TEMPLE, HAWAII.

the sleeping Hualalai, on the rich lava beds builded by this mighty volcano in the centuries unrecorded, and fringed with tall, simuous, dark-crested cocoa-palms, half concealing the sea below, unrestrained nature ran riot with itself.

Then the visitors grew overbearing and independent. The temple of the gods was turned into an observatory; the consecrated platform was transformed into a sail-loft; the sacred palisades of the *heiau* were carried away to be used as fuel to cook the food of these newcomers! At first

amazed, the spectators became indignant. It had been enough that their rich presents had been reciprocated by a few hatchets and knives, and their magnificent gifts of feather mantles and helmets had been taken without thanks.

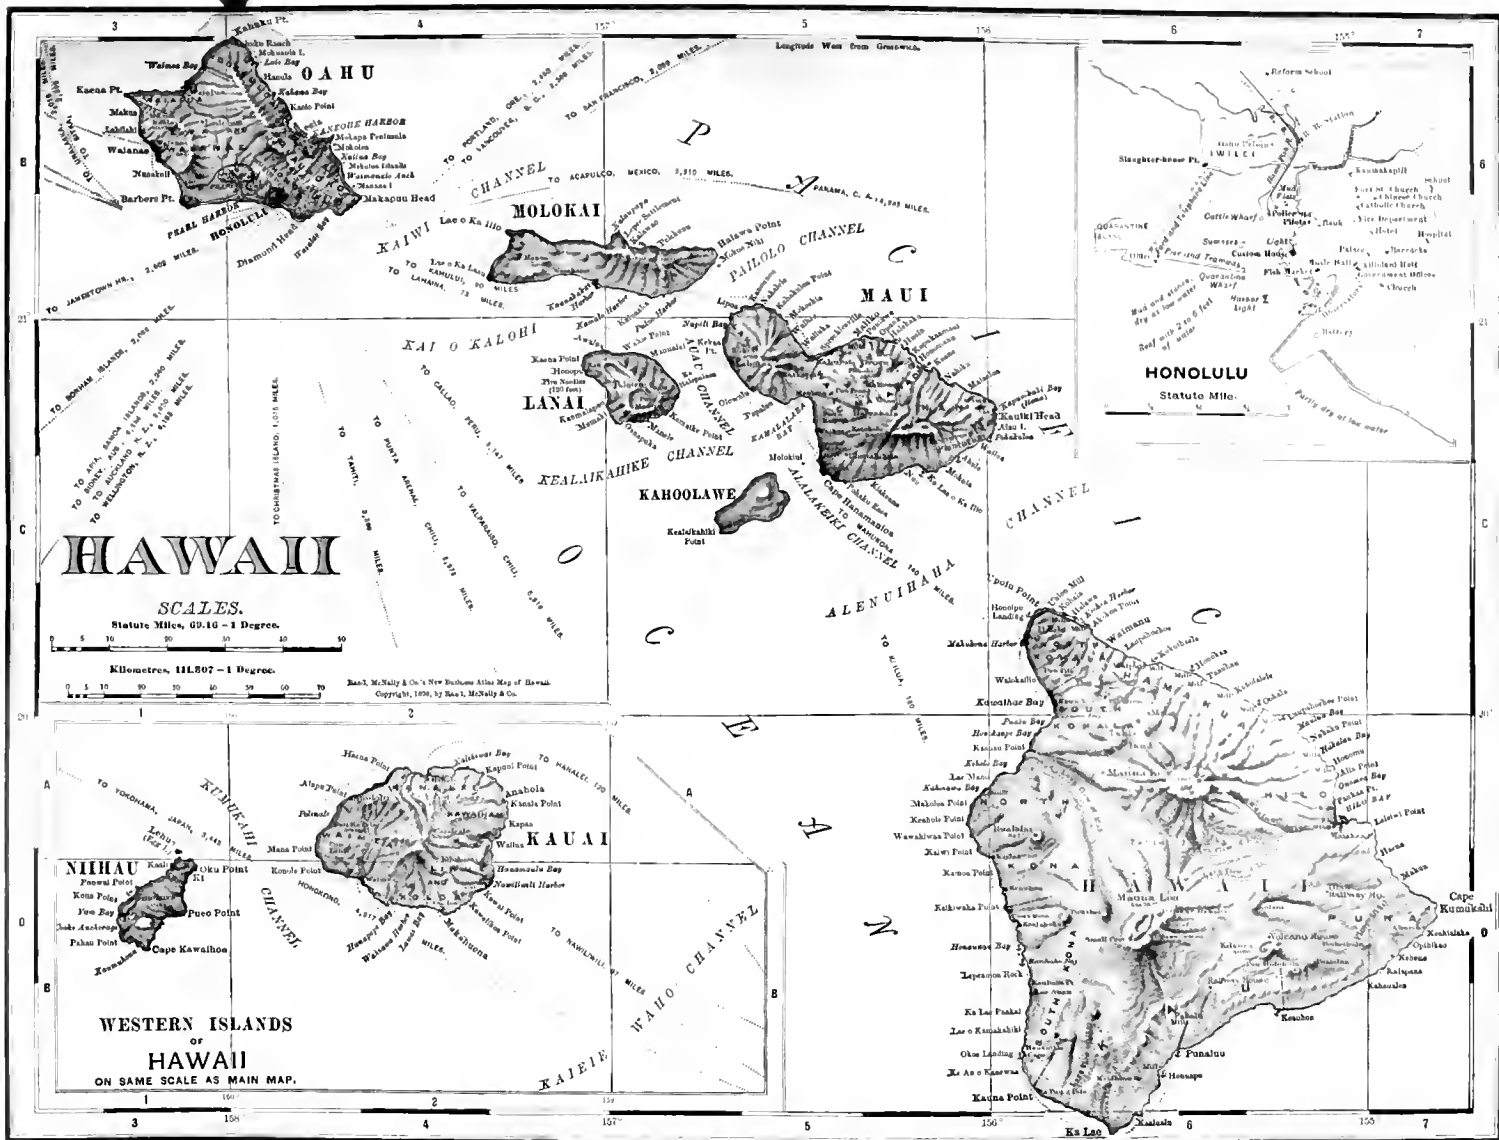

Though they prudently remained peaceful, it must have been with secret pleasure that they saw the ships sail away with their visitors on February 4th.

The joy of the islanders proved short-lived. Off Kawaihae the ship

COCOANUT ISLAND. CORAL REEFS.

Resolution sprung a foremast in buffeting a gale, and Captain Cook returned to his old anchorage to repair the damage. Carpenters were sent ashore to work upon the injured mast, when the natives treated them coldly. The king was away, but the priests remained friendly, and the sailors did not hesitate to show their authority, which further incensed the people. Some of them stole a pinnace for its iron fastenings, which so angered Captain Cook that he resolved to capture the king, who had returned, and hold him as a hostage until the stolen property had been restored. Protected by a body-guard of his marines, Cook went at once to

the home of the aged king, who, like his priests, still kept his faith with them, and enticed him to go on board the ship.

Already the natives had swarmed in the waters about the vessels, and the officer left in command ordered that a shot be fired to frighten them off. One of the shots took effect in a chief. Meanwhile the chiefs and people on the shore were protesting against the treatment accorded their king. The islanders were now armed with spears and hatchets, and so threatening did the mob become that Captain Cook advanced with all

MURDER OF CAPTAIN COOK.

From a rare old print.

haste possible. Upon reaching the beach a tall islander sprang in front of him, declaring that he had killed his brother. Thereupon Cook fired but missed him. At that moment some one from the wild rabble threw a stone, which struck Captain Cook and brought a groan from him. He now fired his second pistol, killing his man this time. But the cry of anguish coming from his lips caused one of his assailants to shout :

“ He feels pain ! He is not a god ! ”

The islanders now rushed upon the seamen so furiously that they were compelled to beat a disorderly retreat, four of their number being killed.

FOLIAGE AND FLOWERS OF THE NIGHT-BLOOMING CEREUS.

The others escaped by swimming to the boats, leaving their commander surrounded by the excited natives. He signalled to his men to stop firing and come to his assistance. At that moment a chief ran up behind him and plunged an iron dagger through his body. He fell face downward in the water, his body seized and dragged away by the infuriated mob.

Firing was resumed by the seamen, but the king called off his people and the scene became quiet. Captain Clark, now in command, as soon as he deemed it expedient, sent ashore for the body of Captain Cook, though

MONUMENT TO CAPTAIN COOK.

only a portion of his lower limbs was to be found. The incensed islanders had burned the rest, except the heart, which was eaten by some children through mistake, which gave rise to the story that the natives were cannibals.

Now that the unhappy affair was over, the people showed genuine sorrow over the untimely fate of the great navigator, whose memory is revered to this day by the Hawaiians. Captain Cook was a brave and efficient officer, doing more than all others toward enlightening the world in regard to the islands of that remote quarter of the globe; but he was quick-tempered, and possessed unbridled imperiousness, which brought him his death at

the hands of those who had gratuitously provisioned his ships, and everywhere lavished upon him the attention and worshipfulness due to a god. If carrying to the enlightened world a knowledge of their existence, these visitors were to leave with these simple people a disease which was to render sad havoc in their numbers and happiness.

The importance Captain Cook attached to his discovery of these islands is told in his own words, the last entry he made in his journal kept of that long and eventful voyage :

“ We could not but be struck with the singularity of this scene ; and perhaps there were few on board who now lamented our having failed finding a northern passage home last summer. To this disappointment we owed our having it in our power to revisit the Sandwich Islands, and to enrich our voyage with a discovery which, though last, seemed in many respects to be the most important that had hitherto been made by Europeans, throughout the extent of the Pacific Ocean.”

The memory of this great, but unfortunate, navigator is preserved by a white concrete monument, erected by some of his fellow countrymen on the spot, as nearly as could be ascertained, where he fell. It bears the following inscription :

“ In memory of the great circumnavigator, Captain James Cook, R. N., who discovered these islands on the 18th of January, 1778, A. D., and fell near this spot on the 14th of February, 1779. This Monument was erected in November, A. D. 1874, by some of his countrymen.”

Thus, while the united colonies of America were fighting their first war for independence with the mother country, a son of the latter discovered and explored those islands in the distant sea which were destined to become eventually a part of the rising republic.

SHORE NEAR HILO.

CHAPTER II.

THE ISLAND WONDERLAND.

THE last and largest island discovered by Captain Cook was called by the natives Hawaii, — meaning “Fiery Java,” and pronounced as if spelled Hah-wah-ee, accent on second syllable, — and this name has very appropriately been adopted as a designation for the entire group in place of that of the Sandwich Islands.

The coasts of these islands are often bold, rocky, and precipitous, cliffs rising for hundreds of feet perpendicularly from the water. Yet there are sheltered bays, and Oahu has one of the finest harbours in the world. There are at different places along the shores dangerous reefs, beautiful fringes of coral, or long, wide stretches of yellow beach, where the murmuring tide kissed by the trade-winds plays at hide-and-seek with harmless glee.

The larger portion of the surface of the islands is mountainous, two of the interior peaks reaching an altitude of nearly fourteen thousand feet: but at their foot lie rich alluvial plains, plateaus, and valleys, with silvery streams leaping in cascades from the overhanging cliffs. With few exceptions the mountainsides are clothed in dense growths of temperate zone

sturdiness, while the lowlands abound with a tropical vegetation of a perpetual green.

Evidence of the volcanic origin of these islands exists on every hand, from the dead and buried cones of Kauai to the living fires of Hawaii. By this it will be observed that the former, as well as being the most northerly, is the oldest of the series. This theory is supported by the fact that only two cones remain on this isle, and these on the southeastern slope. All others have been destroyed by the march of years, and their

HANALEI FALLS, KAUAI.

slopes covered with dense forests. The land having undergone longer change, is more arable, the soil deeper, and the vegetation more bountiful than on the other islands. Encircled by beaches of silvery brightness, with valleys and hillsides painted by nature's brush a green that never fades, Kauai is the "Garden Isle."

Lying in a westerly direction, about fifteen miles distant, is Niihau, resembling it in physical features. This island is sparsely settled, its inhabitants being formerly noted for the manufacture of mats made from a sort of rush which grows only on this island and Kauai, and is now the largest sheep range among the islands.

Kaula, southwest from Kauai, is a barren rock, which is the resort of innumerable aquatic birds, whose eggs are sometimes sought by the inhabitants of the windward islands.

Oahu, the following island on the southeasterly course, produces more recent and numerous indications of its volcanic formation; but here are valleys of great fertility, and a mountain range of rugged appearance. On account of its fine harbour at Honolulu, it is known as the "Mistress of the Sea."

WAIKEOLU FALLS, MAUI.

Maui, next in order, attests its younger age, having several craters, the largest and highest of which is Haleakala, "the house of the sun," which lifts its bulky crest ten thousand feet into the air, being the largest extinct volcano in the world. Maui is the "Switzerland of the Hawaiian Islands."

South of Maui, separated by a channel of only a few miles in width, is Kahoolawe, with its lowlands, except for a species of coarse grass, almost destitute of plant life. It is uninhabited, stock owners of Maui, to which island it no doubt sometime belonged, having it as pasturage for their flocks.

Between these two islands rises a rocky barrier, Molokini, used as a place for the fishermen to spread their nets.

Lanai, separated from Maui by a channel of ten miles in width, has but recently become valuable for sheep raising and sugar growing.

East-southeast of Oahu is a chain of volcanic mountains nearly equal in elevation to those of Maui, which form in the main the island of Molokai, a long, irregular ridge, with little level land and few plantations, and the unenviable reputation of being the lazaretto of exiled lepers.

The youngest and mightiest of the group is the one from which it gets its name, unfinished Hawaii, still smoking, still exhibiting to the wondering

HONOLULU HARBOUR FROM GOVERNMENT BUILDING.

beholder the sublime agency of its creation. This island is famous for its physical grandeur and volcanic exhibitions. The legends of the Hawaiians, reaching back over a thousand years, fail to mention any activity of volcanic force on the other islands. The fires of Maui's mammoth house of the sun burned out before man beheld its riven walls, while concerning the eruptions of the lower and lesser craters the ancient historian is equally silent. What a grand, yet terrible, spectacle it must have been when all the flues of these mountain furnaces were aglow with their liquid flame, which in their bombardment of the sky fairly set ablaze the moonless heavens and the eight Hawaiian seas! But if tradition fails to describe the activity of the volcanoes of the other islands, it is very vivid in its pictures of Hawaii's volcanic outbreaks. Mauna Kea (the white mountain), Mauna

Loe (the long mountain), Mauna Haulalai (offspring of the sun) at irregular intervals have each displayed their awful energies in convulsions that have rocked the island like a cradle on the deep and flung their molten contents down the slopes to the sea. A still more realistic representative of the fiery powers is the ever active Kilauea, with a crater nearly nine miles in circumference, the largest constant volcano in the world.

With a uniformity and salubrity of climate unsurpassed, the mean temperature never rising above ninety or sinking below sixty degrees, and whose southern languor is continually refreshed by the ozone breath of the polar seas; with plains and slopes of remarkable fertility covered with vast cane-fields and sugar plantations, groves of kingly palms, sturdy ironwoods, delicate tamarinds, feathery algarobas, star-eyed oranges, dusky *ohias*, snowy candlenuts, sunlit *papaïas*, umbrageous breadfruits, flowering mangoes, wine-palms, slender cocoa-palms, hardy pomegranates, twisted *luus* and wide-

HIGHEST POINT IN THE CRATER OF KILAUEA.

spreading umbrella-trees, of plants and vegetables, the fan-leaved banana, tree-like plantain, giant fern, clinging azella, nutritive yam, bulburous *taro*, crimson strawberry, and many others, the united offerings of the tropical and temperate zones growing side by side; with a flora that does not stop by decorating the rich alluvial deposits of the valleys in a bewildering array of flowers and reminders of flowers, but fringes the brinks of the chasms with the scarlet vine *u-ic* and spans the abyss with a network of gold and bronze vines tipped with trumpet-shaped blossoms, tints

the mist of the waterfalls with the rainbow hues of the *convolvuli*, or crimsons with the transparent leaves of the ohia the fiery floods of the craters; with gorgeous vines and trailers, magenta blossoms and passion flowers, embowering the homes of the many races of men living here in harmony and contentment; with a landscape clothed in a perpetual green, and mountain-tops floating like white and brown islands in cloudland; with

OHIA, HAWAIIAN APPLE.

their summer seas reflecting the azure of the southern skies; with its beaches of a dazzling whiteness fringed with cocoapalms; over all an indescribable charm of solitude and drowsy peacefulness, to him who looks for the sunny side of nature the Hawaiian Islands are the "Paradise of the Pacific," the Wonderland of the World.

In vivid contrast to Oahu's Edenic valleys and Maui's picturesque slopes rises the weather side of Hawaii, lighted by that huge lamp trimmed by no mortal hand, but kept bright against burning sun and waxing moon from time immemorial, and overlooked by the mountain monarch with foot bathed in the sea and whitened head swathed in the clouds. Every-

where the grandeur and sublimity of the scene strikes the beholder with wonder akin to awe. He gazes on the corrugated streams of congealed lava, on the broken domes of volcanoes long since burned out, on the furnace fires of Kilauea, sees with his own eyes the startling evidence of the internal powers that have builded the mountains, watches the crimson fountains play on the surface of the lake of fire and the fantastic figures dancing in ghoulish glee at their escape from the Plutonian dun-

geons of the inner earth, until he exclaims in dismay, "The Inferno of the World!"

The indigenous plants are the banana, plantain, cocoanut, breadfruit, ohia (native apple), sugar-cane, arrowroot, sweet potato, taro, strawberry, raspberry, and the sacred berry *ohelo*. The imported plants are lime, orange, mango, tamarind, papiaia, guava, and all edible products except those named above.

If prodigal in her floral gifts nature was extremely chary in her bestowal of wild and domestic creatures, and the fauna of the islands a hundred years ago was limited to dogs, swine, mice, lizards, owls, bats, snipe, plover, ducks, a species of geese peculiar to the place, and a few varieties of birds of simple song and not very brilliant plumage. It seems probable that animal life was almost entirely lacking here when first peopled by the human race.

The natives accounted for the remarkable uniformity and salubrity of the climate by the following legendary tale of the early days of the islands:

A powerful demi-god ruling over Maui, and having his dwelling on Haleakala, got angry because the sun shone every morning on the mountains of Hawaii before it did on his abode. Thereupon he caused to be made a huge net, which he carried one night and spread it quite over his rival. As a result the rising sun got entangled in the meshes of Maui's big web, which had been woven so cunningly that the harder the sun tried to break away the more his rays got mixed up in the gauze-like structure. Maui

OHÉLO.

watched the struggle with a merry twinkle in his eye, and when the sun had got tired of his futile efforts, he offered to set him free if he would promise to shine on him and Manna Loa alike, never too hot or too cold, and never allowing mist or cloud to obscure the favoured islands. The sun was fain to obtain his freedom upon such easy terms, and, agreeing to Maui's demands, received his liberty. Ever since he has bestowed his favour with wonderful equality on the seven islands, so that they have

TARO PATCH.

been blessed with their remarkable climate and temperature. Fogs or mists have never risen to mar the sun's splendour, and lest he should forget his promise and shine too fervidly on his children of the sea, he made a compact with the north wind to keep perpetual vigil over him

REPAIRS TO LANDING, NAVAL.

COCOANUT GROVE.

CHAPTER III.

A PICTURESQUE PEOPLE.

CAPTAIN COOK estimated the population of these islands to be not less than four hundred thousand, and that Hawaii alone contained considerably over one hundred thousand inhabitants.

These people were not savages, as we are apt to apply the term, but barbarians of a milder and more progressive type. In personal appearance they were generally above medium stature, well formed, with muscular limbs, frank countenance, and features often resembling the Europeans. An early writer in describing them said: "Their gait is graceful and sometimes stately. The chiefs in particular are tall and stout, and their personal appearance is so much superior to the common people that some have imagined them a distinct race. This, however, is not the fact; the great care taken of them in childhood, and their better living, have probably occasioned the difference. Their hair is black or brown, strong, and

frequently curly; their complexion is neither yellow like the Malay nor red like the American Indian, but a kind of olive and sometimes reddish brown. Their arms and other parts of the body are often tattooed, but, except in one of the islands (Kauai), this is by no means as common as in many parts of the southern sea."

They belonged to a branch of the Polynesian race, which was undoubtedly of Aryan stock, migrating at a remote period from Asia Minor through India, Sumatra, and Java to the Southern Pacific Islands, from

thence advancing slowly northward to New Zealand, Samoa, Tahiti, and Hawaii. These facts are well substantiated by the close affinity of the names of localities, men, and physical objects, with the general construction of the several languages, so that a person mastering one can easily understand the others.

HAWAIIAN CHIEF OF OLDER TIMES WITH
LEATHER HELMET.

Early accounts of the people have been preserved through an order of priesthood, which caused to be committed to memory the more prominent affairs of each family, so that handed down from father to son successively the deeds and gene-

alogies of the chiefs could be traced for over forty generations. These traditions, a picturesque background for its romantic modern history, make Hawaii a wonderland in verity. Their legends peopled the sea and sky with all sorts of weird spirits and the volcanic craters of the island world with demons of fantastic figures and terrible demeanour; they scintillated with deeds of prowess and chivalry, if wilder and more barbarous, none the less valorous than those performed by the mailed knights of the continental world: their warriors, without shields or fear of death, sprang to battle under the wings of the great white bird of

Kane, as defiantly as the rugged vikings of Northland followed the dusky ravens of Odin; their sailors, in frail craft and under the sole guidance of the sun and stars, navigated the seas for thousands of miles, and achieved conquests in far distant lands; one of their boldest mariners, in the eleventh century, reached the western shore of America, and carried back to his native isles as captives three of its inhabitants; their kings and priests were men of mighty stature, proving by their genealogies a descent from Adam and a kinship with the gods.

These sages describe a renowned chief by the name of Hawaii, a great fisherman and navigator in ancient times, who, on one of his long cruises, discovered two islands that pleased him so well he returned and brought there his wife and family. The islands he named Maui, for his wife, and Hawaii-loa for himself, and this family, the legend claims, were the first inhabitants of the islands.

While this statement is to be looked upon with suspicion, there is a very clear account of an emigration from Samoa in the sixth century under

a chief named Nanaula. This chief, after trouble with some of his relatives in regard to ruling his native isle, gathered a portion of his most adventurous followers about him; and in double canoes, large enough to hold from fifty to one hundred persons, this party, accompanied by their priests, taking with them their gods, dogs, swine, fowls, and seeds, set forth into the unknown sea on a voyage of discovery. They reached Oahu and Kauai, which they found unpeopled, and took peaceful possession. They were soon followed by a few others from Samoa and Tahiti, when immigration ceased for over four hundred years.

A YOUNG GIRL.

Then another warlike chief of Samoa, known as Nanamoa, not satisfied with fighting at home, set out on a voyage of conquest, eventually coming to the Hawaiian Islands. A long and desperate struggle with the descendants of Nanaula for a supremacy followed. Other incursions succeeded, one of which brought from Samoa Paao, a high priest, and Pili, a warlike chief, and Hawaii passed under the sovereignty of these two. Intercourse was maintained with the southern islands for one hundred and fifty years,

OUTRIGGER BOATS.

according to all accounts, an unusually active period, filled with romantic adventures, wild conquests, and perilous voyages at sea.

Isolated and environed by water, dependent to a considerable extent upon the fruits of the sea for their living, the inhabitants of the Pacific islands naturally partook of a maritime character. The Hawaiian was in his true element when disporting in the tide, or daring the dangers of old ocean in his craft with its curved prow and clumsy-looking outrigger.

The building of their seagoing craft, with the tools the mechanic had to use, required no small amount of time, skill, and perseverance. Thus the builder of a canoe became a person of great importance, and the

LANDING THROUGH THE STRAIT.

launching of his craft an event celebrated with a feast and the sacrifice of a human life.

There were several classes, as well as sizes and shapes of canoes.¹ The principal chiefs had boats from fifty to seventy-five feet in length, two feet in width, and from three to four feet in depth. The sterns were often ornamented with crude carvings of grotesque figures. The size and decorations were supposed to indicate the rank and dignity of the chief.

WAR CANOE, OLDEN TIME.

Next to these were the sacred craft of the priests, their ornaments set off with feathers. Small houses were built on these, containing the image of some god, usually in the shape of a bird, and many coloured feathers decked the place. Here the prayers for the welfare of the little fleet were offered, and offerings made to Lono, the god of the waters.

Not inferior in size, though less ornamented, were the stoutly built war canoes. With these the sterns were made lower and covered so as to afford protection from the darts and missiles of the enemy. The bottom

¹ This name seems to have originated with the natives of America, and, since the discovery of this continent by Columbus, to have been applied indiscriminately to the smaller water craft of the uncivilised races wherever found. — AUTHOR.

was round, with the upper sides narrow, and the prow curved like the neck of a swan and finished to represent the head of some bird. In order to give the rowers and sail-managers more room and security than on the narrow edges, a sort of grating made from the strong wood of the breadfruit-tree was placed over the hull. The fighting men were stationed on a platform in the forepart of the boat. Ordinarily these craft were about sixty feet in length, and capable of carrying fifty warriors.

There were single canoes built in very much the same style as the others, hewn from the trunk of some tree, with rounded sides and sharp

NATIVE BOATS.

ends. Then there were the big double canoes, made from two tree-trunks, and sometimes over a hundred feet in length.

The very largest of the canoes were made from the trees that had drifted down there from the northwest coast of America, some giant pine caught by a gale and borne thither, a present of the waves attributed by them to be a gift from the gods. One of the single-trunk canoes has been known to be over a hundred feet in length. In case of the double-trunk canoe the builders had often to wait years before a proper mate to the one coming first would be sent to their shores. The coming of such was an event of great rejoicing, and a feast followed with a sacrifice made to the gods.

The canoes always bore particular names, which designated some

COCOANUT ISLAND.

important incident connected with the craft, or some peculiar characteristic of the boat or its owner.

The navigators of those days had a certain knowledge of the heavens, and the five planets, Mercury, Mars, Venus, Jupiter, and Saturn, were known to them as "the wandering stars," while they grouped the fixed stars in constellations. They calculated the transit of the sun and fixed the equatorial line. With such understanding and a trained observation of the winds and currents, the floating debris of the deep, and the flight of birds, they were enabled to make their long, dubious voyages with comparative surety.

The social and civil condition of the ancient Hawaiians smacked more of despotism than that of any other Polynesian race. The inhabitants were divided into three classes: the nobility, consisting of the kings and chiefs of different ranks; the priests (*kahunas*), including also sorcerers and doctors; the common people (*Makaainana*), or labourers. Between the first and last existed a wide gap, which was of a sacred and religious character. The chiefs claimed descent from the gods, and were allied with invisible powers. In support of this they compared their stature and physique with the common people, which was striking proof of what they said. As late as the fifteenth and sixteenth centuries Hawaii boasted of such kings as Kila, Liloa, Umi, and Lono, each eight or nine feet in height, and correspondingly broad of shoulder and girth. Beyond these rises the gigantic figure of Kana, the son of Hina, whose height was measured by paces.

The chiefs were the sole owners of the soil, and considered not only that the land was theirs, but all which grew upon it, the fish swimming in the sea, the mine and the production of those under them. This was according to the belief that the king, of superior birth, naturally owned everything. He allowed certain portions to be held by his chiefs in trust, on the condition that they render him tribute and military support. Then these chiefs in turn divided their territory among under-chiefs, who in a smaller way paid a like return to them that they gave the king. These divisions and sub-divisions never reached to the toilers, the slaves of the soil, who did the brunt of the work, and must feel amply rewarded if privileged to live as poor tenants.

The head chief of an island was styled *mon*, and his prestige and power were usually inherited. Of so much importance was he, that when he went abroad he was attended by a body-guard, the foremost of which bore plumed staffs of bright colours. Did he go by canoe, his sails were painted red, and he was the only person who could wear the feather cloak and helmet. The common people were expected to prostrate themselves on the ground as he and his retinue passed. It was the signing of his death-warrant for a common person to remain standing at the

INTERIOR OF NATIVE HOUSE.

mention of the king's name, at the mere taking past him of the monarch's food, water, or raiment; to put on any article of dress belonging to him, to enter his presence without permission, to cross his shadow or even that of his dwelling. If a man dared to enter, after due consent from his sovereign, the latter's abode, he must crawl flat upon the ground, and depart in the same humble manner.

Lacking metals of all kinds, the early Hawaiians made their implements of war or industry from wood, bone, or stone, — axes, adzes, hammers of stone, spades of wood, knives of flint and ivory. Needles were made of thorns or bones, and spears and daggers of hardened wood. With such

tools as these they felled trees, from which they built their temples, canoes and barges, dwellings, manufactured cloth and cordage, made walls of hewn stone, built roads and fish-ponds, and tilled the soil. They wove mats, cloths, sails, and from the inner bark of the paper mulberry beat out a thin cloth called *kapa*, which they sometimes ornamented with figures and made in different colours.

They ate the flesh of nearly everything living in the sea, as well as that of swine, dogs, and fowls, yams, sweet potatoes, fruits, berries, and several kinds of seaweed, besides the staple of their foods, *poi*, a sort of fermented paste made from taro, a bulbous root very similar to an Indian turnip. They drank an intoxicating beverage made from the sweet root of the *ti* plant,¹ and a stupefying liquor from the *awa* root. They did their cooking by wrapping their food in *ti* leaves and placing it in an underground oven. Their household utensils consisted of shells, gourds, calabashes of different sizes and shapes, and platters made of wood. They lighted their homes with the oily nuts of the *ku-kui*, or candlenut-tree.

LILIUOKALANI, 1883. HEIR APPARENT.
THE ROYAL MANTLE.

The dress of the Hawaiian consisted simply of a narrow *maro* fastened around the loins for the male, a *pau* or skirt reaching from the waist to the knees for the female. These skirts were invariably made of five thicknesses of *kapa*, and when the weather was cool a short cape was thrown over the shoulders. Generally the heads of both sexes were uncovered.

Besides the *maro* the king wore on state occasions the royal mantle, the *moheo*, so called for the little bird that furnished the feathers to make it. This mantle reached from the neck to the ankle, and it took over ten thousand feathers to make it. As each bird had but two of the kind of

¹ Introduced by Buany Bay convicts at beginning of present century.

feathers desired, one under either wing, it took at least five thousand of them to afford the material for this costly garment.

The chiefs wore short capes of yellow feathers mixed with red. The colour of the priests and gods was red. The nobility had feather head-dresses, and charms of bones suspended from the neck. Some of them tattooed their faces, breast, and thighs, while flowers were the universal ornament. At festivals, feasts, and other gatherings, all wore garlands of beautiful and fragrant leaves, crowns of flowers resting on the head, and wreaths encircling the neck. This beautiful custom still prevails.

NATIVE GRASS HOUSE.

The dwellings of the common people were constructed of upright posts planted in the ground, with cross beams and rafters, roof and sides constructed of twigs woven together and filled in with a thatch of grass.

The houses of the nobility were larger, stronger, and frequently surrounded by wide verandas. These buildings were built so the main entrance faced the east, the home of *Kane*, the supreme god. These homes consisted of six separate dwellings or apartments: first, the *heiau*, or idol house; second, the *mau*, or eating-house of the males, from which the females were prohibited from entering; third, the *hale-nou*, or the house of the women, which men could not enter; fourth, the *hale-aina*,

or eating-house of the wife ; fifth, the *kua*, or wife's working-house ; sixth, the *hale-pua*, or nursery of the wife. The poorer classes followed as near as possible this plan, though they had often to use screens for partitions.

The Hawaiians enjoyed athletic sports of all kinds, running, boxing, jumping, wrestling, swimming, diving, and other games, but the two pastimes which delighted them most were *holua* and surf-riding. The former consisted of coasting on long, narrow sledges down steep descents, with

RIDING THE SURF.

the rider lying prone and borne on with the velocity of the wind. He who reached the foot first was the victor. These sportsmen did not require a snow path over which to fly on their strange sleds, but found the best race-courses over slopes covered with dried grass or over lava-floored tracks.

The goddess of the volcano, Pele, was supposed to delight in these contests, coming disguised in some earthly form. As may be imagined, she always became a dangerous rival. Kahawali, a Hawaiian prince, once raced with her when she was impersonating a beautiful young woman.

On the first trip he outdistanced her, and when she asked for a second trial, claiming that her *papa* (sled) was inferior to his, he laughed at her and started alone down the descent. Hearing wild shouts and great confusion, he saw that she was pursuing him, riding on the crest of a lava wave. In his desperation he fled for the sea, where she could not follow him. But she threw stones after him, making the water so hot he perished. To

him who doubts this tale the stones are pointed out on the beach, and the track of the lava stream is shown.

Their musical instruments were the *pahus*, or drums of different sizes, the *ole*, or bamboo flute, the *hukio*, or rude clarionet, and a few ruder instruments than even these. They had several dances, of which the *hula*, participated in by males and females, was the most popular.

In their mourning customs the Hawaiians showed their wildest nature, often resorting to the most extravagant performances, excusing all by saying that grief had so unseated their reason as to make them not responsible. The masses buried their dead in caves, but the bones of the kings were dis-

VIEW NEAR HILO.

posed of with the utmost care. There were royal burial-places at Honaunau, and on Maui at Iao valley; but not always did the remains of the kings receive sepulture at those places. On account of the fear that some one would make fish-hooks or other instruments out of them, for the charm they were supposed to give, all sorts of expedients were resorted to by faithful friends to conceal the bones.

The year was divided into twelve months of thirty days each. The days were named instead of being numbered. As their division gave but

three hundred and sixty days to the year, they consecrated to Lono, the god of the elements, the balance, so as to complete the sidereal year regulated by the Pleiades. The new year began with the winter solstice. They had the lunar month by which they regulated their feasts. The seasons were two, wet and dry. In counting they calculated by four and its multiples.

They had no written language, and their oral speech contained the

PALM GROVE.

sounds of but twelve letters, five vowels and seven consonants, as follows : a, e, i, o, u, and h, k, l, m, n, p, w. To these r, t, and b are sometimes added by writers, but the r takes the sound of l, the t of k, and b of p. A is pronounced usually as in *father* ; e as in *they* ; i as in *marine* ; o as in *mole* ; u as in *mute*. W usually has the sound of v. The only exception to these rules is when the vowel has the long or short sound. Every syllable and every word in the language ends with a vowel, and two consonants never come together. The penultimate, or next to last syllable of a word, almost invariably receives the accent. The plural takes the prefix

of *na*. In Hawaiian conversation words fall from the tongue with the musical rhythm of a brook gliding over a pebbly bottom, a consonant thrown in now and then as rocks are found in the stream, not to check the current, but to break the monotony of its flow.

In order to maintain the distinction between the classes, the nobility had a language of its own, which was not understood by the common people. This was changed from time to time that it might not be learned by any one outside of the favoured circle.

If barbarians, the Hawaiians were never cannibals. They sacrificed their prisoners of war on the altars of their gods that they might gain further victories under arms, and bathed those same graven images in the blood of their kindred to appease the imaginary wrath of their over-rulers. In this respect they did not differ from the ancient Gauls and Saxons, whose temples were crimsoned with the blood of human beings, while a father of Israel sharpened his knife to slay his son that his body might be made an offering to the offended God of Abraham.

Marriage was forbidden only between mother and son, and yet the kingly line boasted of the finest specimens of manhood and womanhood. The people were in physical bondage to the king and in mental slavery to the priesthood, and yet they were a merry, easy-going, brave, and unselfish race of men and women. Their kings were ever at war, and yet no fear of a foreign invasion reached their hearts. Surrounded by the eight Hawaiian seas they were a little world by themselves, their lives filled with deeds of knightly chivalry, incidents of love and romantic devotion unto death, and examples of unfaltering patriotism and self-sacrifice. If an impassable gulf frowned between the rulers and their subjects, each party went its way careless and contented.

Following the second period of invasion the Hawaiians enjoyed a long spell of peace and isolation, six hundred years of non-intercourse with the outside world, when in 1778 Captain Cook led the way for further conquest, such as ancient history had not told.

CHAPTER IV.

THE NAPOLEON OF THE PACIFIC.

PILTS lineal descendant Kalaniopuu was king of Hawaii at the time of Captain Cook's visit. He also held sway over part of Maui. Kahekili, "the Thunderer," a brother to the wife of Kalaniopuu, was moi of the greater part of Maui. His cousin, Kahahana, was king of Oahu, Molokai, and Lanai. Kauai and Niihau were ruled by a queen related to the royal family of Hawaii, and whose husband was a younger brother to the king of Maui. It will thus be seen that the rulers of the different islands were connected by ties of blood, though little love was lost on this account, when the frequent wars brought the bitterness of strife.

At that time Kahekili was arming to overpower Kahahana of Oahu, expecting to be assisted by Kanai's queen. Captain Cook found Kalaniopuu away fighting this same Thunderer, to avenge the death of his eight hundred nobles, the flower of his army, who had been hewn down like playthings at Hana the year before by Kahekili's doughty warriors.

STATUE OF KAMEHAMEHA I.

NATURAL ARCH AT OAHU, HAWAII.

There was then in the court of Kalaniopu'u a silent, taciturn man of forty, who was destined to end all these petty strifes in a Napoleonic conquest of the islands. He was of stalwart frame, and his courage and prowess were well known, though none dreamed of his skill and ambition as a warrior. Born at Halawa, in the Kohala district, during a turbulent period, when all the forces of Hawaii were mustering for an invasion of Maui, he was the accepted son of the king's half-brother, Keoua, though some believed he was the son of Kahekili, the Thunderer. However that might be, he was of royal blood, and what was of more importance still,

HILO BAY.

possessed the indomitable, far-seeing spirit of Kamehameha the Conqueror. This Kamehameha took an active part in the fight which resulted in the death of Captain Cook, and more than any other person remarked the great superiority of the weapons of the whites over those of his countrymen. After this unfortunate scene he retired to his estate in Kohala, and was quietly building canoes and looking after his patrimony when the aged king died in 1782. Kiwalao, the moi's oldest son, now succeeded to the kingship, with Kamehameha second in power.

Usually the death of a king was followed by a civil war, and this case was no exception to the rule. Four chiefs of Kona joined issue under Kamehameha, and a fierce battle ensued just south of Kealakekua Bay,

when Kiwalao was killed and his victor became ruler over Kona and Kohala. The rest of the island was divided among a brother and uncle of Kiwalao and Kahekili and his brother Kao.

An intense and prolonged warfare between the rival powers followed, during which Kamehameha acted a stirring part in assailing West Mani, while Kahekili and his brother Kao attacked the district of Hilo. No faction gained any decisive victory. During a lull in this savage contention, in 1786, American and European ships on their way to Canton began

NAWILIWILI, KAUAI.

to stop here for supplies, or, engaged in the fur trade on the northwest coast of America, ran down here to spend the winter, Waimea, on the island of Kauai, and Kealahou Bay being the harbours most frequented by them.

Some of the native chiefs were inclined to look with suspicion upon these visitors, and, though a brisk trade soon sprung up, to treat them treacherously. Kamehameha showed a more far-seeing policy by treating with the strangers fairly, trying to gain their confidence by offering them every hospitality at his disposal and even defending them against the faithless treatment of the other chiefs. In this way he secured the better part of the

trade, and came into possession of firearms, powder, and shot, the articles most in demand by the natives.

In 1789 a treacherous act of his enemies was the cause of giving to Kamehameha just such aid and counsel as he needed in the coming conquest. In February, 1790, an American fur-trader named Metcalf, on his way to China, with two vessels, the *Eleanor* and *Fair American*, the latter commanded by his son, a youth of twenty, anchored off Honaunua, Maui. That night, after killing its occupant, some of the natives stole a boat and stove it to pieces to get its nails.

The following morning, learning that the offenders had gone to Olowalu, Captain Metcalf proceeded thither. Arriving there during a religious festival, he waited until it was over, and then, making no mention of the wrong which had been done him, opened trade with the Hawaiians. This called a great number of canoes about the vessel, when he ordered a broadside of shot to be poured upon the unsuspecting crowd. The water was strewn with the bodies of the dead and wounded natives and the ruins of their canoes. Immediately after doing this, Captain Metcalf ran down to the Hawaiian coast, lying off Kealahakua Bay for the coming of the *Fair American*.

Meanwhile a fleet of canoes had gone out to the other ship, and under pretence of trade gained the deck. The boy captain, taken off his guard, was killed, and the slaughter of his crew quickly followed, the mate, Isaac Davis, being alone spared. The vessel was then ransacked, and taking everything that pleased them, with Davis a captive, the natives retreated from that vicinity.

On March 17th, while waiting in the hope of finding his son or some of the crew, his boatswain, John Young, while on shore was captured and carried off by the natives. Giving up all hopes of finding the lost ones, and believing Young to have been killed, Captain Metcalf went on his way. Kamehameha soon obtained possession of the muskets, cannon, and ammunition taken from the *Fair American*, and the prisoners fell into his hands. In the two foreign sailors, if he could induce them to enter his service, he foresaw valuable assistants in the work he had ahead, and he treated them with kindness and respect.

Realising that they had little hope of being found and rescued by their countrymen, and being of adventurous, ambitious natures, they soon yielded

to his overtures, to become his most able advisers and supporters in the long and arduous war to follow. They were in fact, as another has well put it, the marshals of the Hawaiian Napoleon, his Ney and MacDonald. Thus the affair connected with the two American ships, as questionable as it was on both sides, marked the beginning of a new era in the history of Hawaii.

Kamehameha lost no more time in resuming his war with the powers

IAO VALLEY.

of Maui, and that year, 1790, he defeated its defenders with terrible slaughter in the Iao valley, where it was said the dead fell so fast and thick that the waters of the Wailuku were dammed by the bodies. In his triumph here he was planning to overrun Molokai, when word came that affairs at home were getting into bad shape. The brother of his enemy defeated here had captured Hilo and was sweeping away everything before him.

Returning at once to Hawaii, he made short, if bloody, work in routing

this foe; but while he was doing it, the Thunderer and his followers rallied to regain possession of Maui. The next move in this bloody game of conquest was a sea-fight between Kamehameha and his united enemies of Hawaii. This was fought off Waimanu, and owing to the superiority of his arms Kamehameha won a decided victory. He followed this up by the

most disreputable act of his long and eventful life. Sending to Keoua to meet him in friendly conference at Kawaihae, he then caused him and his attendants to be massacred as they were trying to effect a landing. Thereupon Kamehameha proclaimed himself king of all Hawaii, and there was none to dispute his title. No doubt his enemy would have resorted to the same methods had he been able to make them successful, but it seems none the less a pity that a record otherwise remarkably bright for a heathen should have been stained with a deed like this. This was in 1791, and he celebrated his triumph by building that year a new heiau at Pukohola, offering the bodies of his cap-

WUNANO BLUFF.

tives as sacrifices to his favourite war-god.

The following year Hawaii was visited by Capt. George Vancouver, who had been with Captain Cook on his second and third voyages. Kamehameha now learned much more than his American counsellors had told him of the power and grandeur of the Christian nations, while he listened with wonder and interest to the other's teaching of justice and humanity and his description of the Christian's faith in God. Captain Vancouver

visited the island three times during 1792-94, and there is no doubt his teachings made a deep and abiding impression upon the Hawaiian king, who, if he still clung to his idols and pagan rites, showed afterward a milder spirit in all that he did.

Captain Vancouver presented him with cattle and sheep and many useful plants, but refused to let him have powder and firearms. So favourable an impression was made by this humane navigator that February 25, 1794, Kamehameha and his chiefs voluntarily placed Hawaii under the protec-

RIDING BULLOCKS.

torate of Great Britain, and the British flag was raised on the shore of Kealakekua.

This act, however, did not mean that his spirit of conquest was subdued or that his wars were over, for inside of a year we find him mustering the greatest army the island ever knew. His old enemy Kahekili, king of the leeward islands, worn out with his fighting as much as his years, left his kingdom to be divided between his son, Kalanikupule, ruler of Oahu, and his brother, Kaeo, moi of Maui. This twain straightway went to fighting over their respective domains. By the aid of a couple of English traders, Captains Brown and Gordon, then visiting at Honolulu, Kalani of Oahu defeated his rival and put him to death. Immediately he began to grow jealous of his allies, and having an ambition of his own to rule over

all of the islands, he planned to kill them and then, with the ships and a fleet of war canoes, sail to Hawaii to attack Kamehameha. He managed to murder the captains, but in such a bungling manner that the sailors escaped with the vessels, going to Hawaii direct, when they turned them over to Kamehameha with all their arms and ammunition.

This was the conqueror's opportunity, and, assisted by his marshals, he mustered over sixteen thousand warriors, and with the best equipped, as well as the largest army Hawaii had known, in the spring of 1795 set

HANALEI RIVER.

sail with his immense fleet of canoes for Maui. This island was given over to him without a battle, and then he captured Molokai in the same easy manner.

By this time Kalanikūpule had rallied his forces, ten thousand strong, and prepared to make a desperate stand in the Nuuanu Valley, near where the ice-works are now located. Kamehameha reached Waialae Bay the last of April, where he learned that one of his trusted chiefs, who had agreed to meet him there, had deserted him, and with all of his followers joined the enemy.

Nothing daunted by this, Kamehameha lost no further time in marching

against his foes, when the two armies met in that deadly grapple which was not only to decide the fates of kings but the whole future of the Hawaiian Islands. The Oahuans proved themselves true to their reputation as fighters, and there, with the cloud-swept cliffs behind, the homeland of Kaula below them, with the blue sea shimmering through the cocoanuts, and in plain sight of the thatched roofs of their grass houses, they gave their lives in heroic contest for the lost cause. Slowly pressed back toward the pali until on its brink, the survivors, rather than fall into the hands of their enemies, hurled themselves over the precipice upon the jagged rocks hundreds of feet below.

Again Kamehameha had proved himself the conqueror, and by this victory all of the Hawaiian Islands, except Kauai and Niihau, passed under his sovereignty. Kaiana, the traitor, had met death from a cannon-ball, and Kalanikupule, finding his warriors completely routed, tried to escape by flight; but he was pursued, overtaken, and captured, to be held as a sacrifice at the heiau at Moanahua.

According to custom the great victory must be celebrated with adequate ceremonies, and the grandest *hookupu* (festival during which the people made presents to the king) ever witnessed in Oahu followed. Finding that it was policy to treat their new king with as good grace as possible, the Oahuans became extremely liberal, until the offerings reached an amount and variety which astonished every one, even to Kamehameha.

THE NEEDLES, IAO VALLEY.

VIEW NEAR THE SLIDES, TAO VALLEY.

But the highest gift was reserved for the last. In the midst of the bustle and confusion, an old man, who had been among the most active and bitter of the island defenders, was seen approaching the altar, or grand stand, leading by the hand a beautiful girl, an *chu* (Hawaiian blonde), as a gift to his new king. Not over sixteen years of age, of fair skin, expressive, hazel-brown eyes, tall, perfectly molded figure, and abundant tresses of a glimmering brown mixed

CASCADEN.

with threads of gold falling like a gauze veil down the well-rounded shoulders, she was of that matchless type of beauty rarely found even when the best blood of two races blends. A skirt of yellow *kapa*, embroidered in dark designs of many birds, and rustling like folds of silk, fell from her slender waist to her knees, while her head was wreathed in yellow oo feathers, and shell bracelets encircled her small wrists. Suspended from her neck, by its three hundred braids of human hair, was the sacred Niho Palaoa, the royal insignia of the gods. Surely never

fairer bid for kingly favour was made than this of old Kavari, who hoped to propitiate his new sovereign and thus win back the fortune he had lost by opposing the iron Conqueror.

Frightened by the sight of so many intent spectators, and realising more than ever her strange position, the maid stood before the king with downcast eyes, wet with tears, and bosom rising and falling tumultuously under her great emotion.

Kamehameha the Great smiled, and he was about to address the aged

chief who came with this human gift, when there was a commotion in the ranks of his soldiers, and a young warrior, who had covered himself with glory in the battle that day, sprang forward to place himself in front of the trembling damsel.

A low murmur of horror came from the watchful crowd as the daring act was witnessed, for all knew it was death to interfere with the royal will. The dark countenance of the king grew black, and his eyes flashed furiously; but instead of ordering the young man to be put to death, as the onlookers expected, he demanded of him:

SCENE ON VOLCANO ROAD.

“What means this interference, rash youth? How dare you meddle with the sacred rights of the king?”

The warrior bowed low, but did not offer to speak.

“What name, sir?” thought Kamehameha well knew.

“Hakuole, who led the warriors of Kona on the right, my king.”

“So Hakuole, the dauntless, is tired of being a soldier, and prefers the company of women to that of his comrades in arms?”

At this humiliating question Hakuole bowed lower, and wisely held his peace, while the king ordered the girl to be led forward.

“Knowest this foolhardy young man, who chooses the companionship

of women to that of warriors?" he asked of her, who now stood bravely up before him.

"I wore his wreath at the last hula dance before the battle," she replied, modestly, "though father would not remember this."

Then it must have flashed through the mind of the astute king that behind this bold tableau was a love act, and those nearest imagined they detected a smile under the grim exterior of the Conqueror. But he spoke as sternly as ever, when he next said :

SULPHUR BANKS, VOLCANO.

"Hakuole, I command you to listen. To-day you have done that which you knew would bring you the punishment of a displeased king. You have shown yourself a brave officer, now listen to my decree. You are suspended from your official rank for thirteen moons. Go with this girl to her father's estate, which I now bestow upon her children. Away with you, and forget not the judgment of Kamehameha."

Covered with confusion at this happy and unexpected termination of the affair, the lovers beat a retreat, amid the cheers of their friends, and there is no doubt they lived to bless the name of Kamehameha, whose

KAAPENA POOL.

true character is best illustrated in the little incidents of his long and checkered career. Of course the hookupu was a great success, and the king soon won the confidence and esteem of his new subjects.

After spending a year in reorganising and strengthening his army, he set out to conquer Kauai, but the elements this time interfered with his plans, and losing many of his canoes and men in a violent tempest off the coast of the Garden Isle, he was obliged to return to Oahu. Then an insurrection on Hawaii next took his attention, and he finished his wars in putting that down, though he still dreamed of adding Kauai to his kingdom.

Kamehameha now turned from warlike to civil affairs, beginning to make many radical changes in the condition and government of the islands. He first divided the lands among his followers, after reserving a generous portion for himself, according to their rank and service. He chose governors for each island, made responsible to him, and empowered them to elect chiefs of districts, heads of villages, and all petty officers, who were held accountable through them to him. He appointed collectors of revenue, who, lacking the art of writing, kept their accounts by a method used by the British exchequer in ancient times. He had his board of advisers, who, with the governors, met with him at regular dates, the meetings being held in strict privacy.

John Young was made governor of Hawaii. In all of his selections to office the king showed remarkable judgment of men, and was seldom, if ever, deceived. So thoroughly did he master every situation and enforce the honesty of his purpose, that crime became almost unknown, and it was a common saying that "old men and children could sleep in the highways in safety." He also paid considerable attention to the industrial and agricultural interests, doing much in this way to repair the ravages of his wars.

But an evil had entered his kingdom against which he could not successfully cope. The seeds of disease and intemperance sown by foreigners had developed into a foe which no army could withstand or people combat. In 1800 some Botany Bay convicts introduced the method of distilling liquor, and drunkenness at once became very prevalent. Four years later a pestilence, believed to have been the cholera, was brought from China, and half the population of Oahu fell victims, while

elsewhere disease and death claimed their victims in overwhelming numbers. Such misery and death as the common people had never known now fell to their unhappy lot.

At this time Kamehameha had just completed his immense fleet of war canoes, called the *pelelu*, built for the purpose of invading Kauai, but the terrible disease sweeping over the islands carried off in a few days half of his army and the majority of his counsellors. The Kauai expedition had to be abandoned, never to be considered again by the sobered king, who

HONOLULU FROM PUNCHBOWL.

told his remaining soldiers to go into the fields and work. He joined them for a time, as not only disease but famine stared them in the face.

In March, 1810, Kammualii, the last king of Kauai, visited Honolulu in the American ship *Albatross*, Capt. Nathan Winship, and made a voluntary concession of his islands to Kamehameha, who very considerably allowed him to hold them in fief during his lifetime, on condition of paying tribute.

About this time and continuing during the first quarter of the century, the sandalwood trade with foreign markets sprang up. At Canton, China, in particular, this fragrant wood was in great demand for incense and the manufacture of fancy articles. While the wood lasted it was

a source of vast profit to the landholders. It was soon almost entirely removed, so it is very seldom found now.

While attending to the many details of his government with far-seeing foresight, he neglected to adopt a national flag. With a feeling of friendliness toward all foreign countries, England and the United States in particular, he thought it sufficient to fly the flags of these countries as it happened, intending, no doubt, to be fair in the matter. All went well

FORT STREET, HONOLULU.

in this way until the War of 1812 had been in progress several months. Then a Yankee privateer, putting into Honolulu, saw with amazement the British flag floating in the breeze. He demanded an explanation, when the king, to prove his friendliness, caused the stars and stripes to be run up in place of the other flag. This satisfied the American, but in a short time an English man-of-war appeared on the scene, and again the king was taken to account.

Kamehameha was now sorely puzzled, and he thought of flying both flags, until Young and Davis explained to him that two flags of hostile

countries could not fly from the same staff. He was then advised to have a flag of his own, and Young suggested that a compromise be made by taking the stars and stripes with the British cross for a field. The next day the new flag was hoisted and everybody pleased.

During 1815, under the order of Baranoff, the Russian governor of Alaska, Doctor Scheffer, visited Kanai, and urged its aged king to place himself under the protection of Russia, and even went so far as to build a fort at Waimea and hoist the colours of the empire over it. Upon learning this, Kamehameha sent word for Doctor Scheffer to leave, which he did, and the Hawaiian king raised a strong fort on the island in 1816.

This year, upon the advice of Young, a fort of stone and embrasure for cannon, with walls about twelve feet high and twenty feet thick, was built at Honolulu. It was nearly square and about three hundred and fifty feet on a side, and stood across what is now Fort Street. Prior to that time the place had been but a fishing-village, with a sandy, treeless background and a fringe of cocoanuts on the seashore. In November, 1820, the court was moved from Hawaii by Kamehameha II., and it became the seat of government for the island states.

On May 8, 1819, at the ripe age of fourscore years, Kamehameha died at Kailua, Hawaii, forbidding in his last illness the usual sacrifice of human beings at his funeral, saying, "The men should be sacred to the king," meaning his son and successor. If belonging to a barbaric race, he was no ordinary man. A shrewd, sagacious organiser and commander of armed forces, he was none the less gifted in executive ability, and he not only consolidated the islands under a strong government, but he fused a rabble of ignorant people and chieftaincies into a united kingdom, and stimulated among his subjects a patriotism which is felt to this day by their descendants.

So fearful were the ancient chiefs of Hawaii that some harm might be done their bodies after death,—that their bones be utilised for making fish-hooks or arrow points for shooting mice,—it was the invariable custom for the most faithful of the king's survivors to bear away the remains to some unknown place of sepulture, some dark recess in the volcanic mountains, or to a grave in the sea. Sometimes the ingenuity of the barbaric undertaker devised strange places or methods of concealment. Upon the death of a noted king of Oahu, some two hundred years

WATATA FALLS, ON KAUAI.

ago, the bones were stripped of the flesh, and then entrusted to a careful friend for safe interment. Instead of seeking some hidden spot in the mountains to receive them, he pulverised the bones into a fine powder, which he mixed with the poi to be eaten at the funeral feast. The repast over, and asked if he had faithfully done his work, he replied: "Safe, indeed, are the bones of Kaulii. They are hidden in a hundred living sepulchres; you have eaten them!"

AROUND KAENA POINT.

Where the bones of Kamehameha I. rest no man knows. A chief, by the name of Hoolulu, was entrusted with the sacred charge, and it is believed he secretly bore the kingly remains to a lonely hiding-place in the hills back of Kailua. Two men met him upon his return, and, being asked if they had seen any one going in the direction of the hills that morning, saved their lives by answering "No." Had their reply been different the questioner would have killed them on the spot, that they might not reveal the secret of his errand. This chief left children, and no doubt he entrusted his secret with one of them, according to custom; but in

CHAPTER V.

ANCIENT HAWAIIAN RELIGION.

ACCORDING to the Hawaiian mythology, preserved by the priests, who, at least twice during each generation, met in council to compare their historic and genealogy *meles*, that nothing might be lost or changed, a trinity of gods ruled over the heavens and earth. These were Kane, the supreme author, Ku, the designer and builder, Lono commander of the elements.

Through the *Hikapoloa*, or united efforts of the trinity, light was created from darkness, and order brought out of chaos, and three heavens were created for the dwelling-place. This done, they made the earth, sun, moon, and stars. A host of angels to administer to their wants was then created from their spittle. Man in the image of Kane was next made from red earth and the spittle of Kane, Lono bringing from the four quarters of the globe a whitish clay for the head. From one of the supreme gods was created woman.

The pair were placed in a beautiful paradise, with three rivers running through it, the waters of life, while on their banks grew inviting fruits, including the tabued breadfruit-tree and the sacred apple-tree. Legends exist telling how man partook of the forbidden fruit, etc.

BREADFRUIT.

Among the angels who had been created was one who proved the Lucifer of Hawaiian mythology, and he caused a riot in heaven, by demanding that the newly ordered man should worship him. This Kane would not allow, as angels as well as man had been the creation of the gods. Thereupon, this Kanaloa went to work to make a man after his

IEIE VINE.

own heart: that is, one who would worship him. Kane seemed to have no objection, but though Kanaloa did succeed in making a very creditable looking man, he could not endow it with life. In vain he breathed into its nostrils, and maddened by his failure, he resolved to destroy the man made by the gods. He stole into Paliuli, paradise, as a *moo* or lizard, and beguiled the original pair into committing an offence which caused Kane to expel them from the garden.

This outlawed pair had three sons, the second of whom killed the first. The Hawaiian Cain was named Laka. Ka Pili was the youngest son, whose genealogy is traced through thirteen generations

to Nuu, the Hawaiian Noah. A deluge following, Nuu built an ark, and entered it with his wife, three sons, and a male and a female of every living creature. After the deluge the ark rested on the mountain, overlooking a beautiful valley. In his gratefulness Nuu offered a sacrifice to the moon, mistaking it for Kane. That god reproved him for his mistake, but left the rainbow as a token of his forgiveness. The genealogy continues for ten generations before coming to Ku Pule, the Hawaiian Abraham, who takes

NAVAL ROW, HONOLULU HARBOUR.

HANALEI FALLS, KAUAI.

for his wife his slave woman, Ahu. Ku Pule established circumcision, and his grandson had twelve children, of whom were descended twelve tribes of men, from one of which, Menchune, came the Hawaiians.

Hawaii Loa, fourth in descent from this father of the Hawaiian Israel, set sail on the trackless sea, and, guided, by the Pleiades, eventually reached the island of Hawaii, to which he gave his name. Papa, a tabu descendant of this chief, married one Wakea beneath her in rank, and in consequence quarrels embittered their lives. Wakea basked in the smiles of the beautiful Hina, and the island of Molokai was the result of their embrace. To offset one wrong by another, Papa gave favour to Lua, and she bore the fair Oahu. Hence the names Molokai-Hina and Oahu-a-Lua.

From Wakea to the Kamehamehas fifty-six generations were told, or twenty-nine to the Maweke, who reigned in the eleventh century, when the influx from the southern islands made such changes in the religious and political situation of the islands. New gods were introduced by the high priest, Pao, the tabu enlarged and strengthened, and the priesthood made hereditary, and second only to the royal head of government.

The people were now allowed to mingle less freely in the forms of worship, and the priesthood assumed a more serious and mysterious demeanour. Kanaloa was exalted among the supreme gods, Kane, Ku, and Lono. Pele, the terrible goddess of the volcanoes, was added to the deities, and temples to her worship were erected all over the volcanic districts of Hawaii. She was the most picturesque of the Hawaiian deities. Among her sisters and brothers were Hiiaka, the heaven-rending cloud-holder; Maole, the fire-eyed canoe-breaker; Hiiaka-ka, the red-hot mountain lifting clouds; Kapohoikahiola, god of explosion; Kane-kahili, the thunder god; and as many more with as weird titles.

The gods and goddesses named did not command all of the worship of the people, for heiaus were built to the war-gods of kings, when human sacrifices were offered, and humbler temples were reared to the animals, such as the fish, shark, and lizard. Superstition everywhere abounded, sprites and fairies of every description populating the forests, and nymphs and monsters swimming in the waters. No stream or valley or point of land but had its wonderful story of supernatural deeds. The people made their own household gods, and destroyed them when they failed to

respond to their satisfaction. It was believed that the spirits of the departed remained to hover over their earthly homes, and these shades were objects of prayer.

The high priest did not have anything to do with these lower deities, the *heiau* over which he presided being dedicated to the trinity or the war-god of the king, to whom he was next in authority. Assisted by seers, and prophets grown gray in years if not in wisdom, and pretending

FERN GROWTH.

to court the favour of the gods, he was consulted on all matters of grave importance. Sometimes he had charge of the king's war-gods, when he went into the field of battle, many stories being told of such action changing the tide of conflict.

Ailments of the body were attributed to the displeasure of the gods, witchcraft, or the prayers of some *kahuna*, or witch-doctor, who had been offended. The *kahuna* called to minister to the afflicted, first sought to discover the cause of his patient's disorder, and then set himself about counteracting the spell by prayers and incantations. In this way it was

believed he sometimes succeeded in transferring the malady to the person whose anger had caused it.

The ancient Hawaiians believed that another person had the power, under certain conditions, to pray him to death. For the *kahuna* to do this it was necessary that he should possess some article belonging to the victim, such as a lock of his hair, a tooth, nail, or even some of his spittle. For this reason each king had his spittoon bearer, an office entrusted only to some faithful person.

The Hawaiian *heiau* or temple was a walled inclosure of from one to

UMBRELLA TREE, COCOANUT ISLAND.

five acres in extent, laid out in irregular form, the walls sometimes being as high as twenty feet, and ten feet thick. They were rough barriers, occasionally capped with slabs of hewn coral. Inside was a house of sacrifice, called the *luakina*, of small dimensions, and built of stone or wood. In front of this stood the *tele*, or altar, a raised stone platform. Beyond the first temple was another sacred to the priest, and within this was a small wicker enclosure called the *ama*, from whence the *kaulas*, or prophets, issued their oracles amid a scene of darkness and in a tragical tone of voice. The walls were covered with images of the principal gods, and the other and inner walls were surmounted by lines of stone and wooden idols.

Dwellings for the high priest and his associates stood near the temples, while a house for the king, when seeking consultation at the place, stood a little removed from those of the kaulas. At the entrance to the enclosure was an elevated cross, the tabu staff, and near this was a stone building, in which the victims for the altar were slain.

Human sacrifices were usually offered at the building of a heiau, and when completed they were dedicated with great pomp and ceremony, the altar heaped with human bodies.

The ordinary services at the temples consisted simply of offerings of meats and fruits, with chants and prayers, the people being allowed to join, the male portion of the inhabitants being often permitted to participate. The women were not admitted, but if denied entrance to the sacred grounds were exempt from a draft when human lives were required for sacrifice. Desiring an augury, the king would proceed alone or with his high priest to the heiau, asking of the kaulas an answer to his question. If the replies from the *amu* did not

WOOD SCENE, VOLCANO ROAD.

meet his expectations other methods were resorted to, such as the shape and movements of the clouds, pigs and fowls were opened that their intestines, believed to be the seat of thought, be examined. Previous to engaging in war, human sacrifices were generally offered, and the first prisoners taken in battle were kept for the altar. The priests numbered the victims, while the king saw that they were furnished, either from persons held for some misdemeanour or taken wherever they happened

to be found. The victims were slain with clubs, at the place mentioned, and then laid on the altar to decay.

There were also temples of refuge, called *puhonuas*, on the island of Hawaii, one of these being located at Waipoo, where the great heiau existed for many years, known as *Paa-kalani*. The gates of the puhonuas were guarded by the priests and always open. Any one who succeeded in gaining these retreats was safe from king or priest, be he chief or slave, a warrior escaping from the enemy or a criminal flying from justice. The puhonua mentioned existed until the destruction of the temples and overthrow of paganism in 1819.

It will be seen from this brief outline that the religion of the early Hawaiians was a strange compound of idolatrous forms and sacrifices founded upon the Jewish account of the creation, fall of man, revolt of Lucifer, the deluge and repopulation of the earth. One of the most important functions of this religion was the tabu, which meant restriction or denial of certain rights and privileges to

HAWAIIAN WITH MASK.

particular persons at all or different times. It was a command to do or not to do, and it implied, if not expressed, "obey or die." There were three kinds, the religious tabus, the personal or perpetual tabus, and the temporal or incidental tabus. The last was the most pernicious, as it was changeable, and less understood by the inhabitants and the most likely to be unwittingly broken. The others were well understood by the people.

No one was acknowledged the power of tabu unless he had royal lineage, that is, the blood of nobility flowing in his veins which he could prove by his genealogical record. As a distinguishing feature the king and his priesthood had different colours denoting their tabus, the first being yellow

and the last red. Thus mantles made from the feathers of the oo and mamu could be worn only by kings and princes. Capes of a mingling red and yellow were worn by the lower nobility.

The priesthood claimed everything pertaining to it as sacred, or tabu. The pig running at large but destined to be a part of the regular feast or festival was tabu, while the squid and turtle, with two or three specimens of birds, belonged only to the food of the nobility.

Women more especially than the men felt the tabu. No female was allowed to partake of the plantain, banana, or cocoanut, the flesh of swine or certain fish; under no circumstance was she permitted to eat with men.

A common tabu, proclaimed by the king's heralds, required simply that the people abandon their daily occupations and attend the services at the heiaus or temples. The religious tabus demanded that not only should work be stopped, but that no person save a priest and his assistants should leave his place of abode; all fires and lights must be extinguished; bathing for the time given up; canoeing ended; all domestic creatures confined or muzzled so as not to break the silence, which was not broken by a word spoken above a whisper. Amid this silence and sacrifice the people imagined they were pleasing the gods highly.

During these tabus notice not to enter the sacred groves, paths or bathing-places, the grounds of the temples or the royal residence was given by placing at these places or their entrances the *punloulou*, a tall pole tufted with white or black kapa. General tabus were made to please the gods or in celebration of some important event. They were common or "strict," and included more or less territory, extending in time from one to ten days.

However foolish or despotic a tabu may seem to have been, it was rarely broken, as those in power deemed it extremely dangerous to permit any laxness on the part of the people, while they considered it as a safeguard against godly wrath and vengeance.

HULA GIRLS.

CHAPTER VI.

THE LAST DEFENDERS OF THE OLD FAITH.

KAMEHAMEHA I. had died in the faith of his fathers. The Conqueror had been too busy with his wars to give heed to the waning influences of the priests; too much engrossed in strengthening the temporal powers to give serious thought to the spiritual well-being of his people. But the broken intercourse with the foreigners visiting the islands had somewhat affected the belief of the masses. They had seen these strange men openly violate the tabus and not suffer harm; they had seen them stand erect in the presence of their gods and not be stricken down. So they began to question, and to question was to doubt, the divine origin of that religious code which affected them and not others.

It was left, however, for a woman to lead in the tearing down of the old walls of barbarism, and leaving the field open to whomsoever happened to come that way. Still this was not done from the purest motives — at least not instigated from love for the people. Upon the death of Kamehameha

I., May 8, 1819, Liholiho, his son, succeeded to the kingship, with his father's favourite wife, Kaahumanu, second in authority and guardian of the realm. It was this woman who resolved to free her sex from the bondage of the tabu.

Though given prerogatives which placed her high in position and influence, she found many restrictions placed upon her actions that were irksome and hard to bear. Some of the most palatable foods were denied

NATIVES PREPARING FOOD.

her through these ancient customs; her meeting with the foreigners was marred by certain religious interdictions, in which she was being continually reminded of the inferiority of her sex. She must have been a bold, ambitious woman who could deliberately set herself about this herculean task. That she was equal to anything that she chose to undertake subsequent events proved.

She was childless herself, and having no one to turn to in that direction, she first sought the mother of the young king, Keopuolani, who was won over to her support. Then she boldly approached the prime

FERN AND FLOWER GROWTH, VOLCANO ROAD.

minister, Kalaimoku, and through him she reached the high priest, Hewahewa, who claimed descent from the renowned Pao. Though the political wife of the great conqueror, who always approached her with his face to the earth, Keopuolani was weak in her decisions and easily changed in her purpose. Whatever persuasion Kaahumahu used upon the other two, Hewahewa must have yielded from a conviction of his own. He was a thinking man, who had delved deeper than all others into this mystery

BANANA PATCH.

of pagan worship, and seen many of its absurdities. But to enter this conspiracy meant more to him than his companions. He had all to lose or gain. Supreme in his present position as the honoured head of a system as old as tradition, to take up this work meant a sacrifice of everything. A faint inkling of the new creed had come to his inquiring mind, and he firmly took his chances with the strong-minded Kaahumahu.

If the son of a conqueror, like his mother, Liholiho was a weakling. His father had so firmly established his power that wars were not looked

for, and Liholiho had spent his youth, not as his father had, in warlike practices, but in idleness and dissipation. It was this fact, realised by the late king, which had caused Kaahumanu to have been given so much voice in the rule, and, if Liholiho reigned unworthily, the power to assume entire control of the kingdom.

At the end of his season of mourning, while he tarried away from the royal palace, Kaahumanu sent the young king a message that upon his return she should set the gods at defiance by breaking the tabu. Liholiho had already learned that there was a growing sentiment against certain restrictions, and the high priest had warned him that the power of the priesthood was near its end. Trembling for the result, particularly to himself, if it should be done, he delayed his return to Kailua as long as possible.

Finally, on October 1, 1819, he set sail with a fleet of four canoes toward the royal palace, taking passage himself on the foremost and largest of the craft. Around him were his queen, his royal treasurer, and others of note and power in the kingdom. Dreading his arrival at their destination, as it was likely to bring a crisis in affairs, the worried king allowed his little fleet to move leisurely along the coast, the sails being set to catch just enough wind to keep them on their course. Carousings then began in the royal quarters, hula dancers appearing on the exciting scene, their light feet moved to music of drums and rattling of calabashes. Intoxicating liquors were passed from one to another, until such carousals were under way as had never been witnessed on the eight Hawaiian seas.

In the midst of this drunken revelry the king, not to be outdone, tossed into the water two bottles of liquor, shouting :

" Drink, Kuula ! drink, Ukanipo ! Let the water-gods be as drunk as men ! "

" Let us hope the gods may not be hopelessly offended," remarked a companion.

" Then you have not lost faith in the gods, Laami ? " asked the king.

" Never," replied the surprised attendant, and the king dared not continue the conversation.

Two days later Liholiho appeared at the feast prepared for his reception at Kailua, and the quick-eyed Kaahumanu knew that he was in the right condition to commit some flagrant act against the tabu if shrewdly managed. Once an offence committed, he would be forced to take a bold

stand in her favour. Hewahewa was still determined to carry out his part, and Keopuolani was still faithful. Accordingly the king was bantered to drink with the females of the household, and he did not refuse. Thereupon his mother ate a banana in his presence, and drank the milk of a cocoanut. This caused the desperate monarch to declare that he would openly break the tabu that day.

"At the feast?" asked Kaahumanu.

"At the feast," he replied.

"Then you will be greater than your father, and it will be the proudest day Hawaii ever knew," said the crafty schemer.

But even then the conspirators did not dare to allow the king out of their sight, until they all took their seats at the prospective tables, when Liholiho's courage began to leave him, as he gazed on the wooden images of Ku and Lono just opposite him. In a frenzy he seized a glass of liquor, which he drained at one quaff. Hewahewa, believing the critical moment had come, rose, and lifting his hands,

said in an impressive voice :

"In peace may we eat, one and all, and let our hearts return thanks to the one and only god of all."

The king listened and his sinking courage revived. Rising impetuously, he crossed over to where the women were seated at the table reserved for them, and seated himself by his mother's side. Silence now reigned on every hand, while one and all watched the king, whom they believed to be drunk. Never had the gods been so defied and the offender spared, as far as they knew. Then surprise gave place to horror and consternation, as they saw the king partake of the food prepared for the women. Some of those present hastily left the tables : others, seeing that the high priest

WINE-PALM.

seemed to sanction the kingly example, watched the scene with breathless interest.

"The tabu is broken!" some one whispered. Others took up the words, until passed from lip to lip the cry, "The tabu is broken!" The murmur swelled in volume to a shout heard beyond the pavilion, and taken up by the crowd outside, was carried to the remotest corner of Kona.

BATHING POOL, NUCAŌ VALLEY.

The royal feast over and the multitude clamorous over the late proceedings, Hewahewa capped the climax by saying:

"Seeing we have made such a bold beginning, my king, we can stop only with the death of the gods and the destruction of the heiaus!"

"So be it!" exclaimed the desperate Liholiho, who was beginning to realise what he had done. "If the gods can punish, we have done enough already to cost us our lives. Down with the gods and let the full measure of their wrath make merry our fates!"

First resigning publicly, then and there, his priestly office, Hewahewa applied the torch to the sacred temple, and the smoke arising above the smouldering ruins

of that day spread until it was wafted from Hawaii to Niuhau, until the heiaus, images, and sacred belongings of a religion more than fifteen hundred years old were ashes, and the reverential people of the island kingdom without a religion or the knowledge of a god.

If a weak king had yielded blindly to this astounding overthrow of religious principles, there were those with belief in the old faith strong enough, and with the courage of their convictions bold enough to attempt to stay the tide of events. The leader in this defence was a cousin of the

king, one Kekuaokalani, a true Kamehameha, both in physique and warlike spirit. Standing a full head above the ordinary men in height, there was not a chief in all Hawaii with a more superb figure, and he was as brave and sagacious as he was tall and handsome. Having no taste for the frivolities of the court, and there being no war for him to develop his natural energies and inclinations, he had turned his mind to the priesthood. Beginning by mastering the historic mele, he advanced step by

WAIPIO LANDING.

step, until he stood next in rank to the high priest, and the equal in every other way to the wise Hewahewa. Younger than the latter, as learned in the esoteric lore and the secret symbols of the religious code, while humane and generous, he was expected to succeed him when the other laid aside the priestly mantle. Kekuaokalani was happy in the companionship of a wife who appreciated the nobility of his character, and bestowed upon him the full wealth of her affections, as she might have worshipped a god.

This loyal supporter of the old religion was present at the feast when Liholiho violated the tabu, and he listened with dismay when the king decreed the destruction of the temples. With horror in his heart he saw Hewahewa apply the torch to the heiau where they had worshipped together, and the strong man wept, throwing himself on the ground,

WILDWOOD TANGLE ON VOLCANO ROAD.

and praying that his sight might be blasted before he should be called upon to witness another scene of such desecration.

Understanding the condition of Liholiho at the time, he found an excuse for him, but Keakuaokalani sought the high priest, believing that he must have acted under some strange power which had rendered him unaccountable for his actions. His feelings may be imagined when he found Hewahewa not only clear in mind, but with a heart in accord with what the king and he had done. In his anguish he exclaimed :

“ To think that I should have lived to hear a high priest of the blood of Pao — ”

“ I am not the high priest,” replied Hewahewa, calmly.

“ I have advised the king to that effect.”

“ Then the vacant place is mine,” said Kekuaokalani.

“ By whose appointment ? ”

“ The trinity of gods, whose temples you have turned to ashes,” answered Kekuaokalani, starting in the direction of the pavilion. Upon reaching the place he lifted from the ruins the mutilated and dishonoured image of the god Lono, and with the grim form upon his

NATIVES MAKING POL.

shoulders he marched defiantly past the king's mansion and disappeared.

During the week that followed, the work of destruction to the temples went on, with here and there mutterings against the wholesale slaughter. From these scattered and dissatisfied opposers, largely the priests who had been suddenly wrested of their fat offices, a formidable conspiracy was formed to reinstate the whole. The people might be willing to give up the tabu at the word of a capricious king, but the priesthood would not consent to see their craft robbed of its ancient glory. Idols of all sorts were snatched from the burning heiaus, and around the desecrated gods a thousand excited and maddened persons gathered to reiterate their allegiance to the old faith, and fight for it if need be.

Liholiho was inclined to treat the reports of the rebellion lightly, until Hewahewa pointed out to him that Kekuaokalani would naturally become the leader.

ON THE ROAD FROM HILO TO THE VOLCANO.

"Then take forty warriors and bring him a prisoner to Kailua," ordered the king.

"It may be tried, my king," said Hewahewa, "but not forty times forty warriors can bring Kekuaokalani here a prisoner. Let him alone: it would but excite the multitude. Without him the revolt will amount to nothing; with him it means war."

"Let him be bribed to peace, since you will have it so."

"Only one bribe can purchase Kekuaokalani."

"And that?" asked the king, hopefully.

"Must be the rebuilding of the heiaus and the restoration of the tabu."

Liholiho was silenced. However, preparations for war were begun, and a few days later the royal army, numbering nearly two thousand warriors, moved toward the district of Kaawaloa, where the rebels had made their headquarters.

As Hewahewa had predicted, Kekuaokalani had been made leader of the insurgents, and believing that he had been selected by the will of the

NEAR THE FALL.

outraged gods for their defence, he acted with such energy and enthusiasm that within a short time he found himself at the head of a force scarcely inferior to that of the king. He had good reason to believe in a fulfilment of his dreams, and with the stern incentive that sent these warriors to battle, the fate of the line of Kamehameha was seriously threatened.

A few days later the rebels met and put to rout the royal army. It was now the season of tabu, the five days between the winter solstice and the new year sacred to festivities to Lono, and at a heiau near Kaawaloa that he had saved from destruction, Kekuaokalani offered renewed sacri-

fices to the gods and prayed for final triumph. The king now made overtures of peace, which were candidly considered, but as no promise of what he was fighting for was given he sadly shook his head.

"Then," said Keopuolani, the king's mother, who had been selected for this delicate mission, with sorrow, "I must say to Liholiho that Kekuaokalani will have nothing but war?"

"Not so, honoured mother of princes," replied Kekuaokalani, in a tone of deep respect, and so impressive that the listeners were awed. "Say to Liholiho that Kekuaokalani, the last of the high priests it may be, prefers to die in defence of the gods in whose service he has devoted his life. If they are what he believes them to be, their temples will rise again; if they are not, then he wishes to hide his disappointment under the green sward."

That very night he marched his army in the direction of Kailua, and the next morning the hostile forces met at Kuamoo. Forming his men in battle

line, Kekuaokalani sent his high priest to the front with several newly made gods, and he delivered an impassioned address to his warriors, calling upon them in terms of burning eloquence to defend with their lives the gods of their fathers.

The royal army was now led by Kalaimoku, the prime minister, but so heroically did the rebels fight that the battle opened in their favour, and would doubtless have ended in the total annihilation of the king's forces

SERIES OF CASCADES.

had it not been for their superiority of weapons, having many firearms, and the assistance of some foreigners. His warriors finally breaking in a panic before the deadly fire of a battalion of musketeers, Kekuaokalani, already seriously wounded, rallied them under cover of a stone wall. Here such a desperate stand was made that again it looked so they were to gain the victory. But this situation was near the shore, and a squadron of double canoes under command of Kaahumanu appeared on the scene at the opportune moment. These warriors sent such a volley of shot from the rear that the insurgents were obliged to scatter, never to rally again. The few who managed to escape fled to the hills. Kekuaokalani, whose tall form had been everywhere present in the brunt of the fight, was struck by a stray shot, and fell with a bullet in his heart. As he expired a woman's voice rang out aboye the medley of cries, and the dead priest's wife, who had hovered near the scene and herself rendered many effective blows, sprang to his side. A bullet at that moment pierced her temple, and she dropped lifeless on the body of her husband.

The first to reach them was Kalaimoku, who said impressively, as he gazed on the noble features of the dead priest :

" Truly, since the days of Keawe, a grander Hawaiian has not lived than Kekuaokalani."

In this manner died the last defenders of the Hawaiian gods, and they sleep where they fell on the battle-field of Kuamoo. A rude monument fittingly symbolising their wild natures marks the spot, and the Hawaiian passing the place to-day bows reverently, believing that *kona*, the south wind, attunes itself to a mournful requiem for the departed ones who died so bravely for the lost cause.

GRASS HOUSE AND LUAC.

LACHALA OR SCREW PALM.

CHAPTER VII.

MISSIONARY WORK.

INCIDENTS of little moment in themselves often lead to important and wide-spread consequences. A small boy, dusky-skinned, brown-eyed, clad in scanty raiment, and a stranger in a strange land, found on the doorsteps of a resident graduate of Yale College, proved a messenger to awaken the church of New England to the condition of the inhabitants of the Sandwich Islands as no one else had. Between his sobs he told in broken language a pathetic tale of the sacrifice of parents to the rites of a pagan people, of his flight with a young brother and two friends to save themselves from a similar fate, of the capture and putting to death, before their eyes, of his little brother, of the final escape of himself and companions, who managed to conceal themselves on an American vessel, and eventually reached this country. A Mr. Dwight, who listened to this story with great interest, took the three under his charge, teaching them the English language, and in turn learning all he could of the island kingdom. This boy, Opukahaia, did not live to see his dream of freeing his

people realised, but his two friends, ten years later, at the very time the last defenders of the old religion of Hawaii were meeting their tragic fates, were among a little congregation of courageous men and women organised in Park Street Church, Boston, with the express purpose of carrying the light of Christianity to the benighted race.

This little band, besides the two young Hawaiians, Kamoree and Hopu, was composed of nineteen persons, two young graduates of Andover Theological Seminary, Hiram Bingham and Asa Thurston, Dr. Thomas

LAVA LAKE.

Holman, Samuel Ruggles, a teacher, Samuel Whitney, a mechanic, Daniel Chamberlain, a farmer, and Elisha Loomis, a printer, all with their wives, and five children belonging to Mr. and Mrs. Chamberlain. This party left Boston on the brig *Thaddeus*, October 23, 1819, and, after a six months' voyage around Cape Horn, on March 31, 1820, the snow-clad peaks of Manna Kea rose before the vision of the weary seafarers.

They were received by the foreign population of the islands with opposition, but the king granted the missionaries permission to tarry a year. Mr. Bingham, assisted by his laymen, Messrs. Loomis and Chamberlain,

began work at Oahu. Soon the printing-press of the former was running, and the first spelling-books for these people were printed. Messrs. Ruggles and Whitney went to Kauai, where a chapel and school were soon built, the king and his chiefs being among their first pupils both in the teachings of church and school. Rev. Asa Thurston and Doctor Holman, with their wives, settled at Kailua, on the island of Hawaii, which historic spot is still pointed out to the newcomer as one of great interest.

The Hawaiians were peculiarly well situated to receive the doctrines of the teachers of the new faith. They have always been, indeed, quick to grasp any form of knowledge, and the missionaries found fertile fields for their religious cultivation. The little handful of religious workers in four years found as many thousand earnest converts. Among the first to accept the new faith was the chiefess, Kapiolani, who was six feet tall and with the haughty air of the ancient nobility. Knowing better than the missionaries the depth of the superstition which still lingered in the hearts of the people, she resolved to teach them a lesson they would not soon forget. Thus she planned a visit to the crater of Kilauea, the abode of the goddess Pele, then most feared and revered by the common masses. A party of curious, excited watchers, with awed looks and trembling steps, followed her to the sacred spot.

As she drew near the dwelling of the fiery goddess, she was met by the priestess of Pele, who demanded her errand. Upon telling her object, without revealing the real motive prompting it, and quoting passages from the Scripture, she was forbidden to proceed. At the brink of the crater she was met by a missionary, Mr. Goodrich, who had caused a shelter to be built for her, where the brave chiefess passed the night. In the morning, accompanied by the missionary and several believing Hawaiians, with half a hundred doubters lingering near by, she descended into the crater to a place called the "black ledge," where she paused in sight of the seething fire. In her hand she carried a bunch of ohelo berries, held sacred to the goddess. These berries she deliberately ate in plain sight of the amazed spectators, and threw the stones into the burning lake, crying :

"Thus do I defy thee, O Pele! Jehovah is my God. He kindles these fires and he preserves me in breaking your tabus."

Then, while the awestricken beholders looked on in silence, a hymn of

praise was sung, when all knelt in humble recognition of the great creator of the universe. Kapiolani's brave act served to a considerable extent to remove the superstition, though it was impossible to destroy at once the belief of ages. It was made the occasion of a poem by Tennyson.

Other missionaries, from time to time, followed the pioneers we have mentioned, conspicuous among them being the Rev. Titus Coan, a native of the state of Connecticut, New England, who with his young wife landed at Hilo in the early part of 1835. He immediately took charge of the district on the eastern coast of Hawaii, covering a territory a

VIEW NEAR HILO.

hundred miles in length. Horses in those days were not numerous, nor had the few there been trained to domestic use, so he had to go on foot through pathless forests, or by canoe along streams winding through intricate wildernesses, often at great peril. During the first year he made a complete circuit of the island, a journey of over three hundred miles. He converted fifteen thousand persons during his lifetime.

Rev. Thomas Lyman, who had been in Hilo a few years before the arrival of Mr. Coan, lent his assistance toward establishing a station at that place, and so great and wide-spread was the revival that the natives flocked thither from all parts of the island, until their grass and banana huts clustered as thick as they could stand for a mile back from the

DIAMOND HEAD FROM THE PUNCHBOWL.

seashore. Hilo's population increased from one to ten thousand at once. This big camp-meeting continued for two years.

As neither houses nor churches had seats at that time, the seekers after the baptism were seated in long rows on the ground, facing each other, the missionary passing along between them, sprinkling their bowed heads on one side and then on the other, until he had gone the entire length, when he pronounced these words: "I now proclaim you all

DIAMOND HEAD.

baptised in the name of the Father, Son, and the Holy Ghost." This was repeated until the last row had been taken into the church. It is a pleasant fact to record that less than a quarter of a century later these same little hamlets had settled over them ministers from their own race, and neat little wooden buildings had taken the places of the grass huts and open-air churches.

A thrilling incident occurred during this protracted revival which fixed itself indelibly on the minds of the missionaries, while giving terror to the hearts of the superstitious natives. On November 7, 1837,

Mr. Coan and his colleague had preached to audiences of from five to seven thousand, four sermons as usual, and the former was just returning from the funeral of a Hawaiian child, when, without any previous warning, the placid ocean suddenly upheaved, lifting gigantic wave after wave upon the shore; these, following each other with the speed of race-horses, swept the coast for a long distance back, carrying men, women, children, dogs, houses, canoes,—in short everything movable,—off on their foaming breasts. Wildest excitement imaginable reigned, the shrieks of

TERN TELE

the hapless persons and creatures drowned by the roar of the billows. It was well then the struggling people in the embrace of the angry elements belonged to an amphibious race, or many more must have been drowned than were. Still, stout swimmers were carried far out to sea, and, in spite of the ready assistance of friends and desperate efforts to escape, quite a number were lost. The crescent-shaped sand-beach, with its fringe of palms and shady groves just beyond, the most beautiful spot on the island, was a scene of ruin and desolation. Mr. Coan, in speaking

of the awful event afterward, said that the opening crash sounded as if "a mountain had fallen on the beach."

Among those who were converted by Mr. Coan was an old man whose wife had been dead some time, and who entrusted to his care a young son. One night after his father's conversion the little boy was awakened by the tears of his aged relative falling on his face. In answer to his inquiries, he was told that the other was weeping that he must soon leave him alone in the world. Then, after this good old man had besought the love and grace of the new-found God for his child, his spirit took its flight, leaving

the crying boy alone with the silent body. The following morning kind relatives took him to live with them, and his father's remains were borne to rest in one of the cavern graves. At twelve years of age this boy for the first time listened to one of Mr. Coan's sermons, was converted, and at fifteen was preaching the gospel in his native tongue. He afterward became a student at the theological school at Honolulu, and was ordained as a minister October 3, 1888. He helped translate the gospel hymns into his native language. The name of Samuel Kapu is now well known

MORMON SETTLEMENT, LANAI.

as a benefactor among his people. This is but one of many examples of the kind.

July 7, 1827, Roman Catholic missionaries arrived at Honolulu. They were members of the "Congregation of the Sacred Hearts of Jesus and Mary." Through a misunderstanding, trouble soon arose, and the king, believing they were trying to create a division among the people, ordered them to leave the islands in January, 1832. Seven years later the French government sent a frigate to Honolulu, and compelled Kamehameha III. to allow some Catholic priests to land. Catholicism soon gained a foothold, and to-day there are not far from twenty-five thousand belonging to that church on the islands, and in 1898 sixty-two churches and chapels.

In 1862 an English Reformed Catholic mission was sent to the islands, and, meeting with favour from Kamehameha IV., who was not in as much sympathy with the Protestants as his predecessors had been, prospered, and has since attracted interest, and is regularly established.

NATIVE SHRIMP CATCHER.

The entire number of the Protestant missionaries sent to the islands, clerical and lay, with their wives, has been one hundred and fifty-six. The cost of these missions, up to 1862, was borne by the American Board of Missions, when it withdrew the financial support it had been generously giving the missionaries for forty years. Of the several religious denominations which prevail, the Congregationalists are the most numerous and powerful. Besides these there is an Episcopal, a Methodist Episcopal, and a Christian church in Honolulu, and a couple of Mormon churches. Together the Protestants have over a hundred churches and a membership of about forty thousand.

Though labouring in a field not inappropriately styled "Paradise," the early missionaries led devoted and often heroic lives. They proved to be more than the advisers and promulgators of the spiritual welfare of the natives, but became their temporal counsellors, as well as preachers, and helped to establish a civil government capable of protecting the acquired rights

of the inhabitants. Thus the term missionary in Hawaii is used in a broader sense than elsewhere in the world. The first Kamehameha laid the corner-stone of a consolidated government; his successor placed another milestone on the historic road when he abolished the tabus, tore down the temples, and burned the idols; and above these still smoking ruins the missionaries raised the finger-board of religious guidance to the people without a god, teaching them, also without lands, homes or family ties, that the homestead was the seat of prosperity and that the home was the highest kingdom on earth.

Attempts have been made to rob them of much of the credit of their work, and to ascribe selfish motives to them. That they may have erred in minor matters is true, but along the unswerving line of human progress they made a record well worthy of study. Coming of old Puritan stock, the missionaries, perhaps prematurely, made a determined effort to transplant New England ideas of civilisation upon the indolent, careless population of a clime whose every influence was antagonistic to active duties. Singularly enough, their most bitter enemies came not from the people they were working to uplift, but from those who, like themselves, were aliens in the land. Many of these were those who fattened upon the harvest of the spoils coming from that race which fell easy victims to the vices as well as converts to the virtues of civilisation. Whatever faults may be found with them,—and if man were created perfect there would be no calling for missionaries,—it is certain that a new era dawned upon the island kingdom on that March morning in 1820, when the little band of New England pilgrims landed on the shores of benighted Hawaii.

CHAPTER VIII.

THE HAWAIIAN MAGNA CHARTA.

WHATEVER may be the natural resources of a country, or however great its possibilities, its progress in education and government depends in a very considerable measure upon its political influences. This part of the history of Hawaii is a checkered one. If there have been no sanguinary wars of bloodshed, there have been stirring revolutions and many critical situations when the fate of the islands swung in the balance of a precarious power. First taught by American missionaries, and developed under the influences of New England independence, the people naturally partook of puritanical and democratic ideas of government, tempered by the prevailing atmosphere of a tropical climate.

It is the inevitable fate of a barbaric race to fall before the civilised power entering its domains. The result of civilisation to the Hawaiians, as well meant as it was, proved pathetic and tragical, bringing the desolation of empty huts and deserted villages on hillside and in valley. In a little over a century four hundred thousand simple people, strong in physique but weak in knowledge, naked but not ashamed, godless but without a fear, fell victims to greeds and vices hitherto unknown to them, until less than one-eighth of that number represented the picturesque race. Fewer feet trod each year the silvery sands of the coral-banded shores, less frequent and fainter have come their soft-spoken alohas, — national greeting, "love to you," — until it seems that the Hawaiian in a few years more will live only in the memory of the Kamehamehas and the legends of a vanished day.

Several reasons are advanced as an excuse for this decay of the people. The gravest of them has been the charge of infanticide. If that charge were true Hawaii would have been depopulated a long time ago, according to the evidence furnished. But before the advent of the white man the islands were so densely populated that artificial means had to be adopted to support the inhabitants. Ponds were built for the storing of fish, and

tracts enclosed by stone walls on the mountainsides, where families were obliged to raise more than they needed for their own consumption that they might help to feed others. Now these one-time centres of life and activity are scenes of solitude. The wild vine creeps over the crumbled wall and the unapproachable *lantana* covers the spot where the tribal circle congregated, while the hills and valleys, spanned by a line of ten thousand men who passed from hand to hand the blocks of lava stone to build one of their temples, are now overgrown by an impenetrable Hawaiian forest. The burdens of civilisation proved too heavy for the sluggish Hawaiian, and he was crushed by their weight.

A well-known missionary, in speaking of this candidly, said: "The people, like all savages, proved very susceptible to contagious diseases and the vices of civilisation. The measles, brought here from California in 1848, alone claimed one in every ten. The smallpox, which also came from California, five years later, did an equally awful work, in spite of all that could be done to prevent it. Thus, disease after disease did its dreadful part, until the leprosy, a legacy from China, added the last and most horrible chapter to the history of the doomed race."

With a greater devastation than that wrought by the epidemics, from the seeds of lust and drunkenness sown by the white men sprang a blight which completed the desolation of the field. If the Hawaiian fell an easy victim to the vices of others, whose is the blame? But it has been well

SCREW PALM OR PANDANUS.

said that he dies the easiest of any mortal. Let him but imagine he has any disease and it amounts to the same, fixed on his mind as on his constitution,—he dies! Let him think he is being prayed to death, and he sets himself about to answer the prayer. Let some malicious person but name the day of his demise, and he did not fail to respond punctually. He did it, too, in the most cheerful mood, with a song on his lips and aloha in his heart.

Still formerly, if not now, the Hawaiian lived to an age not inferior

BIRTHPLACE OF PRINCESS RUTH, HAWAII.

to ours, though the youthfulness of the features and the suppleness of the figure too speedily gave way to the wrinkled skin in the first case and the fat, squat form in the other. Until very recently it was not uncommon to meet individuals who remembered well the massacre of Captain Cook and other as well authenticated incidents in history, which would prove that in the past generation many lived to the allotted three score years and ten. Their simple mode of living, out-of-door exercise, freedom from care, the calm of their surroundings, the favourable climate, all tended, barring accidents or unnatural deeds, to give them long life and

DIAMOND HEAD.

perfect health and bodies. Given a grass hut for shelter, a pile of *laulaha* mats, calabashes or shells for dishes and cupboards, poi for food, and the Hawaiian lived and dreamed in contentment, happy, though he knew it not, to have escaped the unrest of civilisation. In the scenes to be described this continually waning influence of the native element in government should be borne in mind.

As has been shown in the religious history, a most despotic feudal system of land tenure had existed in Hawaii for centuries. The peasantry, common people, could not be said to have had any personal rights. Upon Kamehameha's conquest the most rigid application of this principle was carried out, which meant to his defeated enemies loss of all political power and wealth of lands, which was the basis of such power. At first the island of Kauai, through the successful resistance of its king, and then his diplomacy with the Conqueror, escaped this fate; but a rebellion instigated by his son being unsuccessful, the insurgent chiefs were subjected to a confiscation of their lands and the annihilation of their political power. Thus the Conqueror placed himself at the head of this ancient tenure for the entire group. This fact is borne out by the land commission in 1847, which says at opening:

WAILUA FALLS, KAUAI.

“When the islands were conquered by Kamehameha I. he followed the example of his predecessors and divided the lands among his principal warrior chiefs, retaining, however, a portion in his hands to be cultivated or managed by his own immediate servants or attendants. Each principal

chief divided his lands anew, and gave out to an inferior order of chiefs or persons of rank, by whom they were sub-divided again and again, passing through the hands of four, five, or six persons, from the king to the lowest class of tenants. All these persons were considered to have rights in the lands or productions of them. The proportions of these rights were not very clearly defined, but were, nevertheless, universally acknowledged."

Kamehameha I. lived long enough and ruled firm enough to settle the matter favourably to permanent individual rights in lands. Upon becoming king, Liholiho, as Kamehameha II., desired to make a redistri-

DATE PALM AVENUE, HOSPITAL GROUNDS.

bution according to custom, but the ambitious Kaahumahu, with the existing landed interests working for her, defeated this scheme, and the old distribution of land made by the Conqueror in 1795 remained practically unchanged, though slightly modified, until 1845, and during that period of over forty years the sovereign held a feudal authority over the entire landed estate of the kingdom, though exercised with decreasing oftenness.

In 1820 Liholiho moved his court to Honolulu, which proved a wise course of action. Anxious to broaden his ideas with those of other powers, November 27, 1823, the king and his queen went to England,

where they were courteously received; but the party was attacked with the measles and the king and queen both died. The frigate *Blonde*, commanded by Lord Byron, a cousin of the poet of that name, was commissioned to convey the remains of the unfortunate king and queen, with their retinue, to their native land. This ship reached Honolulu May 6, 1825, when the bodies of the royal couple were placed in a mausoleum, amid impressive funeral ceremonies.

Kamehameha II. having died without naming his successor, a young brother, Kāiūkeaouli, then but ten years old, was proclaimed king under

MANGOES.

the title of Kamehameha III., while Kaahumanu became regent and prime minister.

In 1826 Commodore Jones of the *Peacock* visited the islands and concluded the first treaty with the United States. The following year the first written laws were issued against theft, gambling, adultery, and murder.

June 5, 1832, Kaahumanu, who had so long been such an important person in the management of affairs, and who had so persistently clung to old traditions in some respects while seeking to destroy others, died, and was succeeded by the king's half-sister Kinau. The king's minority

was declared to be at an end in March, 1833, when he assumed the head of the government. Though but a youth of twenty, he immediately interested himself in public affairs, particularly toward the land matters. The situation of the common people was now not only defenceless, but pitiable. Under the existing condition the utterance of two Hawaiian words, *Ua mau* (thou art dispossessed), might take from hundreds of people, innocent of any greater wrong than offending a capricious land agent, their lands and homes. The king could not well escape the growing responsibility resting on his shoulders. The result was that, on the 7th

HONOLULU IN 1840.

day of June, 1839, a golden date in Hawaiian history, he proclaimed the famous Declaration of Rights, the Magna Charta of Hawaii, which made his name respected. In the words of Sanford B. Dole :

“This document, though showing in its phrases the influence of Anglo-Saxon principles of liberty, of Robert Burns, and the American Declaration of Independence, is especially interesting and impressive as the Hawaiian Magna Charta, not wrung from an unwilling sovereign by force of arms, but the free surrender of despotic logic of events, by the needs of his people, and by the principles of the new civilisation that was dawning on this land.”

THE PT SIOBOWLE.

The Declaration of Rights, which guaranteed religious liberty and formed the first step toward establishing individual ownership of land, was followed by the first written constitution on October 8, 1840. A legislature, consisting of a House of Hereditary Nobles, and Representatives to be elected by the people, was instituted, and provision made for a Supreme Court.

But, with the rights of the common people undefined, and no precedent to be the guide in carrying out the professed principles of the ownership of lands, the king was assailed on every hand by storms of disputes

GATHERING SUGAR CANE.

and abuse. The English and French consuls rivalled each other in harassing him with petty grievances generally instigated by themselves.

In 1839 the Laplace episode took place, when the French, in the hope of making an excuse to seize the whole group of islands, made unwarranted demands on the king, and as security for future good behaviour called for a deposit of \$20,000. To the chagrin of the French, American merchants furnished the requisite sum, and the oppressed king was allowed a brief respite. That year, in the rush to get possession of lands, Messrs. Ladd & Co., of the United States, the pioneers in sugar cultivation, secured a franchise which gave them the privilege to lease for a hundred years

any unoccupied lands at a low rental. These rights were transferred to a Belgian colonisation, and, though the original party remained in the company, the king found himself involved in difficulties that were thorns in Hawaiian politics for several years. The plots continuing to thicken, in 1842, the British consul, Richard Charleton, took his turn at trying to involve the island government in troubles that would give him a pretext to claim the islands in the name of Great Britain. He made demands for lands that the king considered illegal, and was refused. In the midst of this difficulty, Sir George Simpson, governor of the Hudson Bay Company's territory, arrived at the islands. He advised Kamehameha III. to send an embassy each to the United States, Great Britain, and France, to obtain, if possible, some acknowledgment of his sovereignty. Rev. William Richards, formerly an American missionary, Sir George Simpson, and a native chief named Haalilio were appointed on the first commission.

No sooner were these commissioners started than Charleton, leaving as deputy behind him a nephew of Lord Simpson, but with none of the other's honesty, departed for England. On his way home Charleton met Lord George Paulet, captain of the British frigate *Carysfort*, who listened to the consul's scheme with favour, and hastened at once to the island kingdom, to make demands he knew the besieged king could not meet. As an alternative he asked for the immediate cession of the islands, or he would declare war in the name of Great Britain and open fire on the Hawaiian capital. In this dilemma King Kamehameha issued the following pathetic proclamation :

“ Where are you, chiefs, people, and commons from my ancestors, and people from foreign lands ?

“ Hear ye ! I make known to you that I am in perplexity by reason of difficulties into which I have been brought without cause, therefore I have given away the life of our land. Hear ye ! but my rule over you, my people, and your privileges will continue, for I have hope that the life of the land will be restored when my conduct is justified.

“ Done at Honolulu, Oahu, this 25th day of February, 1843.

“ KAMEHAMEHA III.

“ KEKAULUOHII.”

On that same day Lord Paulet took formal possession of the islands, the British flag was run up, and every Hawaiian flag he could find was destroyed. An embargo was placed on every native vessel, so the news of the seizure could not be carried abroad until such a time and in such a manner as he chose, and a body of native troops was organised. For five months the little kingdom was governed by a mixed commission made up of Lord Paulet, Lieutenant Frere, Mr. James Mackay, and Dr. G. P. Judd, the latter serving but a short time.

HONOLULU HARBOUR.

Lord Paulet was exulting over the prospect to him and his confederates, as soon as his embassy should state the situation from their standpoint to the British queen. King Kamehameha and his prime minister, Princess Kekauluohi, on the other hand, had taken to the island of Maui that they might be spared meeting their humiliation face to face. But his interests were left in the hands of Dr. G. P. Judd, who proved, with the ready Yankee wit and daring of others, to be a match for the scheming Englishmen.

At the time the only creditable craft on the islands was the king's yacht *Hoikaika* (swift runner), and this had been chartered to the Ameri-

can house, Messrs. Ladd & Co., for a voyage to Mazatland and back. This craft had not started, and in order to get possession of it, so he could send his despatch-bearer to England at once, Paulet offered the Americans the privilege of sending an agent on the vessel, and also of bringing back whatever freight they wished, if they would relinquish their charter. By thus saving the whole expense of the trip, the offer was quickly accepted, without Lord Paulet dreaming of any secret purpose underneath.

The truth was Doctor Judd had seen an opportunity to communicate

VALLEY OF MAUI.

with the United States and other governments without arousing suspicion, but in a manner to outwit the plotters. This was to make of the commercial agent of Messrs. Ladd & Co. a secret ambassador of the United States and Great Britain. The American merchants were only too glad to help the unfortunate king in this venture, and a young merchant in Honolulu, named Marshall, gladly accepted the trust. Mr. Charles Brewer, a merchant in Honolulu, for whom young Marshall was working, agreed to advance the necessary funds and take his pay in firewood, the only revenue left to the king.

In order to be in readiness to start properly equipped at the word of

Lord Paulet, who was impatient, and fitting out the *Hoikaika*, which he had rechristened "Her Majesty's tender *Albert*," with all despatch possible, the Americans had to act promptly. There was no lawyer on the islands, so Mr. Marshall's credentials were copied from the credentials of John Adams as the first American minister to England and recorded in the old Blue Book. Of course certain changes had to be made to suit this case, and these papers were drawn up by Doctor Judd and another in the royal tomb at Honolulu, with a king's coffin for a table. This done, a

WAIPIO VALLEY.

trusty messenger was sent to find the king and his premier, who signed the documents at a midnight meeting on the shores of Waikiki. The king then returned to his rendezvous on Maui, while the young minister plenipotentiary to the court of St. James, under the guise of a commercial agent, went on his important errand, leaving Lord Paulet none the wiser for the secret work. The American consul at Honolulu also took advantage of the opportunity to send despatches to Washington by Marshall, apprising the American government of the situation and its true inwardness.

The effort was not in vain. The overgreedy Paulet failed to receive the support of his government, and Admiral Thomas, being sent to investi-

gate, settled the matter peacefully. The exiled king was allowed to return to his office, and on November 28th of the same year England and France, in a joint declaration, not only recognised the island kingdom as within the pale of civilised nations, but mutually agreed "never to take possession, neither directly nor under the title of protectorate, nor under any form, of any part of the territory of which they are composed." To this compact the United States declined to become a party, though acknowledging the independence of Kamehameha's kingdom.

Naturally these troubles awakened an antipathy against allowing foreigners to acquire lands, and it showed the king that he needed an organised government outside of his royal house. It was also shown that a sound and judicious code of laws was needed. In 1845, 1846, and 1847 three comprehensive acts were carried into effect. The first was "to organise the executive ministry of the Hawaiian Islands;" the second, "to organise the executive department of the Hawaiian Islands;" and the third to organise the judiciary department of the Hawaiian Islands." In 1846 the first volume of statute laws was issued.

From the councils of the above named bodies with the king and his chiefs, it was decided that the king should hold his private lands as his individual property, to descend to his heirs and successors; the balance to be divided equally between the chiefs and the common people. This division required that the chiefs who had held the land with the kings and the tenants should surrender one-third of their rights, or pay a certain sum of money. When the settlement between the king and the chiefs had been accomplished, he again divided the lands which had been surrendered to him between himself and the government, the former being known as Crown lands and the latter as Government lands.

The first *muhuk* (division of land) was made January 27, 1848. The great land reform, fully accomplished, showed great improvement in the condition of the common people. Education began to receive its deserved attention: the masses felt the first impetus of industry; the kingdom quickly assumed a more important position in the judgment of other nations; foreign immigration outside of the missionaries flocked hither, and business enterprises at once became assured successes. Kamehameha III. lived six years after the culmination of his humane plans, so that he saw the great benefits resulting from his sagacious course of action.

CHAPTER IX.

RISE OF THE REPUBLIC.

WHILE few, if any, doubted the sincerity of the king in the distribution of land, the larger percentage was retained by him and his nobles. Out of

the four million acres¹ comprising the area of the islands two million fell to him. Of this he surrendered one million to the government, thus holding one million, or one-fourth of the whole, as his own portion. The comparison in value, however, was more favourable to the common people. The lowlands adjacent to the sea, which were better adapted to raising their principal crops, taro and rice, and which rapidly rose in valuation, were allowed them, while the king and his chiefs held large tracts on the mountainsides, suitable only for hunting and pasturage, in some cases well-wooded, but often barren and worthless. Fee simple titles were given the people for building lots and lands they had actually cultivated for themselves, and known as *kuleanas* or homesteads.

TARO ROOTS.

In this distribution, as well as in the work leading to it, the missionaries had much to do, and they were now blamed by some for not getting better consideration for the masses. Others stoutly praised them

¹ More recent surveys make the actual area of the islands as four million and eight hundred thousand acres.

for having accomplished so much, and from this division of sentiment, no doubt often prejudiced, sprang two political parties destined to act important parts in the future of Hawaii, two parties, both seeking the favours of the kings, as long as the kingdom lasted, but with diverse objects: one intent on maintaining and strengthening the royal power;

the other to so mould it that the island government should eventually become an integral part of their home land, the United States.

In 1852 the constitution was formed on more liberal lines, and the representatives of the people made to be elected by universal suffrage. The following year was made memorable by the ravages of smallpox, which carried off several thousands of the native inhabitants of Oahu.

Kamehameha III. died suddenly December 15, 1854, while he was undertaking an annexation treaty with the United States. He was succeeded January 11, 1855, by his adopted son and heir, Alexander Liholiho, who

QUEEN EMMA.

was proclaimed king under the title of Kamehameha IV. This king married the chiefess Emma Rooke, a granddaughter of John Young, the Englishman who figured so prominently in Kamehameha the First's conquest, and who married a Hawaiian woman. The reign of Kamehameha IV., which lasted until his death, November 30, 1863, was comparatively uneventful. In 1857 the fort at Honolulu was demolished by order of the government, as that at Lahaina had been in 1854. The same year John

Young (Koni Ana) died. He had been *kuhina nui* (premier) since 1845. In 1859 the civil code was published, and in 1860 legal steps were taken to establish houses of prostitution, the "law to mitigate," etc., becoming a law.

Kamehameha IV. died November 30, 1863, in his thirtieth year, and his elder brother Lot became ruler as Kamehameha V. Almost the first thing this monarch did was to call a convention, May 5, 1864, to amend the constitution. August 13th the old constitution was abrogated and the 20th a new one granted by the king. One of his most important changes was to allow the right of suffrage only to those who could read and write and had some property. During his reign the Board of Education was formed, the Board of Immigration instituted, and in 1865 an act passed the Legislature to segregate the lepers. The king died suddenly December 11, 1872, the last of the line of Kamehamehas. His reign was saddened and his own end hastened by the death of his only son, Prince of Hawaii, August 27, 1862, at the age of four years. In his grief over the untimely death of his young son, and seeing the end of the Kamehameha dynasty, the king exclaimed:

"What is to become of my poor country? Queen Emma I do not trust; Lunalilo is a drunkard, and Kalakaua is a fool."

Under his rule the old-time paganism was to a considerable extent restored, and its wild revels revived. Seeking the favour of the native population, but not to the neglect of the foreign element, his influence was not always for the good of the kingdom, and his reign marked a period of much evil growth, as well as some good.

Kamehameha V. possessed more of the traits of the old chiefs than his predecessor. He had made a very good record as a government officer before coming to the throne. He had a strong will, and used it as he thought best for his people. He called able men to aid him. Unfortunately, he also leant toward the old customs.

Dying without naming a successor, this king was succeeded by his cousin, William Lunalilo, chosen by the Legislature, January 8, 1873. Lunalilo's reign was short and stormy, though the latter fact rose from no real fault of his. The enforcement of the leper law, passed under the previous administration, agitation of the ceding of Pearl Harbour to the United States in consideration of a treaty of reciprocity, with other

acts, aroused the anti-missionary party to make the claim that he was against the native inhabitants. He died of consumption February 3, 1874, in the midst of the bitter political antagonism, leaving the bulk of his estate to establish the Lunalilo Home for aged and indigent Hawaiians.

Lunalilo's successor was elected February 12, 1874, by the Legislature, which chose one who had been his rival before, David Kalakaua. The new king was a lineal descendant of Liloa, among the foremost of Hawaii's great family of warriors before the days of the Kamehameha. It was

LUNALILO HOME.

largely due, in fact, to this king's assistance that the Conqueror was successful in his conquest. Kalakaua's queen was a granddaughter of the last independent sovereign of Kauai, so the couple represented the last of two great lines of royalty. But if he was of noble birth he was of ignoble character. It was claimed that he had obtained his election over the Queen-dowager Emma by dishonest means, and his election was followed by a riot, which was put down by a body of marines from the United States ships *Tuscarora* and *Portsmouth* and U. S. ship *Tenedos*.

Kalakaua before his election had appealed to race prejudice, and now,

like Kamehameha V., seemed to consider only the interests of the native Hawaiians, and to look on foreign residents as alien invaders. Under him no foreigner could be naturalised without his consent or approval. He constantly sought to change the system of government into a personal despotism, that he might command the treasury. He filled the Legislature with pliant office-holders, and he did not hesitate to resort to any measure, however questionable, to carry his end. The Louisiana Lottery found in him a friend, and had it not been for the efforts of men of great influence, to whom he was owing money, he would have pressed the bill through the Legislature in spite of public indignation.

There was one act, however, to which he was forced to lend his acquiescence. In June, 1875, the much-talked-of treaty of commercial reciprocity between the islands and the United States was ratified, in spite of intense opposition in both countries. Going into effect in September, 1876, the result was a surprise on all sides, and from that time Hawaii dates the dawn of its prosperity. One of the stipulations of this treaty was the ceding of Pearl Harbour, situ-

KING KALAKAUA.

ated on a small river by that name seven miles from Honolulu, to the United States as a naval and coaling station. This place offers the strongest strategical points "and the finest site for a naval and coaling station in the whole Pacific," concerning which the *London Times*, in its alarm over the growing prestige of the United States in Hawaii, declared, in an appeal to Great Britain: "The maritime power that holds Pearl River, and moors its fleets there, possesses the key to the Northern Pacific."

Leaving Honolulu January 20, 1881, and returning October 27th, King Kalakaua made a tour of the world, visiting Japan, China, Siam, British India, the principal countries of Europe, and the United States.

A crisis in the government of King Kalakaua came when he accepted two bribes, aggregating over a hundred and fifty thousand dollars, in

connection with an opium license. This act was followed by the revolution of 1887. In the previous seven years the debt of the government had increased from three hundred and ninety thousand to almost two million dollars. Deserted now by his followers, and appealing in vain to other nations for assistance, the king yielded to the unanimous demands of the opponents of his system of royalty, and July 7, 1887, he signed a constitution which was a revision and improvement over that of 1864. This was framed to make the executive responsible to the people and to end personal government. Office-holders were debarred from seats in

QUEEN KAPIOLANI.

the Legislature, and nobles, instead of being appointed by the king, were to be elected by the people for a term of six years. The voters must be owners of property to the value of three thousand dollars, or have an income of six hundred dollars. Though this constitution was a rather peculiar combination of republican and monarchical ideas, engrafted on a kingly power, better results were likely to come from it than had been given the inhabitants. Smarting under the rebuke, the royal party re-

ROYAL PALACE.

sorted to an insurrection, but it was soon put down, though not without the loss of seven lives of the rioters.

The debauchery of the king was telling on him, and in November, 1890, he went to California for his health. The best medical aid failed to help him, and he died January 20, 1891, his remains being taken to Honolulu in the U. S. S. *Charleston*, arriving there the 29th of the same month. A few hours after the arrival of the body of the dead king his sister took the

ROYAL FUNERAL — KALAKAUA LYING IN STATE.

oath to support the constitution, and was officially announced as queen, with the title of Liliuokalani.

Notwithstanding the misgovernment of a dissipated and selfish-minded king, the reign of Kalakaua were the golden years of Hawaiian progress and prosperity, though paid for in the end at a high price. Naturally, the profligate management brought a collapse in business matters, the government became deeply involved in debt, and the control of public affairs largely in the hands of scheming and antagonistic politicians. The people generally understood their grave situation, but both parties looked hope-

fully forward to good results from Queen Liliuokalani. She had been reared and educated under American missionary influence, which gave those who had the interest of the struggling masses at heart reason to believe she would be their friend. Her husband was John O. Dominis, whose paternal ancestors were from Italy, but whose mother was an American woman—a native of Boston—with an English ancestry. He was governor of Maui and Hawaii, and his influence was expected to be

thrown in the interest of good government.

Unfortunately, Governor Dominis, who was made prince consort, who had been in poor health at the time of her coronation, died the following 27th of August, and was buried with royal honours. Had he lived, a different result might have been the outcome of the situation. A more far-seeing policy and firmness of purpose was required to manage affairs successfully than the queen possessed. In her desperation to raise money, instead of cutting down some of the enormous expenses in-

KING KALAKAUA.

curred, she listened to the advice of unsafe and unscrupulous counsellors, and resorted to such means as were offered by lottery managers and opium smugglers.

The Kamehamehas had, as a rule, selected their advisers from the ablest men of the different parties and races, while hers, either from mistaken judgment or evil influences, were men who seldom worked harmoniously together either for the interest of the public or her. The Legislature now held, according to the constitution of 1887, the right to

form the cabinets, with her consent, while she claimed the first rights, and the long session of 1892 was made memorable for its changes in ministries, as many as four having been selected and discharged. It was during this troublesome period that what became known as the Wilcox-Jones cabinet was formed, which, if allowed to remain, might have settled some of the threatening questions peacefully. But this was forced to give way in the midst of its efforts to another body of advisers, when the Legislature was prorogued by the queen, and the odious lottery and opium bills signed at once. From the first of these the islands were to derive great benefit by way of permanent improvements, and the latter was a license to allow in the market that article, which, with a population of over twenty thousand addicted to its use, had become a commodity dangerous to handle. It was already being smuggled into the islands against the law, and it was claimed by the supporters of the measure that it was better to attempt to regulate an evil than to make laws that would be broken.

The opposing party had strong grounds for complaint, and both bills presented grave phases.

A change in the constitution, or a new one entire, eliminating all republican ideas and tending to strengthen the monarchy, was advocated by the royalists. Drafts, varying somewhat in their essentials, were drawn up by the queen's advisers, one of which was accepted by her. Dissatisfied and at odds with the Legislature, she prorogued that body January 14, 1893, and retired to the palace with the intention of proclaiming

QUEEN LILI'UOKALANI.

the new constitution, escorted on her way by the Hawaiian society *Hui Kalaiaiaua*. A crowd had now assembled about the grounds, the queen's guard being drawn up in a line from the west gate to the steps of the palace.

The queen summoned her Cabinet to the Blue Room for their signatures to the document. But they did not come until she was worn out waiting. Then, one of them having consulted during the delay the leaders

of the opposing party, they demurred. She entreated, claiming that they had led her to the brink of the precipice to desert her at the critical moment. In their desperation, all but one fled, and he persuaded her to postpone her action for two weeks.

The queen's action declared revolutionary by her opponents, they met and chose a Committee of Safety, with the view of forming "a provisional government." Mr. John L. Stevens, the American minister, was asked to land armed troops from the war-vessel *Boston* in their defence. He refused to do this, but he did

CORRIDOR OF PALACE.

order armed men from the war-ship to protect American interests in the threatened trouble.

This action was accepted by the royalists to mean interposition on the part of the United States government, when excitement ran higher than ever.

The revolutionists now resolved to set up a new government, and on Tuesday, January 17, 1893, the leaders issued from the Government Building a proclamation which declared the Hawaiian monarchy abrogated, and ended by saying:

" 1. The Hawaiian monarchical system of government is hereby abrogated.

" 2. A provisional government for the control and management of public affairs and the protection of the public peace is hereby established, to exist until terms of union with the United States of America have been negotiated and agreed upon.

" 3. Such provisional government shall consist of an executive council of four members, who are declared to be S. B. Dole, J. A. King, P. C. Jones, W. O. Smith, who shall administer the executive departments of the government, the first named acting as president and chairman of

U. S. S. BOSTON AT HONOLULU.

such council and administering the department of foreign affairs, and the others severally administering the departments of interior, finance, and attorney-general, respectively, in the order in which they are above enumerated, according to existing Hawaiian law as far as may be consistent with this proclamation: and also of an advisory council which shall consist of fourteen members, who are hereby declared to be S. M. Damon, A. Brown, L. A. Thurston, J. F. Morgan, J. Emmeluth, H. Waterhouse, J. A. McChandless, E. D. Tenney, F. W. McChesney, F. Wilhelm, W. R. Castle, W. G. Ashley, W. C. Wilder, C. Bolte. Such advisory council shall also have general legislative authority.

"Such executive and advisory councils shall, acting jointly, have power to remove any member of either council and to fill any such vacancy.

"4. All officers under the existing government are hereby requested to continue to exercise their functions and perform the duties of the offices, with the exception of the following named persons: Queen Liliuokalani; Charles B. Wilson, *Marshal*; Samuel Parker, *Minister of Foreign Affairs*; W. H. Cornwell, *Minister of Finance*; John F. Colburn, *Minister of the Interior*; Arthur P. Peterson, *Attorney-General*, who are hereby removed from office.

EXECUTIVE BUILDING, HONOLULU.

"5. All Hawaiian laws and constitutional principles not inconsistent herewith shall continue to be in force until further order of the executive and advisory councils.

"(Signed) HENRY E. COOPER, *Chairman*."

And twelve others as the Committee of Safety, and dated Honolulu, January 17, 1893.

The overthrown queen, deserted by her ministry, and her guard quartered at the police station, had to remain inactive. At 6 p. m. the following protest was signed by her:

"I, Liliuokalani, by the grace of God and under the constitution of the Hawaiian kingdom queen, do hereby solemnly protest against any and all acts done against myself and the constitutional government of the Hawaiian kingdom by certain persons claiming to have established Provisional Government of and for this kingdom.

"That I yield to the superior force of the United States of America, whose minister plenipotentiary, his Excellency John L. Stevens, has

QUEEN'S GUARD AND BARRACKS.

caused United States troops to be landed at Honolulu, and declared that he would support the said Provisional Government.

"Now, to avoid any collision of armed forces, and perhaps the loss of life, I do, under this protest and impelled by said forces, yield my authority until such time as the Government of the United States shall, upon the facts being presented to it, undo (?) the action of its representative, and reinstate me in the authority as the constitutional sovereign of the Hawaiian Islands.

“ Done at Honolulu this seventeenth day of January, A. D. 1893.

“ (Signed) LILIUOKALANI R.

“ SAMUEL PARKER, *Minister of Foreign Affairs.*

“ WM. H. CORNWELL, *Minister of Finance.*

“ JOHN F. COLBURN, *Minister of Interior.*

“ A. P. PETERSON, *Attorney-General.*

“ (Addressed) *S. B. Dole, Esq.,* and others composing the Provisional Government of the Hawaiian Islands.”

STATION HOUSE.

The queen sent a letter to the marshal of the kingdom ordering him to deliver over everything to the Provisional Government, and the next day she retired to Washington Place. The revolution had been accomplished without resorting to arms, and the new government was duly installed. A convention was chosen that sat in Honolulu during the month of June, 1894, when a new constitution was framed, and on July 4th, a memorable date to every American purposely selected for this occasion, the Republic of Hawaii was formally announced to the political powers of the day, with Sanford B. Dole as president.

HAWAIIAN GIRLS' STYLE OF DRESSING.

In summing up the causes and results of this revolution it is easy to find reason for blame on all sides, but the weight of the evidence seems to be against the upholders of the monarchy. That the policy of the queen was short-sighted and reactionary was evident; that she was stubborn in her determination to restore certain monarchical rights is beyond question: the constitution she would have promulgated in its full intentions, as offered, would have disfranchised every white man on the islands unless the husband of a Hawaiian woman, and would have

ROYAL COLLECTION OF CURIOS.

made the property of the whites alone subject to taxation. In her extenuation it may be said that she had been driven to desperate measures by aliens who cared little for the interests of the native population, and who had no love for the monarchy however well managed. One of the most earnest of the revolutionists, four years before was defending the Hawaiian monarchy in the legislature in glowing rhetoric and denouncing those who were advocating annexation as traitors. The republic established, and not getting what he had expected, he was anxious to return to the old form of government with Kaulani as queen and himself as premier. But such examples need not be multiplied. The

Americans were naturally in favour of annexation from the beginning, and the missionaries were the moulders of Hawaiian destiny. That the greatest step had been made without bloodshed is glory enough, not only for them but for the overruled majority which accepted the inevitable so graciously.

QUEEN'S BEDROOM.

CHAPTER X.

INDUSTRIAL PROGRESS.

A HALO of romance tinges the atmosphere of Hawaiian history whither one turns. He finds it in the story of their discovery, in the traditions of their early races, in their wars and conquests, in their religious affairs, in their revolutions and growth of government, and, last but not least, in their educational and industrial progress.

If the American missionaries were teaching the masses the way to a higher civilisation, dotting the seashores, hillsides, and valleys with churches, schoolhouses, and comfortable dwellings. American business men were soon establishing enterprises of agriculture and manufacture hitherto undreamed of by the indolent, improvident Hawaiian.

PRINCE LEFIOKOKU.

As early as 1786, only eight years after their discovery by Captain Cook, Joseph Burrell, a merchant of Boston, Mass., conceived the idea of the value of trade with the islands, and a stock company was formed with a capital of fifty thousand dollars. The plan was to obtain by barter with the natives of the northwestern coast of

North America the furs and other products of that country, and from the Hawaiian Islands sandalwood, cocoanut oil, and any other product the newly discovered islands afforded. The project was reasonably successful, and the returning ships have the credit of bringing to Boston the first Hawaiian chief to visit this country. The traffic in sandalwood soon became of considerable importance, and was a source of great profit to those engaged in it. This wood, as has been mentioned, was largely

PRIVATE RESIDENCE, HAWAII.

taken to China for a market, where it was exchanged for teas, silks, and other articles from that land.

A Boston vessel, in 1803, landing at Hilo on January 23d, carried to the islands the first horse the natives had ever seen, and the animal, one of the highest prizes to their descendants, was an object of wonder to them. Others were desired, and several were sent from California, then a Spanish province, until the islands were stocked with this useful quadruped. Still it was many years before they became thoroughly domesticated and the Hawaiian came to consider himself at his best astride of one of them.

As soon as the supply of sandalwood was exhausted, a trade in pearls and pearl-shells followed, Hawaii proving by this time a ready market for cloths of several kinds, and hardware such as nails and small articles of iron.

Whale fisheries in the Pacific next attracted the attention of the thrifty Yankees, and in 1820 the ship *Mary*, commanded by Captain Allen, entered the harbour of Honolulu. This industry immediately receiving

NATIVE STYLE OF RIDING.

an impetus, other vessels soon followed, until as many as a hundred vessels would put into the harbours at this port and Lahaina, Maui, in a single season, and the furnishing of the supplies for them became the chief source of profit to the islanders. Quite a number of English whalers, and a few French, found their way to these ports. But all that these vessels brought was not desirable, for they were the means of introducing such pests as mosquitoes and scorpions, all of which thrive in this ocean paradise with wonderful vitality.

In 1823 a Boston ship named *Paragon* bore to the islands as second officer one whose name was to become connected with the ruling family

in after years. He was John Dominis, whose son, John O. Dominis, was the husband and prince consort of Queen Liliuokalani, the last of the royal rulers. Among the crew of this ship was Charles Brewer, who afterward became a prominent Hawaiian merchant, whose house is still well known both in that land and the United States.

The whale fisheries declining in 1860-1870, the energetic mind of the New Englander again turned into another channel, and the sugar industry was the result. This plant was found growing wild in every valley

GATHERING SUGAR-CANE.

visited by Cook and Vancouver, and excited the wonder and admiration of every visitor on account of its astonishing growth and remarkable sweetness. The Hawaiians had made it a common article of food and cultivated it in their simple manner. The Chinese saw something of its possibilities and attempted to make both sugar and molasses from it. Their primitive methods were succeeded in 1835 by the first successful efforts, when the American firm of Ladd & Co. obtained possession of a tract of land in the Koloa district on the island of Kauai, and in 1837 erected the first iron sugar mill seen on the group. This was a crude

affair compared to the modern machinery, and was propelled first by mules and oxen, then by water, and finally by steam power. The cane of the Hawaiian Islands was soon found to yield more per acre than in any other land in the world. Thus it became a source of great profit to the wealthy producer, and gigantic enterprises have sprung up, among which is the American Sugar Company's plantation on the fertile plains of Central Maui, said to be the largest in existence. The business requires expensive machinery, and too extensive capital for the small investor to live by it.

The coffee industry gained its supporters, and in 1845 two hundred and forty-eight pounds of this berry was exported. For years it was believed that this shrub would only grow in a small territory in the Kona district, Hawaii. But in the famous Oloa district, on the same island, large coffee plantations are being successfully managed, and the industry is fast reaching large proportions.

Rice has been raised considerably by Chinamen on the marshy lands near the seacoast, but the other races have not been successful with it.

Banana raising has become a paying industry; over a hundred thousand bunches, worth one hundred thousand dollars, are being shipped annually, and this amount might be largely increased. Though sugar, rice, coffee, and tropical fruits are the chief articles of export, it is possible to grow the products of the temperate zone on the uplands.

The rapid settlement of California between 1850 and 1860 furnished a

BANANA BLOSSOM AND FRUIT.

new market for the productions of the islands, and potatoes became a profitable crop, while wheat was successfully cultivated in the Makawao district, and a steam flouring mill was erected in Honolulu in 1854. But neither of these crops became permanent industries. During the reign of Kamehameha IV., from 1855 to 1863, little progress was made in the industrial pursuits. The cultivation of wheat was finally given up, and

G. A. R. SECTION IN CEMETERY, HONOLULU.

that of coffee for a time abandoned, though in 1860 the culture of rice was begun with considerable success.

The period of the war of the great Rebellion was one of the most critical to American interests. The tide of sentiment turned toward Great Britain, which through its astute diplomacy won the confidence of the king and queen, the first being then Kamehameha V. Already the English government had realised the coming importance of Hawaii as an ocean stronghold, and the possibilities of its agricultural industries. It was seen that rice, cotton, coffee, and sugar-cane could be raised to advantage. The beauties of the climate were also beginning to attract people hither, so that its pop-

353. MOANALUA VALLEY—SHOWING RICE FIELDS

ulation was increasing faster than ever. Minister McBride explains the situation in the following words: "I beg leave further to say that American interests greatly predominate here over all others combined, and not less than four-fifths of the commerce connected with these islands is American. The merchants, traders, dealers of all kinds, and planters are principally Americans. The English have no commerce here worthy of

SUGAR MILL.

the name, and but one or two retail stores; the Germans, about the same amount of business as the English. Many American merchants here are doing quite a large business, and would extend their business still more but for the danger of British rule over the group, which if it should become the dominant or governing power, American interests would be crushed out with eagerness and despatch." This report was made in 1863, and it will be seen that American interest lost very little if any vitality.

The treaty of commercial reciprocity with the United States in 1875, by which sugar in all its states and several other articles were admitted there free, gave an unprecedented growth to industry in all branches, and an

intoxicating increase in wealth followed. Men seemed to go wild over the prospects, and in the lack of cheap labour to help develop enterprises as fast as they wanted to, the importation of low-priced labour succeeded with startling rapidity, as will be shown in the chapters devoted to the Japanese and Chinese in the islands. The valuation of property advanced, but the price of labour suffered from the great influx from abroad. Less than one-tenth of the help were natives. The proportion of the immigrants procured for contract labour was twenty-five women to one hundred men as a rule, and from the lowest and most ignorant classes of foreigners.

RICE FIELDS, HANALEI.

But this headlong rush has been checked, and Hawaii is rapidly recovering from the shock, with the brightest prospects for the future. The islands which are foremost in industrial interests are Hawaii, with its great varieties of soil and climate, affording numerous sugar plantations and coffee lands; Maui, following in the same line; Oahu, with its rich sugar and rice lands, and the finest harbour in the Pacific; Kauai, for its well watered slopes and luxuriant vegetation the "Garden Island," largely devoted to sugar cultivation and rice growing.

Still the industries of Hawaii are only in their infancy. Less than one-fourth of the land which can be cultivated is now under improvement, and

scarcely one-tenth of the grazing land is used. It is estimated that under ordinary management the islands can be made to afford homes for a population of half a million of agriculturists. As fine wool can be grown here as in Australia. The exports for 1898, made principally to the United States, reached over ten million dollars. These can be increased ten times. Its present income is almost one million and eight hundred dollars. Should manufacturing enterprises be started here, which is quite likely at an early

KINDERGARTEN, FORMER HOME OF QUEEN EMMA.

date, the future will show it to be one of the richest spots on earth. All this without saying a word as to its possibilities as a health and pleasure resort, for which it is so admirably adapted.

A glance at its educational institutions show that these have kept abreast of the agricultural interests. Schools were begun and houses built soon after the arrival of the missionaries, and as early as 1831 a high school was established at Lahaina. In 1836 Mr. Lyman opened a high school at Hilo, and the same year the female seminary at Wailuku, Maui, was commenced. In August, 1838, the chiefs commenced the study of

political economy under the instruction of Mr. William Richards, and May 10th, the following year, the first edition of the Hawaiian Bible was finished. A year later a school for young chiefs, Mr. and Mrs. Cooke, teachers, was opened at Honolulu, and May 21, 1841, the school for missionaries' children was begun at Punahou, now Oahu College. New schools have been established from time to time, until there is no district, however remote, which does not have its school.

The system is that of free public schools similar to the plan of the

STEAMERS PLYING BETWEEN THE ISLANDS.

United States, from where many of the teachers come. The text-books are uniform, and can be bought as cheap as in the latter country. Those native born, or born on the island of foreign parents, are compelled to attend school by law. The only people who cannot read and write are among those who have come from abroad. The schools are non-sectarian, and besides the common school system there are opportunities for getting a higher education, such as the grammar grade of the United States affords, while at Honolulu a high school and collegiate course can be obtained. Instruction in the common schools is conducted in the English language.

There are papers published in the Hawaiian, Portuguese, Japanese, and Chinese languages, besides several in the English language. Honolulu has three evening dailies, one morning daily, and two weeklies, besides monthly magazines. Some of the latter are finely illustrated.

The islands have regular communication with San Francisco, once a month with British Columbia, and twice a month with Australia and New Zealand. Steamers also ply between Honolulu and Japan and China. Intercourse between the islands is by steamers, which are constantly plying between the different ports, giving frequent communications to and from the capital. There are three public railroads, and more contemplated, besides several plantations, each operating ten to thirty miles of track. Since annexation, the steam traffic has greatly increased.

HONOLULU RAILWAY STATION.

All of the principal islands have a regular postal system, so that on the arrival of a steamer at any main point, mail carriers are ready to distribute the mail through all parts of the district. On Oahu, Hawaii, and Kanai telephone connections are found at every important place, and Maui is beginning to have its line. The islands are in a direct course from San Francisco to the Philippines, being about one-third of the distance, and, though over two thousand miles from the nearest point of mainland, in these days of rapid ocean transit are not so lonely in their situation as might at first seem. Under the changed condition of affairs the native has become a trusted and valued citizen. History in no other land shows such a rapid advance from paganism to respectable civilisation, from indolence to a good degree of progress, as the descendants of the followers of Kamehameha.

CHAPTER XI.

THE JAPANESE AND CONTRACT LABOUR IN HAWAII.

THE Japanese and Chinese now comprise over forty per cent. of the population of the Hawaiian Islands, and are already more than half of the male inhabitants. This situation becomes more striking when it is realised that the former have more than doubled in number during the last seven years. This influx has been due largely to the influence of the sugar planters, who have looked to the home land of these races for cheap labour with which to carry on their industry.

Naturally these Asiatic elements are beginning to be felt. Of all the foreign immigrants to Hawaii the Japanese have excited the most talk, if not real concern, as to the dangerous outcome of the rapid increase of this race on the islands. Since the annexation of the islands to the United States the situation has been modified somewhat, but the grave fact remains that the Oriental element is still a power in the island territory. In 1894 Admiral Walker, who was in command of the American navy in these waters, said: "They (the Japanese) are inclined to be turbulent; they stand together as a solid body, and their leaders are said to have political ambitions, and propose to claim for their free men the right to vote under the conditions with which that right is granted to other foreigners. They are a brave people, with military instincts, and would fight if aroused to violence."

Japan is the England of the East. Admiral Ammen, in 1896, wrote a letter to the Congressional committee: "It does not require a prophet to foresee that those islands in the near future will be either American or Japanese." This Oriental power, still in its infancy, had then a larger naval force in that vicinity than the United States. But there were other reasons than a desire to possess the islands which prompted Japan to its watchfulness and jealousy over the country. That was the Hawaiian-Japan treaty relative to Japanese immigration.

Early in the sugar industry Japanese labour was sought to help in

raising of cane and manufacture of sugar. A treaty was made with Japan which should give that country a certain sum for every man or woman permitted to come to Hawaii, and a strict account was kept of each labourer furnished. Upon their arrival in Honolulu those desiring help were permitted to select their labourers and take them to their plantations. Each man was allowed from twelve to fifteen dollars a month, and each woman thirteen, a house to live in, fuel, free water and medical attendance. This system gave rise to spirited opposition, and has been compared to slavery as it existed in the Southern States of America before the great

JAPANESE VILLAGE NEAR HILO.

Rebellion, though there was scarcely a point of resemblance between the two systems. But there was this to be said in its favour: The labourer was allowed to return to his country at the end of three years, and while here he was not to be separated from his family. Neither was the planter upheld in resorting to violence, and was liable to a fine for assault. Living largely upon rice raised by himself, and under the favourable condition of the climate, the labourer could lay by a modest sum each year if he chose. The Japanese consulate at Honolulu received his savings at the rate of four per cent. interest. Frugal and temperate in their habits, the Japanese could save a part of his salary to take home, or to help him to found a home in this country if he decided to remain, and thus many of

them were only too glad to improve the opportunity. But there was a clause in this treaty which soon fomented trouble, began to mobilise Hawaii with a troublesome people, and led to a collision with Japan.

The treaty provided that Hawaii could not prevent Japanese from coming to the islands as free immigrants in any numbers that they chose, and Oriental immigration increased with startling rapidity. In 1896 they came at the rate of a thousand a month, and the adult males of that nationality outnumbered any other race of immigrants. The result could be readily anticipated unless some restriction was made by the government.

JAPANESE, HAWAII.

This was done, when the Japanese government remonstrated, and the planters complained that they could find no labourer to take the place of the wiry, active, progressive Japanese. The Portuguese, considered the superior of any foreign labourer, would not come in sufficient numbers, other Europeans, and Americans failed to do so, and the Hawaiian already there refused to do it. While but a few Japanese on the islands could read or write English or Hawaiian, a qualification necessary to obtain the right of suffrage, the Americans became alarmed lest Hawaii become a Japanese colony and under their control.

The first measure to check this increase of them was made in 1895 by the immigration committee, which issued an order obliging planters to

WAIANAE COFFEE PLANTATION, OAHU.

import two-thirds of their contract labour from China or some other country except Japan. This aroused Japan, and a sharp controversy followed when the Hawaii authorities refused, on technical grounds, to allow two cargoes of immigrants to land. Free labourers were entitled to enter Hawaii without any preliminary action of the authorities, but it was stipulated that they should possess fifty dollars. A thousand of the newcomers had written agreements from the Japanese Immigration Company that in consideration of twelve yen they were to be returned to Japan, providing labour could not be secured for them. This made them, the Hawaiian committee claimed, not free labourers, but contract labourers not agreeing with the intention of the treaty. Then, when the immigrants showed each fifty dollars, which was intended to make them appear as free immigrants, it was held that these sums had been loaned them by the society for the object of evading the law. The Hawaiian authorities were firm and Japan took home her immigrants, and instead of

CANE FIELD, WAIANAE.

sending more at the time, despatched a war-ship to the islands. Learning of this intended movement, the United States sent the cruiser *Philadelphia* to Honolulu, which was in the harbour when the Japanese vessel, *Naniwa*, arrived on May 5, 1897.

Japan acknowledged the predominant interest of the United States in Hawaii, but claimed that its own interests there demanded careful and watchful attention. Then Hawaii offered to arbitrate the immigration question, and Japan agreeing in July, the following September immigration of free labourers from that country was resumed. This time the Japanese

government was careful that the regulations of the treaty were fully complied with and Hawaii was obliged to continue to accept the influx of this people. It may be well to say here that the matter of the previous trouble was satisfactorily settled before the annexation of the island republic to the United States.

There are many educated and intelligent Japanese on the islands, who are prominent in business and have thrifty homes, but the class most largely drawn hither is ignorant, impetuous, and hard to control. If industrious, they are ambitious, and, seeing better than the Chinese the real

JAPANESE HOUSES.

inwardness of their situation, are dissatisfied with it, waiting, watching for the opportunity to strike a blow at the power which attempts to hold them in check. There is too much of the Yankee about them to be held long in surveillance, and, with their high percentage of population, what the outcome is to be is hard to forecast, though probably no cause for serious alarm.

While there is a great difference between the condition of these "slaves of Hawaii" and those of the old regime of the South, plantation life in the islands is much the same as that was in the slave States of America before 1861. The common visitor sees only the surface. The vast estate is conducted in a patriarchal manner; the big house occupied by the high-

salaried manager, set with wide verandas and embowered in flowers, stands where it can command the best view of the situation. In the distance are collections of the flat, plain houses of the labourers. The Japanese are usually nearest; they have picked up Occidental ways so rapidly they like to be near their masters; and these like to have them as closely under their eyes as possible, knowing the volcano of discontent rages under the calm surface and is liable to break forth at any moment without warning. The coolies, less mindful of their future, are not as dangerous. Their houses are perhaps a mile or even two miles farther up the mountainside. There is nothing striking about these villages, except the painful uniformity of the dwellings, possessing no ornaments and few comforts, other than the little plot of cultivated ground around them.

Next to the broad acres of rank cane rustling in the breeze are the mills where the giant plants are sent down the water-flume in a furious passage, until torn, and crushed into a shapeless

JAPANESE WOMAN.

mass which is dropped at the foot of the sluice. But it is not left here to rest long, before it is taken through the different stages of crushing and pressing, purifying, until the black, sticky, ill-smelling syrup comes out in a beautiful golden tint, pure and delicious, the perfection of sugar. Everywhere the machinery is tended by Japanese, even to the last act in the shifting scene, where the sugar bags are sewed together by the deft fingers of a little Japanese woman in a *holoku*. In spite of the grinding competition in the sugar business, through the industry of this army of lean, brown, active toilers, it has been made to yield in the aggregate

great profit here in Hawaii. But for this and for them, without a voice in their management, the history of the islands must have been told with far different results.

The plantation store is an important feature in the scene, for through that the money of the labourer largely finds its way back to the power controlling this mass of workers. The prices here are usually high, but the buyer is helpless. So the wheel turns, crushing not only the cane but a human grist. It is true many of these labourers are of the lowest class, — criminals it may be, — the refuse of an inferior humanity brought to-

JAPANESE HOUSES.

gether promiscuously. Riots and outbreaks are not common. It requires a stern, strong overseer to hold in control such a gang, and doubtless there are those who take advantage of their position to abuse those who are powerless to help themselves.

If they attempt to desert, the only way for them to escape from their bondage, the police force of the island is ready to hunt them down. When captured, as they usually are, they are sometimes sent to the hot "reef" to work until they are glad to get back to the cooler cane-field.

The worst of the situation is the common herding of the labourers — male and female — much as a drove of cattle would be driven into their pen. In the great yard of the station every morning, at one of these plantations,

hundreds of Japanese men and women can be seen marching sullenly to the fields. At midday this little army returns to the quarantined men and women who have prepared their simple meal of rice, boiled turnips, and meat, their daily fare. They lodge, as they eat, promiscuously. In a big, poorly ventilated room they have their bunks or wide, bare beds, where as many as half a dozen sleep together. It can be truthfully said of them that few if any have seen better days, but under the sun of American civilisation it is to be hoped a new day will soon dawn for the unfortunate race. A new treaty with Japan, which went into effect in 1899, allows the United States to regulate the immigration of Japanese labourers. They are now free to come from Hawaii to this country, but as yet none have shown a disposition to do so.

There is a Japanese Methodist Episcopal church founded by Rev. H. Kihara, a native of Japan, who was converted in California, who then came to Hawaii. His membership consists of about eighty of his own people, but who are poor.

KUKUI TREES.

CHAPTER XII.

THE CHINESE IN PARADISE.

PREJUDICED as the average American is against the Oriental races, it is not easy for him to realise the different standing and importance of the Chinese in Hawaii to that of his own country. Unlike the clannish and ignorant inhabitants of Chinatown, San Francisco, or of

PUBLIC LIBRARY, HONOLULU.

any of the continental cities, in a climate suited to his nature and under influences tending to develop his better elements, the Chinaman in Hawaii is really a useful and respected citizen. He has become, in fact, a Hawaiian, just as much as the Irishman, German, and Swede, under conditions equally favourable to them, have become accepted as Americans. This does not mean, by any means, that he has entirely lost the inherent characteristics of his countrymen,—it will require many generations to do this,—but that he is a

faithful and zealous subject of his adopted land, where so many of its population are aliens.

Early in the days of modern Hawaii, through the sandalwood trade, being the principal market for this valuable export, China began to play an important part in the development of the islands. To a Chinese mer-

chant, who came to Hawaii in 1802, in the sandalwood business, belongs the credit of first manufacturing sugar from cane growing wild on the island. But the process was too slow to make the work a success, and it was left for the inventive genius of the Americans to reduce the enterprise to a profitable science.

Chinese immigration then followed, very much after the manner of the coming of the European races into the United States at the outset of opening up of the country. The better class of Chinamen, with a spirit of

HANALEI RIVER AND RICE FIELDS.

enterprise and adventure coupled with the natural desire to better their fortunes, came as traders or labourers having the genuine purpose of staying permanently. Liking the climate and country, they soon lost all desire to return to their native land, and those who had left wives and families at home sent for them to help found new homes here. More than the race has done in any other country they associated with the other inhabitants, intermarrying with them, until to-day a Chinaman is considered the best match possible for a native Hawaiian.

The pioneers came about three-fourths of a century ago, but the tide of immigration had not fairly set in that direction until 1840, and even then

the rush did not begin. This came comparatively a few years since, when the fright over the flood of the Japanese caused the authorities to compel the planters and seekers after cheap labour to look to China for their help. This of course brought an influx of the lower class, but the better element had gained a footing and a higher standing than the natives of Japan have yet acquired, or will for a long time to come.

In the grave perils of the eighties, when immigration was overrunning the islands to the menace of its civil liberties, this class joined with others zealous for the good of the government to minimise the common evil by weed-

UMBRELLA TREE, COCOANUT ISLAND.

ing out as much as possible the masses of those who, their term of bondage over, tended to become hangers-on of the country, — paupers and criminals. The consequence was that a large percentage of the Chinese, who had no tie to bind them longer to the islands, were sent home as soon as their time of contract service had expired. The end of the century will find the last contract closed, and but a few of these labourers in the country.

It is true fewer Chinese women come to the islands than of the other races, yet they do come in considerable numbers, and the homes of the people, from the humble huts of the plantation toilers on the mountain-sides to the luxurious dwellings in the centres of population, are found in

GRASS HOUSE AND NATIVES.

all parts of the seven isles. The following statistics will give a good idea of the situation: According to the census of 1896 there were 21,616 Chinese on the islands,—19,167 males and 2,449 females. There were 2,234 who had been born in Hawaii, and of 19,317 Chinese over six years of age, 48.47 per cent. can read English or Hawaiian or both. Of 665 Chinese children within school age, 92.48 per cent. attend school. The Hawaiian-born Chinese are 10.3 per cent. of the population born of foreign parents. One-fourth of the Chinese men over fifteen years of age are married, while of 1,269 females, 1,173 are married, and the average

BAMBOO TREE.

number of children born to a Chinese mother is 2.83 per cent. Of these children 87.56 per cent. survive. Since 1845, notwithstanding that the naturalisation of the Chinese has been discouraged, and since the overthrow of the monarchy no one of any race or nationality has been so favoured, 722 Chinese have been given their naturalisation papers.

In regard to occupation, the Chinese, male and female, are divided as follows: Labourers, 10,941; farmers, 1,278; rice planters, 718; teamsters, 105; mechanics, 220; fishers, 294; ranchers, 98; coffee planters, 36; mariners, 15; merchants and traders, 823; clerks and salesmen, 295; doctors, 15; other professions, such as teachers, law clerks, etc., 303; miscellaneous occupations, 1,569. Nearly a thousand of the Chinese have

professed the Christian religion, sixty-seven having joined the Roman Catholic Church, and 886 the Protestant.

The number of Chinese owning their homes is 800, all but 200 of their houses being built on long-leased lands, which is the prevailing custom among all nationalities. They own more horses and working-cattle than any other race, having over three thousand horses and nearly half as many cattle. They own 7,862 pigs, a larger number than any other race on the islands. In Hawaii each business is licensed, and the

NUUANU STREET, HONOLULU.

Chinese in 1897 held 1,623 licenses, paying to the government in these fees \$48,724. They own property assessed at \$125,274.31, and they paid in 1897, with their license fees, nearly one-eighth of the amount raised in taxes for the year. An observant writer says of the race :

“As independent farmers and agriculturists, the Chinese number 1,278. Most of these have only small holdings. They raise vegetables, which are largely sold to the white families, and when away from the centres of population, corn, potatoes, and figs are their chief sources of income. As rice planters they have almost a monopoly, numbering

718 out of 844. In this line the Chinese have been of great benefit to the country. Large areas of land which were unfit for ordinary cultivation, great reed-covered swamps, which were the home of the wild duck and the water-hen, have been made productive by them, and now yield a fine rent to the owners of the land and a revenue in taxation to the government. As fishermen, the Chinese stand next to the Hawaiians, numbering no less than 294. But the Hawaiian fishermen work chiefly each for themselves or in little companies of from three to half a dozen. The Chinese work in large companies, a firm of small capitalists owning the boats, nets, and drying-houses and other buildings, and employing their own countrymen at wages, and sometimes with a small interest in the firm, to do the work. If there is one thing that this race understands better than another, it is co-operative labour. By means of it they get more out of their workers than any other race can obtain out of them.

WILD GINGER.

The Chinese take the lead among merchants and traders, more than half of those so employed being Chinese."

The Chinese servants, of which there are many, with Japanese a good second, seldom live in the house with their employers, but have dwellings of their own, going to their place of occupation in the morning and returning to their homes in the evening. They ask for only one holiday, the Chinese New Year, which comes on February 1st. Then they absent themselves for the time, and their places must be filled by other persons. Before going it is the custom to make their "mamma," or mistress, a present of some Chinese trinket, a high-coloured vase, some

fancy work, flowers or sweetmeats, receiving in return some gift that is sure to be appreciated by them.

The Chinese are among the most generous contributors to educational and benevolent enterprises, calling less on the general resources for charity than any other nationality. The fountainhead of the philanthropic work is the United Chinese Society of Honolulu, a representative body including all the smaller organisations, concerning which it has

A LANAI OR VERANDA.

been said: "The functions of the United Chinese Society includes all those things, whether of business, philanthropy, public spirit, race, or national matters, or matters of intellectual uplift, which can be better done through organisation than by individual interests. It succours the poor, finds work for the unemployed, takes care of the sick, relieves widows and orphans, buries the dead, sees to the return to China of the bones of those who, dying here, wished their bones buried on their ancestral soil. It has charge of the public celebrations, of national holidays and events; it entertains those who are the guests of the

37-MAKEE ISLAND - J. A. GONSALVES - PHOT.

MAKEE ISLAND.

whole people. It looks after the general interest of the Chinese in Hawaii."

Honolulu has been aptly termed the Paradise of the Chinese. In their quarters, for even in Hawaii they collect together more or less, one sees none of the filthy alleys and unsightly homes. The yards are surrounded by neat fences and flowers. The walls of the dwellings are festooned with vines, and over trellises are seen ripening figs and other fruits.

STREET IN HONOLULU.

Everywhere peace and contentment reign, for the industrious Mongolian here follows his busy routine of work or business without fear of molestation. His tiny shops, instead of show-windows having their entire fronts open during the day and closed with stout wooden shutters at night, line the streets. Numerous occupations have been taken up by them, one of the most common being that of the tailor, John in his native dress and queue, running a sewing-machine in making cotton holokus for the Hawaiian women, presenting an odd picture of Oriental and Occidental life. But this is not at all noticeable in the Hawaiian

capital, which affords a shifting panorama of lives of many colours and combinations of customs.

Chinatown would lose its most prominent trait without its joss-houses with their curious architecture and worshippers crooning and mumbling before their hideous gods. These are not lacking in Honolulu, though they are less pretentious in appearance than those seen in San Fran-

BISHOP MUSEUM.

cisco. The Chinese here, too, have two theatres, where actors of repute and ability perform their parts to appreciative audiences.

In close proximity to their temples of worship are the schools, the largest Chinese schools outside of the empire, where the pupils, numbering about one hundred and fifty, are taught English as well as their own language, which is soon forgotten when they have acquired the former. They have a most attractive kindergarten, separate rooms being fitted up with charts, pictures, blackboards, and tables, for the boys and girls, all of whom look very picturesque, if not pretty, in their native costumes, and show great eagerness to master the tasks before them.

The Chinese of Honolulu support two churches, the Christian, of Congregational affiliations, and St. Paul's, whose patron is the Anglican Bishop of Honolulu. There is also a Chinese Young Men's Christian Association, the first of its kind in the world. This is well organised and supported, but for more effective work among its class is the Mills Institute, the Chinese name of which is Chum Chan Shue Shat, meaning "searching for truth literary institution." A home day and boarding school for Chinese

AVENUE OF PALMS, PRIVATE GARDEN.

youth occupies commodious buildings, set in beautiful grounds near the centre of Honolulu. Its influence is felt all over the islands, and it is generously maintained by Chinese and whites.

What is likely to prove a popular benevolent institution is the Chinese hospital recently completed in Honolulu on grounds given by the government for that purpose. It is in charge of a physician and surgeon graduated in Hong Kong according to Occidental system of medicine and surgery, also another trained in the same city but under the Chinese methods of treatment, the patient being allowed his choice. This hospital

is liberally supported by the Chinese and is free to receive patients from that nationality.

Honolulu has a well-equipped and well-disciplined Chinese fire brigade, which has built its own engine-house, and bought its engines and uniforms from money raised by subscription among its own countrymen.

As might be expected in a community as numerous and prominent as that of the Chinese in Hawaii, there are to be found many men of thought and action, who are not only leaders among their countrymen, but who are prominent among the business and professional men of all nationalities. Under the Hawaiian government, monarchy or republic, the race has been treated fairly and has no complaint to make, though from apparent reason a large percentage are not really citizens and cannot become such, but are aliens. The treaty of annexation to the United States prohibits any further immigration of the Chinese to Hawaii, or from that territory to the continent. But unlike the Japanese, the Chinese are not much inclined to meddle with politics, and appear a contented people in American Hawaii.

ROYAL PALM AVENUE.

NUUANU AVENUE.

CHAPTER XIII.

ANNEXATION.

WITHIN a hundred years the flags of European countries have floated over the islands four times: first, the Russian in 1815; second, the French in 1839; third, the British in 1843; and fourth, the French again in 1849, when Admiral Tromelin, of the navy of France, seized the fort at Honolulu. Reluctantly each time these powers had withdrawn their hold upon the little kingdom, and ever afterward stood expectantly waiting for the opportunity when they could lay their hands on this "Key of the Pacific." Another power, too, Japan, had sprung into the front rank of aspiring nations, presenting a stronger threat than all the others against the safety of the new government.

The idea of annexation to the United States was transplanted by the Yankees along with their business connections. Thus, with their Americanising influences, we see, from the days of the first Kamehameha

through all the changes of rulers, a continual agitation of this subject, and time and again appeals were made for some sort of an alliance with the great American republic.

The Provisional Government was no sooner formed than a commission was sent to Washington to reiterate in stronger terms than ever this claim. This commission consisted of Hon. L. A. Thurston, W. C. Wilder, W. R. Castle, J. Marsden, and C. L. Carter, and the same steamer that conveyed

GOVERNMENT BUILDING.

them to San Francisco carried a letter of remonstrance from the ex-queen.

Benjamin Harrison was then President of the United States, and he was believed to feel friendly toward the measure. Minister John L. Stevens and Captain Wiltse of the navy decided to establish a temporary protectorate over the islands, and raised the flag of the United States on February 1, 1893, when the first issued the following proclamation:

"At the request of the Provisional Government of the Hawaiian Islands, I hereby, in the name of the United States of America, assume protection

of the Hawaiian Islands for the protection of life and property, and occupation of public buildings and Hawaiian soil, so far as may be necessary for the purpose specified, but not interfering with the administration of public affairs by the Provisional Government. This action is taken pending and subject to the negotiation at Washington."

The American Secretary of State, however, did not approve of the action, claiming that it was not consistent with the existing state of affairs between the countries to impair "in any way the independent sovereignty of the Hawaiian government by substituting the flag and power of the United States as symbol and manifestation of paramount authority." A new political power came into possession of the government at Washington, and upon the inauguration of President Cleveland on March 4, 1893, he withdrew the treaty. On the 11th instant he sent Commissioner Blount to Hawaii to investigate the situation.

March 31st Commissioner Blount notified President Dole that the American protectorate must end, and April 1st the American flag was hauled down without any public notice, as

President Dole feared an outbreak from the masses if it should be known abroad at the time. The royalists now believed there was hope for them, while the European powers did not attempt to conceal their pleasure over the turn in affairs.

Though severely censured by some, no doubt Commissioner Blount made such an investigation as he could under the peculiar circumstances in which he was placed. At any rate his report was not favourable to annexation, and it became apparent the administration had little objection toward reinstating the deposed queen if it could be done quietly, pro-

fessing to believe that she had been treated unfairly by the American minister in landing troops at the critical period of the revolution. We have seen that this was done without any motives of intervention, except to protect American property, which this government was bound to do in case of any outbreak. If restored to power the queen must "grant full amnesty to all who had participated in the move against her, including persons who are or have been officially or otherwise connected with the

NUUANU STREET, HONOLULU.

Provisional Government, depriving them of no right or privilege which they enjoyed before the so-called revolution. All obligations created by the Provisional Government in the course of administration should be assumed."

At first the queen flatly refused to accept these terms, but finally agreed to them and signed the proper papers, when Mr. Willis, who had succeeded Minister Stevens, presented it to the president of the Provisional Government, who declined to agree to the proposition, or to yield the power which had been vested in him as the chief executive of Hawaii, and also as min-

AVENUE OF PALMS

ister of foreign affairs. Upon receiving this report President Cleveland commended the vexations matter "to the extended powers and wise discretion of Congress," where no special action was taken.

The Provisional Government remained firm in its possession, though the royalists and their sympathisers continued to hope that the United States would yet step in and reinstate the queen. When the republic was formally announced on July 4, 1894, the United States recognised its authority, and other national powers did so during the year, so that the republic was fairly established, though the government rested upon a

PROCLAMATION OF REPUBLIC, JULY 4, 1894.

volcano, which, like its fiery mountains, was liable to break out at any moment.

The political leaders and plotters of the defeated party kept the natives in a continual condition of alarm, fearful that their property or liberty would be taken from them. By some it was believed that the colour line would be drawn as it had never been. Plots and schemes were soon afoot, no doubt with the knowledge if not the assistance of the queen, to restore her to power. Arms were procured and concealed to be in readiness for use in case the plans should mature. Secret meetings were held in the vicinity of Honolulu with increasing frequency, and early in the new year,

on the afternoon of Sunday, January 6th, the police were notified that a party of suspicious characters, mostly natives, were gathered at a house near Diamond Head. Captain R. W. Parker immediately sent some officers with search warrants to the place. On their way they were joined by four Americans, but native born. Upon reaching the houses the party was fired upon, and one of the volunteers, Mr. Charles L. Carter, who had been a member of the late commission to the United States, was mortally wounded, so that he died a few hours later. The situation now looked serious.

At the time religious services were being held at the Central Union Church, where a large congregation had gathered, and the Rev. Mr.

WAIKIKI ROAD ALONG THE BEACH.

Bernie was in the midst of one of his eloquent discourses when, unnoticed by the listeners, a man entered the building and whispered to a member of the National Guards sitting near the door:

“The natives have opened hostilities at Bertlemann’s house beyond Waikiki. They have killed Carter, and wounded two or three. Notify the members of the Guards to meet at their quarters at once.”

This man, whose name was Benner, went silently and swiftly from pew to pew, and whispered to those here and there the call, when each individual went out without disturbing the preacher, who must have felt surprise at seeing so many quietly leaving him. If those who were left were curious as to the cause which had taken so many of their number away, quiet reigned in the house until the clatter of horses’ feet,

as the cavalry dashed past, and the report of firearms aroused all to a sense of the situation. A rush was immediately made for the door, and Mr. Bernie, thus rudely broken in his sermon, followed his congregation to learn the extent of the alarm and its cause.

Soldiers were to be seen forming and marching away; there was news of fighting near Diamond Head; flying reports of many killed and wounded were repeated on every hand, while intense excitement reigned in all sections. An insurrection was on foot, but beyond that

BISHOP HALL, OAHU COLLEGE.

the best posted could give nothing definite. That was the most anxious night Honolulu ever knew. The gravity and danger of the situation was now fully realised, and the following day twelve hundred armed men were called to the assistance, and martial law proclaimed.

Sharp fighting ensued for several days, until the native forces under the command of Samuel Nowlin, formerly colonel of the queen's body-guard, and Robert Wilcox, who had been at the head of the uprising in 1887, were forced to surrender. Several of their number had been killed, and the uprising was at last under control. During this and

all previous revolutions seven lives had been lost on the republic's side, and as many wounded.

A trial was given the captured conspirators, beginning January 17th and lasting for thirty-six days. The leaders were sentenced to pay heavy fines, and to suffer long terms of imprisonments. The ex-queen, believed to have been concerned in the insurrection, was arrested and given trial with the others. Her sentence was a fine of five thousand dollars and imprisonment for five years. She remained in detention until December, when her sentence was remitted, and signing a formal letter

DIAMOND HEAD.

of abdication on January 24, 1895, she was fully pardoned. She then started on a journey abroad, coming to the United States during her tour.

Uninterrupted peace succeeded, while the Hawaiian republic grew steadily stronger and more prosperous. It now showed that it had level-headed men at its head, and that it was deserving of consideration; that annexation to the United States meant a "consummation, not a change." The politics of the United States government, which had ever had much to do with the policy of Hawaiian annexation, again had changed. Hawaiian commissioners appeared in Washington soon after the inauguration of President McKinley, and an annexation treaty was sent to the Senate. While this body hesitated and considered the

BAKING SANDS.

matter, the Spanish-American war broke out ; Admiral Dewey won his famous victory at Manila, and with the prospect of the United States' new power in the Far East, the need of the Hawaiian Islands as a half-way station on the broad Pacific was realised as it never had been before. The bill of annexation now met with little opposition, and on Thursday, July 7, 1898, President McKinley approved of the work of Congress by his

U. S. CRUISER PHILADELPHIA.

official signature, when the dream of American Hawaii was at last fulfilled.

July 18th, the steamer *Coptic* reached Honolulu from San Francisco, carrying the news of annexation. As this fact had been anticipated, the people were prepared to receive the messenger with demonstrations of delight. Whistles from mills, foundries, and steamers screamed out the announcement of the tidings from every quarter ; fireworks set the town ablaze ; while the streets were paraded by marching columns and bands played patriotic American airs. Altogether it was a great jubilee, and Captain Sealby, who had brought the news, was presented with a souvenir cup bearing the following inscription :

“Annexation. Presented by the citizens to Capt. Imuan Sealby, R. N. R., who brought the good news to Honolulu.”

The final act in the long and momentous drama of annexation was enacted on August 12, 1898, when, at precisely eight minutes to twelve o'clock noon, the Hawaiian flag was hauled down from the flagstaffs on all of the government buildings, and just three minutes later the stars and stripes were run up in their places. The ceremonies were simple and

HAWAIIAN FEAST.

impressive, as became the scene. A noticeable feature of the occasion was the small number of Hawaiians witnessing the event. They were showing their affection for their former queen, who had returned to her native land a few days before. No people have stronger love for their rulers than the natives of Hawaii. At a public reception given Liliuokalani a short time before, many of them had come miles to pay her homage. To-day their absence spoke, more forcibly for them than any words could have done, their feelings. In more ways than one the occasion reminded the spectators of a funeral, which it partly was: the last rites over a traditional government. The national anthem, “Hawaii Pono!” was played for the

last time; the bugle tapped, and the Hawaiian ensign of the Kamehamehas, under which many of those present had been born, sank from sight for ever as a national emblem. Amid the intense silence of the onlookers came the bugle call again, the band played the "Star Spangled Banner," when "Old Glory" rose on the tropical breeze, henceforth the national flag of the first republic of the Pacific. Cheers now rang on the air; eyes that were moist with tears a minute before brightened as the new colours made a beautiful picture overhead, which seemed to augur well for the future.

The hour fraught with so much sadness to the Hawaiian passed, and having a better and fuller appreciation of the new era dawning upon their home land, the new subjects of Uncle Sam moved about with lighter hearts than they had known since the beginning of the revolution. The republic has nothing to fear from them, for more loyal subjects never acknowledged fealty to a sovereign.

The population of the islands in 1896 was 109,020, divided as follows among the different races: Hawaiian, 31,019; mixed Hawaiian, 8,485; Japanese, 24,000; Chinese, 21,000; Portuguese, 15,000; other Europeans, 4,000; Americans, 3,086. But these figures do not forecast the true situation. Notwithstanding the small percentage of their number, the islands are an American colony. What Hawaii has gained of civilisation, of religion, of education, and government has been derived from American sources. Neither have the islands been unmindful of this. Everywhere American influence has been acknowledged, and American counsel sought. They proved their loyalty to the Union by sending into the army during the civil war more than their quota of soldiers voluntarily. Our patriotic days have been observed with all the enthusiasm as at home. In Honolulu Fourth of July is as faithfully kept as here; Memorial Day sees its lines of marching veterans filing in solemn manner to the graves of her soldier dead, followed by citizens of every nationality as sincere mourners; and Thanksgiving Day is observed with even greater faithfulness than in New England. No territory of the United States has been annexed with so strong a leaven of Americanism as these islands.

Chief Justice Judd administered the oath of allegiance to President Dole and the other officials, all of whom were authorised to conduct the local government of the islands until Congress should take further action in the matter of administration.

MERCHANTS' COUNTRY HOUSES.

CHAPTER XIV.

VISTAS OF OAHU.

OAHU, if not the largest, the most fertile or picturesque of the group, is the most important of the Hawaiian Islands, a supremacy gained for it by its harbours, the finest in the Pacific. Its sea-coast, broken on the southeast by rocky islands, and on the southwest, or windward side, by rugged cliffs thrusting their high, craggy breasts down to the very edge of the water, where the surf beats with an incessant roar, is generally bordered by a belt of fertile plains from a quarter of a mile in width to six miles, ascending toward the interior until stopped by the mountain ranges, whose brown and yellow tints, showing their volcanic origin, contrast vividly with the perennial green of the lowlands. Between these ridges, which look in the sea distance like terraced hills and detached peaks, are frequent valleys and elevated plateaus of great fertility, the lava beds of unrecorded days.

Long sections fringed with graceful cocoa-palms raising their plumed crests on fragile stems, a coral reef, often half a mile in width, nearly encircles the island.

Trending from southeast to northwest parallel mountain ranges cross the

PALMS AT WAIRIKI.

island on the east and west sides. The highest altitude is the peak of Kaula, 4,060 feet above the sea, and belonging to the western and shorter line. Between these backbones of Oahu, and forming its largest agricultural districts, is Ewa Plain, at places ten miles in width and twenty in length, extending from the shore of Pearl River harbour on the south to the sandy plains of Waialua Bay district on the north. Next in size, and exceeding it in fertility, is the rich, alluvial plain of Honolulu, ten miles in length and two in width. Another ideal tract is Nuuanu Valley, bounded

LAVA HEAP.

by a mountain wall twenty miles in length on the upper side, and below by the green, rolling plain. Among the other fertile lands are Manoa Valley, inland from Waikiki, six miles south of the capital, and the favoured rice-fields and cocoanut groves of Moanalua, scarcely five miles from Honolulu in the opposite direction.

At the foot of the eastern range of mountains, on what was seventy-five years ago a treeless sand-plain, sits the "Mistress of the Pacific," her back to the wide framework of lava domes, volcanic peaks, and truncated cones, grim reminders still of those days when this scene was

the amphitheatre of that fiery power at work upon its still unfinished task of building the Island Paradise. Decked with her flowers and profusion of palms, the queen sits looking out upon the shimmering bay, a native of the tropics, with the blood of the temperate zone coursing through her veins.

Honolulu is on the south shore of Oahu, nearly central of the whole group of islands, and has a harbour well suited to the needs of a commercial metropolis. It is said that Captain Brown, of the English ship *Butterworth*, was the first white man to discover the bay, and he gave it the name of Fairhaven. This was very appropriate, but was soon forgotten when its Hawaiian substitute was found. As has been mentioned, Kamehameha's John Smith, whose surname was Young, advised making this the site of the Hawaiian capital, and in November, 1820, the little fishing hamlet was occupied as the future seat of power.

The entrance to the harbour is somewhat difficult to those ignorant of the windings of its passage, but once the way is made the incoming craft ride safely at anchor within its protecting arms. One of the most striking landmarks that attracts the approaching seafarer is Leahi, or Diamond Head, looking in the distance like a huge watch-dog crouching on his forepaws at this exposed point, while he continues his long and lonely vigil over the sea. Once, when its sides throbbed with the mighty forces at play within, it must have presented a majestic form, — a stupendous lighthouse illuminating far and wide the troubled waters. But its mighty walls fell with the blowing out of its light thousands of years ago, and ever since its ruins have remained as a memento of its former greatness.

Honolulu has a population in round numbers of thirty thousand, a cosmopolitan people, refined, intelligent, prosperous, earnest in whatever they undertake. You see this in the cleanliness of the seventy miles of streets, in its well-built brick and stone business blocks, in its handsome residences, in its public buildings, in its good roads about the city, and its attractive drives into the country. It is a city of foliage and flowers, whose tropical trees and plants are laden with a wide variety of fruit and fragrance; it is preëminently the city of homes, where tenement houses are comparatively unknown.

The public buildings are in keeping with the thriving city, among

which can be named the Government Building and National Palace, fine buildings both of them in settings of trees, flowers, and beautiful lawns, with spacious grounds; Honolulu Free Library, which contains over twelve thousand volumes of general literature; Post-Office Building; Bishop Museum; Public Hospital; Iolani Palace, claimed to cost five hundred thousand dollars; Aliiolani Hall, the main government building, where the Legislature meets; Lunalilo Home, built by that king as a home for aged and indigent Hawaiians; Queen's Hospital, in-

Y. M. C. A. BUILDING.

tended for the relief of Hawaiians of both sexes free; Young Men's Christian Association Building; Old Folks' Home; Opera House, capable of seating one thousand people; Oahu Jail; Insane Asylum; Royal Mausoleum, and many others. Handsome churches of various denominations, as has been described, and good schools of the several grades and Oahu College speak of the moral and educating influences of the people. The city has a good system of water-works, and a well-equipped fire department with latest steam fire engine.

Honolulu is favoured with a fine lookout, Punch Bowl Hill, the burnt-

off cone of an extinct crater, rising in a circular form to a height of almost five hundred feet, with the town and its suburbs at its base. From this sightly spot the surrounding country, from Diamond Head on the east to Pearl River on the west, is spread out like a panorama.

The most popular resort of the island is the famous Waikiki, the Long Branch of Honolulu. Here are fine private residences, picturesque cottages,

WAIAANAE.

cool and delicious groves of cocoanut-trees which were the favourite resort of early kings; in the background the corrugated mountain range; in front, the wide crescent beach, one horn tipped by the red crag of Diamond Head, and the other by the opal tints of Waianae range; outside the emerald sea, dancing, sparkling, inviting all to its soothing embrace. There are attractive bath-houses, and ocean bathing here has none of the chill freshness of a New England atmosphere. There is no fairer beach, no smoother bottom, no clearer water than at Waikiki, and, what is better, every one seems to catch the spirit of the native, who is never so much at

home as when, surf-board in hand, he rides the rolling billows. The poet proves something of its entrancing beauty, when he says:

‘The cocoa, with its crest of spears,
 Stands sentry round the crescent shore,
 An algaroba, bent with years,
 Keeps watch beside the lanai door.
 The cool winds fan the mango’s cheek,
 The mynah flits from tree to tree,
 And zephyrs to the roses speak
 Their sweetest words at Waikiki.

“Like truant children of the deep
 Escaped behind a coral wall,
 The lisping wavelets laugh and weep,
 Nor heed old ocean’s stern recall.
 All day they frolic with the sands,
 Kiss pink-lipped shell with wanton glee,
 Make windrows with their patting hands,
 And singing sleep at Waikiki.”

One of the most noted spots on the island of Oahu is the historic Pali, that rugged pass in the Waianae range where, in the last great battle of the early Hawaiians, the ill-fated Oahuans met their tragic fate from the triumphant warriors of Kamehameha the Conqueror. This famous place is reached from Honolulu by a wide, well-worn road leading through the most beautiful dale on the island, Nuuanu Valley. Over this broad way in the shifting scenes of the busy years has passed many a procession of historical importance: the dusky ranks of an invading army, the dazzling cortège of a triumphant monarchy, the trooping throng of women and children carrying their *leis* to the coronation of kings, the noisy mob of insurrectionists, the funeral of the dead monarch marching silently to the royal mausoleum, the sad-eyed columns of foreign labourers, with hopeless homes behind and homeless hopes ahead, the standard bearers of a new government,—all these, with many others, natives and strangers, have passed along Nuuanu Avenue.

The traveller to-day over this memorable route passes a long line of summer villas,—it is always summer in Nuuanu Valley,—crosses the

bridge spanning the brawling stream running from the mountain to the sea, passes a landscape touched with the skill of Japanese artists, passes gray-walled cemeteries where sleep the dead of the pioneers of Honolulu, and the royal mausoleum, where the funereal cypress bows in grief over the long sleep of kings more generous than wise, passes the odd, grotesque-looking tea-houses of the Chinese, passes the summer palace of the ill-treated Dowager Queen Emma, set back beyond rows of stately palms, passes taro patches and banana plantations, and large pineapple fields in the distance, to find himself at last fairly in the country.

QUEEN'S HOSPITAL.

Now he passes less frequently the homes of the foreigners, the American, the European, and the Asiatic, the walls and wide verandas of whose dwellings are overhung with trailing vines and flowering plants. If he is an American he is struck by the unvarying architecture of the houses, which seem to him a combination of the New England and Southern styles of building, by the absence of chimneys, and the ever open doors and windows. He soon learns to tell at sight the home of a Portuguese by the grape-vine and fig-tree before his door, as if the owner would not feel at home without these reminders of his fatherland. A native cottage, the frame house introduced by the missionaries, — few grass huts being seen now, more's the pity — occasionally greets his vision, a taro patch and bed of carna-

tions — red, pink, and white — defining his nationality as surely as the fig and vine bespeaks that of his foreign neighbour.

Around these dwellings are seen the *Kanaka*, the native Hawaiian, in his coarse cotton shirt and trousers, his *waihine maro*, wife, in her bright-coloured calico holokus falling loosely from a yoke at the shoulder and without girdle or gathering. Thus simply and singly attired she might be thought to be unattractive, but with her profusion of raven hair, tied with a gay bandelet of feathers and ohia blossoms, softly expressive dark eyes, pleasant countenance, erect figure, graceful and steady carriage, she commands the admiration of the beholder. The young *waihine*, woman, a dazzling vision of sparkling eyes, pearly teeth, bright flowers, and bare legs, is never more happy than when, astride of her flying pony, she startles the timid stranger with her boldness of address, her voluptuous bust rounding in graceful curves, her undaunted head bound with a brilliant bandean, a riding-robe of orange or crimson encircling her waist, hips, and limbs, and thence suspended waving on each side like triumphal banners in token of confident victory, as she dashes past as free and fleet as the trade-wind fanning her brow. Saturday afternoon is the time usually given over to the wild spell of horsemanship. Then the whole native population seems to be on horse.

Gradually ascending, the road leads into the region of perpetual showers, clothing the brown sods of the hillsides with a dense sward outrivalling for freshness and tenderness the famed blue grass of Kentucky, and decorating the vales with matchless ferns, whose long fronds are tipped with a rich red, brown, and crimson. Now the rank grass and ferns yield to forests of

PRINCESS KAIULANI IN NATIONAL COSTUME.

wild banana, guava, and candlenut, with occasionally a cocoa-palm. The walls of the valley grow higher, steeper, and narrower. Waterfalls tumble headlong over perpendicular chasms, and the chill wind that constantly fans the peaks strikes the newcomer, sending a shiver through his frame for the first time since landing on Oahu's shore. He has now been suddenly transported to the temperate zone.

LAVA PILE.

Many have described the beauty and sublimity of the scene from the Pali, many more will attempt it, but human powers of description will never exhaust the theme or do credit to the wide panorama of tropical plains, valleys, mountains, forests, rocky pinnacles, and sunny sea laid at the feet of the admiring beholder. The Pali, which is simply a Hawaiian word for precipice, is the natural gateway between the two sections of Oahu, separated by the mountain range running across the island from shore to shore. This is seen as the approaching traveller winds up the wide road, with its rocky wall along the west side, the perpendicular cliff on the other hand.

Through this gorge the wind constantly rushes as if propelled by a pair of mighty bellows hung somewhere beyond, and he is glad to seek the protection of the small lookout erected at the summit. Honolulu now lies a thousand feet below, and between five and six miles away; its grove-like retreat of homes and churches and public buildings, the masts of the ships in its harbour, and that always-to-be-seen Diamond Head are just distant enough to lend charm to their fair environments.

Other towns and hamlets, other church spires and schoolhouses, rice and sugar plantations, isolated dwellings, broad plains covered with their growing crops, ridges of smaller hills, with dales between, said to have been the beds of an inland sea, and far beyond, meeting the horizon, where the vision ends, rests the ocean, looking like a large mirror.

Upon turning in the opposite direction, toward Windward Oahu, the sightseer is amazed at the vivid contrast in the vistas. Instead of the pretty villages and metropolis of men, the numerous plantations and

STREET IN HONOLULU. ROYAL FUNERAL PROCESSION.

scattered dwellings of thrifty husbandmen, green-clad plains and verdant valleys, he gazes on an extensive domain of unreclaimed lands, of fragmentary mountains whose splintered pinnacles pierce the overarching sky, and half-hidden ravines running back into the rugged heights, narrowed to points like so many huge wedges driven by some giant hand to hold the ridges apart, that there might be room at their feet for the lowlands belting the shore. It is seen now that Oahu is composed of two dissimilar parts, its sunshine and its shadow. Amid this broken fastness a sugar plantation is occasionally seen, here and there the black stack of a sugar mill, a village or two, isolated homes of adventurous

fortune-seekers, nearer the coast the few rice fields of ambitious Chinamen, but on the whole man has done little to break in upon the solitude of nature. Beyond this wild, mountainous country the coral reefs of the placid Pacific, its ultramarine of mid-ocean in the shallow waters of the Hawaiian seas becoming an emerald hue, glimmer faintly in the vanishing light.

The descent into this shadowland is abrupt, the road winding down at an angle of forty-five degrees. The tourist gladly turns back from whence he came, and no longer doubts the frenzy of the doomed warriors whose wild retreat over the Pali gave the spot such a tragic interest.

Next to Honolulu, the most important towns on the island are Kanehoe, at the foot of the Pali, the largest village on Windward Oahu, and considerably cooler than at the capital city; Waianae, nestling at the base of the mountains in a narrow valley on the southwest coast; Waialua, a large and prosperous village at the north end of the plain of that name; and last, but not least, Pearl City, nineteen miles from Honolulu by rail, and the rival of that fair city in its beautiful setting of tropical verdure. This town, founded by the Oahu Land and Railroad Company, and belted on the north by a fertile strip of level land extending back to Ewa Plains, now famous for the big Ewa sugar plantation, stands on a peninsula which extends into the harbour that may be considered the best in the world as soon as it has been properly dredged. It was here the United States secured such valuable rights in 1875. Pearl City has long been a favourite resort for boating, bathing, and fishing, and is destined to rival its sister only twelve miles distant by water line.

Above all else, this place and Honolulu lend to the Hawaiian Islands their real value as a possession to any country. Already the rapid increase of population on the Pacific slopes of America has set the tide of navigation toward that shore; with the United States controlling the Philippines and the Nicaragua Canal a reality, who can foretell the vast amount of ocean traffic in this direction? However great its growth or mighty its power, Hawaii will still remain, as it is to-day, the one great strategic point and half-way station between the continents, the arbiter that shall control and guide the commerce of the Northern Pacific. With her important interests at home and abroad, her capital will soon be not only "Mistress of the Pacific," but Empress of the maritime world.

CHAPTER XV.

GRIM MOLOKAI.

THE Garden of Eden had its serpent, and a shadow fell across the path of man even in that fairy-land. The modern Adam is not always satisfied with seeing only the bright side of the picture, and he must look for the darker colouring. He imagines there is a shadow somewhere, — a skeleton in the closet. Hawaii's skeleton is the leper; its closet grim Molokai.

Though he really hears less of them after reaching the islands than he had before coming, the newcomer feels that it is his duty to visit that dark corner holding the banished victims of an incurable disease. It is not as easy as he had expected to obtain passage to the out-of-the-way place. It is true the Board of Health make a semi-annual trip, but only those in the secret know when it is to be made. The object of this is not to be overcrowded with a mob of curious foreigners or natives who have friends and relatives there. Having, through some special influence, gained permission to accompany one of these parties, he is likely then to find a stormy passage, as if it were not intended that the lonely spot should be easy of access.

The history of leprosy on the islands begins in 1853, when, in addition to other epidemics and evils thrust upon the inoffensive Hawaiians, a new disease appeared among them, which they named *Mai Pake*, or Chinese sickness, as it had been brought to the islands by some Chinamen. In the poor condition of their blood, this new disorder soon gained a startling hold on the native population, so that as early as 1864 it had spread to an alarming extent. January 3, 1865, the Legislature passed an act to have those afflicted with the dread disease taken from the midst of others who had so far escaped its contaminations. This necessitated the breaking up and separation of families, but it would enable those suffering from it to be better treated, and it was hoped to stop in a measure the

spread of the complaint, for, singularly enough, the natives showed no fear of it, but persisted in mingling freely with their afflicted kin.

A peninsula containing some five thousand acres, on the north coast of Molokai, was selected as the most fitting place to carry out the really humane purpose of the government. This comprised the fertile valley of Kalawao, surrounded on three sides by the open sea, and on the other by a steep pali from two to three thousand feet in height, so that retreat was cut off in every direction.

LANDING CATTLE.

The enforcement of the law for the segregation of lepers created no little trouble for the authorities. Having no fear of catching it, the inhabitants did not take kindly to the idea of having their loved ones separated from them, and they did everything they could, in many cases, to baffle the officers. Others went willingly, and in many instances gladly, for it meant support for them and a certain release from work.

There are many pathetic tales told concerning the enforcement of the law. On the island of Kauai a very beautiful Hawaiian girl was found to be afflicted with the fearful scourge, and it was decided best to take her to the leper colony. But this doomed maid had a lover, who stoutly

OLD TRACK TO THE VOLCANO FROM HILLO.

remonstrated against this course, and, in his desperation to save his loved one from such a fate, he fled with her to the fastness of the forest. Finding themselves pursued by some officers, this couple ascended one of the highest palis, and, locked in each other's arms, leaped to death on the rocks below. Their mangled bodies were buried in one grave. There is still at large upon this island a leper man, on whose head is offered a large bounty to him who can effect his capture. Defying those who have hunted him, this hapless victim of an incurable malady has killed several men who have attempted to take him to Molokai. Those who have seen him lately say that ere long he will be obliged to yield to that disease whose power is greater and more terrible than man's.

Another story is of a little child, whose parents were believed to be in good health, but who was pronounced to have the fatal disease. In this case the officials could do no better than to order that she be taken to the leper colony. The distracted mother would not listen to this, and she plead so pitifully that a respite of three weeks was allowed, at the end

AKAKA FALLS, HILO. 510 FT. HIGH.

of which the little girl must be removed. Thereupon the mother prayed that her darling Maimoa might die before the end of the time, and though no one accused her of harming the child, she began to fail soon after, and on the morning the officers came for her she lay dead in her distracted mother's arms. The little one was buried close to the parents' door, and the mother watched the grave as tenderly as she had in life watched over the child. It was not long before she discovered that she was afflicted with the same malady. As long as she could she kept her secret from others, but the day finally came when she was told that she must go to

Molokai. Threatened with a separation from home and the little grave dearer to her than all else, she resisted stoutly, when the officers came to carry out their intentions. It was said that she burst a blood-vessel in the frantic resistance; but be it that, or grief and terror, she dropped dead on the mound covering her child, and was buried beside her.

The rich sought to buy off the officials, and no doubt often did for a time, and the poor sought concealment, and resorted to desperate means rather than yield, so it was little wonder if the enforcement of the law was not all that it should have been.

The example set by a learned and influential Hawaiian named Bill Ragsdale did more than anything else to show the natives the good intentions of the government, and caused many afterward to submit with a good grace to the inevitable. Ragsdale was a lawyer, rich, and of great influence in public affairs, with a most flattering future, when he realised that he was a leper. No one else had discovered it, and in his position he might have evaded the law for several years. Instead of doing that, he voluntarily gave himself up to the authorities, after having bade adieu to friends and relatives, all of whom tried to persuade him from his course. He had great influence among his race, though he was part white, and when they witnessed his unselfish act it had a beneficial effect on others. The name of Bill Ragsdale at once became a term of respect and endearment. This man was for a time governor of Kalawao, and many of the improvements for the comfort and the beauty of the colony are due to him.

Another name loved and revered by the unfortunates of Molokai is that of Father Damien, a native of Belgium, born in 1841, who, hearing of the suffering and hopeless condition of the lepers, went to Kalawao in 1873, to devote the balance of his life to their well being. Every one believed then that leprosy was infectious, and he expected to have the dread disease soon or late, but he went about his task with a calm resignation as to duty. He not only ministered to their spiritual welfare, but he dressed their horrible wounds, amputated diseased parts, sat by their bedsides, and even helped to dig their graves, ever living in the terribly tainted atmosphere. He lived among them ten years before he contracted the disease, and he died in 1889, mourned by every person who had known him.

Lepers are not great sufferers as a rule, and they meet their fate with an indifference which is melancholy. The average life at Kalawao is four years. Women are less likely to have it than men, and it is swifter in its results with children than with grown people. Sometimes those not afflicted are allowed to accompany friends there. Women have married leper husbands, and children have been born of such unions that showed no signs of the disease. Leprosy is not as contagious as it was at first supposed, still it is not well understood even after all the investigation that has been made. But under the present enforcement of the law, and the efficient work done by the Board of Health, its spread has been pretty thoroughly checked, and but few afflicted with it are now at large. In time it is believed that the last will be found and the terrible scourge stamped out.

There are now at Kalawao eleven hundred cases, all but fifty being Hawaiians. Thirty-two of the balance belong to the Chinese race, and the rest are whites, who were

mostly dissipated persons. It costs the government about a hundred dollars each annually to care for these charges, everything being done that can be for their comfort and welfare. There are Protestant, Roman Catholic, and Mormon churches, a Young Men's Christian Association Building, schools, reading-rooms and libraries, besides dwellings built by government and wealthy inhabitants of the place.

With the improved methods and careful study given to the disease, the white population of the islands have no fear of it, and the visitor might travel the country over without seeing any evidence of it, until he found

LAVA BUTTRESS.

it in his way to go to Molokai's lonely north peninsula. Few of those who have visited this dark corner of the Island Paradise have come away without feeling they have been paid for their pains, and yet having no desire to repeat the experience.

Molokai (*Ania Pali* in the native tongue) means "Land of Precipices," and no truer definition was ever given a name. The island is formed by a chain of volcanic mountains forty miles in length by seven in width. The lofty heights are broken by deep ravines and gorges, down many of which are swift-flowing streams. Still nearly a third of the entire area, comprising the west end, is desolate of vegetation, and will remain so until given a more plentiful supply of water. The larger portion of the population live on a narrow strip of coast land along the southern shore; but this fertile land is too dry to afford many kinds of vegetation, so that the people have to cultivate the uplands to get food. On the whole, aside from its unpleasant reputation as the home of a leprous population, though imported, it is the least promising of the seven Hawaiian Islands.

LAVA LAKE.

PACIFIC INSTITUTE.

CHAPTER XVI.

PICTURESQUE MAUI.

THE tourist, arriving at Honolulu and wishing to visit the larger islands and their principal points of interest, finds that he has the choice of two routes, with their variations. One of these, after taking him along the lee side of Molokai and between that island and Lanai, touches at Lahaina. Not only the capital and principal town of Maui, this place was once the metropolis of the islands, when kings had their palaces and foreign consuls their courts here, when whale-ships filled its harbour, and its single wide street was thronged with the armed retainers of royalty, and its broad, sandy beach alive with many races of people. The mountains, with their bare, brown slopes, crowd down close to the sea here, so close that the village is composed of but one street overhung with groves of cocoanuts, tamarinds, oranges, and breadfruits. Lahaina has changed

only, since those halcyon days of royalty and commerce, in a backward course, and like Mount Eka, which long since lost its fiery vigour, it has gone to sleep. But this slumber is now being broken by the sugar industry, which is rapidly giving a new life to the antiquated place, proving over and again how the fickle hand of business guides the destiny of towns as well as men. But the stop of the steamer is short here, and we leave the old town in its dreams—

“Where the wave tumbles,
Where the reef rumbles,
Where the sea sweeps,
Under bending palm branches.

“Where the hills smoulder,
Where the plains smoke,
Where the peaks shoulder
The clouds like a yoke;
Where the dear isle
Has a charm to beguile,
As she lays in the lap
Of the sea that enfolds her.”

Leaving Lahaina, the steamer coasts along the southern shore, soon passing under the lee of the western highlands, presenting a landscape that cannot be excelled by any other in the world, overtopped by Mount Eka wrapped in its lava cloak, grim and silent, thence across the watery inlet which nearly makes two of the island. Keeping close in to the shore of East Maui, where the mountains protect the coast from the trade-winds, the dreary little village of Ulupalakua is reached. Here those who wish to make a trip to Haleakala, “The House of the Sun,” leave the steamer. Rising ten thousand feet into the air, and having a crater thirty miles in circumference, this exhausted monster, with a pit 2,700 feet deep, is almost capable of swallowing Vesuvius entire, while from its interior rise cones of scorice to heights which dwarf St. Paul’s Cathedral. The poetical Stoddard declared that a trip to its summit was “a horse-back journey to heaven,” while another, less pleased with the result, turns away, declaring that “it should be called the Tomb, and not the House of the Sun, and that volcanoes have no business to be dead!”

Next leaving the rocky islet of Molikini to the southeast, and farther off

in the same direction Kahoolawe, the course is across Alalakeiki Channel, where the trade-wind rushes as if through a flume, to Upolu Point, the northern extremity of the island of Hawaii. Back of this port—more properly speaking roadstead—stretch extensive cane fields, through which runs a line of railroad.

Coasting along this shore in a southerly course, this region of rich verdure is soon exchanged for the barren, rainless land of Lee Hawaii. Twenty miles of this passage, and the steamer enters the little Bay of

CHASM OPENED AFTER COLLAPSE OF LAVA CRUST.

Kawaihe, which name has the very poetical definition of "torn water." It is evening, and the southern moon, climbing the distant mountains, throws far and wide over the placid sea her soft, purple beams, while Hualalai, a stark, brown dome against the sky, casts his ten thousand feet of shadows over the checkered landscape. This volcano has shown no signs of life since 1805, when it seemed to have spent its final fury. Standing on an eminence overlooking the coast remains an evidence of paganism in the last heiau built on the islands, done at the command of Kamehameha I., in 1791. This structure, one of the best specimens of its kind, has walls a dozen feet thick at the base, ten feet high on the upper

side and double that on the lower. — a rude parallelogram a hundred feet wide and over two hundred feet in length.

The next anchorage is not found until historic Kailua, the ancient capital of the islands, standing by a bay of that name, is reached, when the sun has replaced the moon, and the mellow atmosphere of a Hawaiian dawn makes clear the scene. Bordered by a rim of feathery palms and set with an A-shaped cluster of cottages, this place presents an odd mixture of bygone days and modern times. Here is another reminder of Kame-

SILVER PLANT.

hameha the Great, — an old fort-like building made of mud and lava. Once surrounded by hideous idols, tabu staffs, and grotesque wooden images, intended to awe the ignorant masses, it was here the old religion had its headquarters, and here the tabus were first broken by his son, Liholiho, upon whom the influence of women was stronger than priestly power. The gods set at defiance, the destruction of the idols and temples followed, amid the consternation of the people. In memory of the wild deeds done within its sacred precinct, the ruins are

known as the "Place of Ghosts," where no one with ever so slight a lingering of the old faith sets foot after nightfall. In later years Kalakaua had his country residence here, the royal mansion being now the property of the dowager queen Kapiolani. A presentation in more ways than one of former days, the walls of this spacious house have echoed to the semi-barbarous merriment of the profligate king's noted *laaus* and *hulas*, witnessed by the nobility seated in the rows of famous red chairs. In marked juxtaposition to this abode of a monarch who was not unwilling to see the ancient customs revived, stands the oldest Christian church on the islands.

OAHU PRISON.

Built of lava blocks, some of which had been hewn by one of the ancient kings of Hawaii as the corner-stones of a pagan temple, this house of modern worship is bare and desolate enough to have suited the most austere of Puritan worshippers. It requires no grievous strain of the imagination to transport one back to the scenes of the early missionaries and their odd congregation of uncivilised listeners who had but a faint inkling of the new creed they professed to accept. The church is now under charge of a native pastor. But it is not so much as a religious seat that Kailua is noted to-day. The coffee industry is the prevailing element, and a large coffee mill is seen, the most noticeable of modern buildings. Terms of the Circuit Court are held here.

Kealakekua Bay, famous for its associations with the name of Captain Cook, is the best anchorage on the western and southern coasts. A steep pali, honeycombed with the burial caverns of the Hawaiians, a rude Polynesian catacomb, forms the background of the scene here. In plain sight of the shore is the white shaft which marks the place where the Great Navigator paid the price of his perfidy to the native race, and a quarter of a mile distant are the ruins of the heiau of Kiki Au, where he received the homage due a god.

Above the narrow coast rim are great coffee plantations, which get their supplies largely at Napaupau, across the bay from Kealakekua. A little lower down the coast is another ancient place of modern interest, Honaunau, the old city of refuge. It was here that criminals and fugitives from any and every cause fled for safety in the trouble-

TARO PLANT.

some days of yore. Hawaii had two of these places, planned very much as those of the Hebrew Scripture. The other was on the windward side of the island, at famous Waipio, the one-time seat of royal dynasty, that of the renowned Kihi line of kings. These cities of refuge were walled towns and the pagan idea of a court of justice. Idols were set around the enclosure and guards stationed round about, but who ever was fortunate enough to gain their shelter was safe. After a certain time passed within, he was supposed to be innocent of any crime, and given his liberty. There was an old saying that "all roads led to Honamau," which fact is pretty well attested to-day by the many paths and roads winding out into the country above.

Still farther south, defying with its solid front several miles in breadth the stormy sea, stands Lepeampa Rock. This hard lava stone bed extends back from the shore for nearly a mile before it becomes invested with a soil of sufficient depth to bear the ohia, the pioneer of Hawaiian vegetation. Two miles from the seaside are forests of large trees, made impenetrable by an undergrowth of reeking vines and towering ferns, the density of the growth showing where the mountains have wrung more than an equal share of the moisture from the clouds.

The volcano, always an objective point to the tourist, can be reached by a road at Honapo, on the southeastern coast, and reached after the mariner has doubled the Cape Horn of Hawaii, Ka lae, and made a long stretch of coast exposed to winds and high swells. From thence to Hilo, the general destination of all steamers, the shore is precipitous, and above that city it is even wilder, but favoured with a generous foliage, which always exists in the tropics where rain falls plentifully.

So it is with Hawaii wherever one turns his footsteps, a blending of fertile lands and barren wastes, the first clothed with a verdure so rank and dense as to be impassable in its original state, and the other lava beds requiring the fertilisation of the atmosphere of centuries to come before producing a representative covering of Hawaiian vegetation.

The second route from Honolulu to Hilo takes the traveller to the windward of Maui and Hawaii, the picturesque side of the islands. East and West Maui are separated by a wide, arid plain, where even the hardy *ku-kui* hesitates to place foot. But on either side of this broad gateway of the mountains the scene swiftly changes to unsurpassed grandeur and sub-

linity. In the midst of these, embowered in trailing vines and gorgeous lantanas, are the clustering roofs of the sugar planters, scattered far and wide, here and there the black stack of some mill, and on the line of the railroad the hamlet of houses constituting the nucleus of civilisation. In this region is the Spreckels plantation, the largest in the world. In this scene is Kahului, an important port for the importations of this part of the island, which smacks so strongly of the Orient that the visitor soon comes to think that he is in the homeland of the Chinese and Japanese.

ROOM IN VOLCANO HOUSE.

Better than this picture is that of Wailuku, — at its back, the flowering palis; at its feet, the Pacific combing the long beach with anything but the placidity of its name, laying, with eternal perseverance, roll after roll of snowy fleece on the sandy shore; beside it, the river from which it gets its name, losing here the impetuosity of its early course as old age loses its fiery zeal of youth on nearing its earthly goal beyond; that matchless corridor of nature filled with the melody of waterfalls and the perfume of orange-flowers, Iao Valley; above, the gray clouds which give to this landscape its vesture of fadeless beauty, floating dreamily in the cerulean space.

This Mauian valley, which no tourist fails to visit, has been compared to the Yosemite of California. This is unjust to both. There can be no equitable comparison in the masterpieces of nature. The entrance to the Iaoan storehouse of wonders is through a long, narrow, massive gateway, whose perpendicular walls finally reach a height of two thousand feet, the roughness of their masonry concealed by a lacework of dark green foliage sparkling with silvery waterfalls flashing from turret and cornice. At last the passage broadens into a court of such lonely grandeur and

VOLCANO HOUSE.

majesty of architecture that the intruder instinctively shrinks back as if suddenly brought into the presence of the Omnipotent Judge. The floor, laid in lava blocks, is broken on the one hand by a deep ravine, through which flow the sullen "Waters of Destruction," while on the other, amid a setting of splintered cliffs, stands that Iaoan sphinx, the towering Needle, which far overtops Cleopatra's famous obelisk.

The early kings of Maui showed their apt appreciation of matters earthly and immortal, when they selected this as their tomb. Many of the remains of kings and chiefs have been found, grim links connecting barbarism to civilisation. A veritable burial-ground this vast natural coliseum became when the faithful followers of Kahekili the Thunderer sacrificed their lives on these rocks rather than yield to Kamehameha the Conqueror. Not until the last soldier had fallen did the battle end, and the waters of the Wailuku, breaking through their human dam, flowed crimson to the sea. Nowhere in history is there a more vivid association of the tragic and the sublime.

But Iao Valley is as famous for its prodigal display of vegetation

as it is for its traditions of human tragedy and natural sublimity. Everywhere, even to its most rugged battlements, are draperies of clinging foliage and festoons of graceful creepers, while miniature forests of guavas, overtopped by breadfruit-trees, and bordered by rose fringes, meet the eye. If there is one thing above all else in which it excels,

THE FALL.

it is in its display of ferns, no kind or species of which seem to be wanting in this gorgeous wealth of flowers and foliage. In no part of the Hawaiian Islands, famous for their ferns, are so many kinds found as are growing here. Who enters here becomes fern-wild. In the words of one of these admirers: "The tourist is pretty sure to forget everything else in Hawaii. In vain the great Pacific rolls before him

from pole to pole; he spies a fern in the cranny of the rock, and have it he must. Is he walking the high bridge which spans the deep-flowing Wailuku at Hilo (another river on the larger island by this same name), and are the deepening shades of evening lighting up the summit fires of Mamma Loa, he is lost to the rare scene if he but thinks he sees a new fern growing out of the trunk of the old breadfruit-tree. All through the lively woods of Puna, or along the forest path to Kilauea, his eyes are searching the undergrowth for his peculiar prey. And even as he comes home from Iao the terrible, the beautiful, the *only*, for surely the world has no other valley like it, his thoughts are busier with the pressed volume of leaves which he hugs to his side, than with the majesty and wonder of the scenery he has been contemplating." Still, when this innocent bewitchery has flown, when the ferns have crumbled to dust, the mind will cherish the memory of that great natural wonder of Maui, its legends and associations of another day and another people.

CRATER OF KILAUEA.

CHAPTER XVII.

THE ISLAND BUILDER.

WINDWARD Hawaii has less of historic interest than the lee side of the island; but it is far richer in its great abundance of natural wealth, which is accounted for by the fact that here there is plenty of rain, while on the opposite side of the mountains the atmosphere is dry. The country is broken and rugged, the coast line often being long ridges of rock pushing down to the water's edge, rising sometimes to the height of two or three hundred feet.

The only harbour on the entire northeast sweep of coast is Hilo Bay, or Byron Bay, as it is sometimes called, for the commander of the English frigate *Blonde*, which it will be remembered brought home the remains of Kamehameha II. and his queen, both of whom died while on a visit to England. The natives named the place Waiakea, meaning "broad water," and on the south shore, separated from

PRINCESS KAIULANI.

the city of Hilo by a crescent-shaped beach, on which the breaking surf "looks like frosted silver," is a little village by that name. The bay is seven miles wide and three miles deep, a submerged coral reef running from Cocoanut Island on the south to within half a mile of the north

side of the harbour, leaving a passage of that width for the entrance of vessels. With this protecting arm, the ships riding at anchor here are still exposed to the northeast trade-wind.

On the west shore of the harbour, on an inclined plane, amid extensive groves of cocoanuts, bananas, plantains, and breadfruits, with large sugar plantations in the background, stands Hilo, "the ambitious city." It has been aptly said that what Honolulu aspires to be Hilo is. It is also

CRATER WALL, KILAUEA.

the common expression that it rains every day in Hilo. If an occasional day is missed it is certain that this locality has the largest amount of rainfall of any part of the islands, and it is due to this fact that the country in this vicinity is remarkable for its verdure, — a vegetation which is always green.

The appearance of the town is less American than at Honolulu, the architecture of the buildings being a sort of cross of European and Oriental designs. But there is nothing sleepy about the place, and the American element predominates, though Japanese and Chinese have each got a good hold. It

has its share of public buildings, its churches, its schoolhouses, and the largest public library on the islands.

At Hilo we are on historic ground, and its meles take us back into the past many generations beyond those of Honolulu. It was here the Conqueror had one of his early battles in laying the foundation for his conquest, while many legends of the curious and mysterious beings that peopled the superstitious minds of the Hawaiians still cling to the

CRATER OF HAILAKUA, MAUI.

romantic dales, waterfalls, palis, and deep-wooded mountainsides. Only a mile from the town is Rainbow Falls, whose waters are so delicately coloured by the sun's rays that the natives believed a fairy lived in the waters clothed in the variegated hues of the rainbow.

Above the chain of sugar plantations flanking Hilo, and extending up and down the coast for sixty miles, is a wider band of open country, covered with a cloak of rank grass; still above this is a yet broader belt of forest, whose foliage presents a gradual but marked change from the verdure of the tropics to the polar clime, until, far above, the snowy crest of Mauna Kea stands boldly out against the sky.

Hawaii has the loftiest and mightiest mountains of any islands in the world. Considered from their base at the bottom of the Pacific, the two giants, Mauna Kea and Mauna Loa, lift their volcanic heads thirty thousand feet into the air,—almost six miles! The first is thirteen thousand and nine hundred feet above the surface of the sea, while its

RAINBOW FALLS, HILO.

mate is less than two hundred feet its inferior in height, and more than its equal in every other respect.

At Hilo we begin to get a vivid idea of the greatest of island wonders, the volcanoes. The beauties and picturesque features of the flora and forests, the palis and valleys, the waterfalls and coral shores, are overshadowed by the volcanic cones whose fires have illumined land and sea for ages beyond the computation of man. Its summit crater, Mokuaweoweo,

wrapped in its trailing vestment of clouds, is a grand spectacle of volcanic majesty.

Though sleeping now, the fires of this volcano are only banked, and at what moment they may break forth is unknown. Several eruptions, some of which cost many lives and great loss of property, have occurred during the present century. In 1832 there was an overflow lasting four weeks, and again in 1843 an eruption took place, when the lava flowed for a distance of twenty-five miles. Other eruptions followed, one of which, after sending out its stream of lava for a mile, was suddenly checked, the molten river disappeared into the earth, and that seemed to be the last of it. But four days later another shock shook the island to every extremity,

LAVA FLOW.

and the lava stream burst through the earth in the forest of northeastern Puna, rushing down to the sea with terrific power, overwhelming many people and destroying the country as far as it reached. In the Puna district are yet to be seen strange reminders of the overflows in the shape of lava-tree forests. The molten lava having covered the trees, often to a height of twenty feet, congealed before the encased wood burned, and now stands hollow skeletons of the greenwood hundreds of years old.

In 1859 an immense flow rushed down between Mauna Kea and Hualalai, reaching the sea at Wainanalii, a distance of thirty-three miles, in eight days. The worst eruption of which there is written record took place in 1868. This time severe earthquakes rocked the whole island like a cradle, and the southeast coast of Puna sank several feet. A fountain

of lava was thrown upward a thousand feet, which abruptly collapsed, and the mountain dome appeared clear against the sky. Five days later, on April 2d, a molten river burst through a fissure in the earth just south of Hilo with a terrific force and volume. It had travelled over twenty miles underground before finding this vent, and now four huge fountains seethed and tossed hissing lava and rocks tons in weight high into the air. From this a furious stream of red lava — a river of fire from two to eight hundred feet in width and twenty feet deep — swept down to the sea at

DESCENT AT LAVA LAKE, KILAUEA.

a rate of from fifteen to twenty miles an hour. Everything in its pathway was destroyed, and one of the fairest pastoral regions of the island transformed into a tract of barren earth. The entire southeastern coast sank from four to six feet, destroying several villages and their inhabitants. The terrified people in the vicinity fled into Hilo, and consternation everywhere reigned.

The horrors of this eruption were repeated in 1881, the outburst having begun November 5th the preceding year. Portions of the shore sank this time, while others were lifted up; tidal waves fifty feet in height swept

the coast at the engulfed places, and the people left the island as fast as they could find means. Three streams of lava flowed from the summit of Mamma Loa, one of them coming within three-fourths of a mile of Hilo. The city seemed doomed, and the vessels for Honolulu were crowded with the fugitives.

At this critical period an instance occurred which showed how deeply were still fixed the roots of the old superstition. Amid the digging of trenches, building of walls to protect the town, and the making of prayers for the deliverance of the people, a surviving sister of the Kamehamehas Fourth and Fifth, at the time living in Honolulu, declared that she could check the wrath of the goddess of the volcano. "I will save the fish-ponds of Hilo," she said. "Pele will not refuse to listen to the prayers of a Kamehameha." She went to the threatened town, and, surrounded by a large and anxious crowd of spectators, caused to be built an altar in the pathway of the approaching stream. Here she made her appeals to the goddess Pele, offered her sacrifices to the lava, and then returned to her home. As if in answer to her commands, the fiery river ceased its advance at once, and its congealed flood stands to-day as a wall to the Hawaiian belief in the power of the gods disowned more than half a century before.

Other examples of the work of Mamma Loa, though less striking than these mentioned, are recorded, while tradition kindles with cataracts of leaping fire and clouds of crimson smoke and hissing steam. There were years which had no days clear from the smoke of underground furnaces nor nights that were not lurid with flames. The Hawaiian mele tell of rivers of fire bursting out of the hot earth and flinging its liquid masses over a pali a thousand feet, in height to fall hissing and seething into the ocean. A pillar of fire six hundred feet in circumference once spouted from the crest of Mamma Loa to a distance of over a thousand feet, which lasted for twenty days, without a night, so brilliant was the scene for the distance of nearly a hundred miles! As a monument of this grand display a cone a mile in circumference was builded on its summit. Thus has been builded by this master workman an island, layer on layer, hill on hill, from the seacoast to the volcanic crest, the melting, forging, welding, casting out of the molten matter by the ever-living fires of the furnaces within the crater, while the surcharged products have been fertilised by sun and wind,

heat and moisture, until the naked and deformed rock has been clothed in a tropical verdure.

For an active example of the work of this mighty island builder we have only to turn to that lateral orifice of Mauna Loa, Kilauea. With the exceptions of the brief intervals when an overflow or breaking out was taking place on the main mountain, this crater has kept up a continual exhibition of its internal forces. For a period antedating the known his-

BARKING SANDS.

tory of the islands this volcano has been building within, laying its foundations deep down in the sea, thickening and strengthening its walls, until to-day this "House of Fire," Halemaunau, holds within its compass the greatest evidence of volcanic energy in the world. Before that it was different. Barrier after barrier must have been broken down, and deluge after deluge of the fiery floods flung out upon the surroundings, until the walls had been lifted four thousand feet above the sea, its present height. Now, when the interior has again been filled with its molten mass, and the surging waves and breakers of the "burning lake" dash over the rim of the cone, or become strong enough to break down its wall, again will the

surrounding country be overlaid with lava deposits, each layer adding so much to the present height of the mighty shell. That this stage is surely coming is foretold by the gradual rise of the successive exhibits of the "rock-consuming forces."

The only overflow of Kilauea, so far as is known, took place in 1789, while the army of Keoua was on its march from Hilo to meet Kamehameha at Kau in a decisive battle for the supremacy of the island. The course taken by this body of warriors led near to the crater, which had been silent

KAMEHAMEHA SCHOOL.

longer than any of their priests knew, and as they drew near by night the darkness was suddenly illumed with dazzling sheets of flame, and such a storm of cinders and rocks fell about the natives that they fled for their lives. Rallied by their chief in the valley below, for two days they were witnesses of a scene which carried terror to the stoutest hearts. All the time deep peal upon peal of thunder rolled over their heads, while clouds so black they darkened the sun at midday rose from the crater, lighted at intervals by flashes of lightning so vivid that they were compelled to close their eyes. At last they were urged to resume their march, but

as they were passing the volcano, such a shower of lava, sand, and rocks was flung upon them that the majority were overwhelmed, the survivors fleeing in dismay. This was believed by the natives to be a direct interposition on the part of Queen Pele in behalf of Kamehameha.

A public highway leads from Hilo to the volcano twenty miles distant

NEW ROAD TO THE FALL.

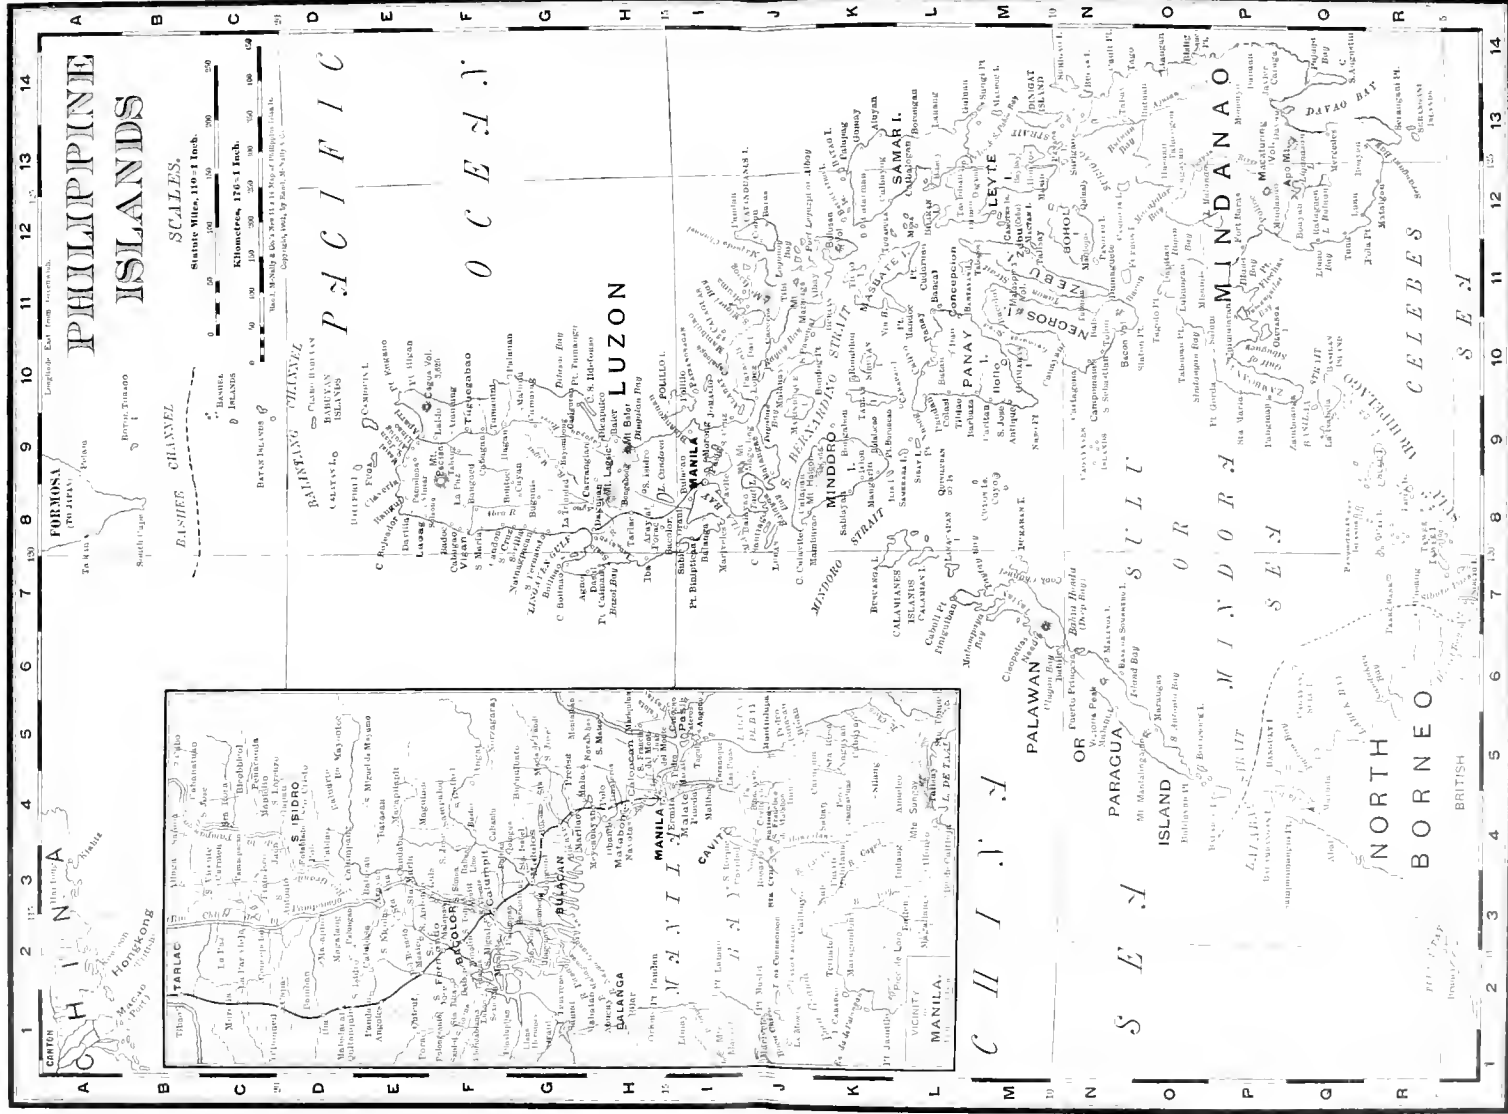

from that town, and the sightseer who has climbed the steady ascent from the sea, after passing through a typical Hawaiian forest and green fields, finds himself on the very brink of the crater without having received any warning of his approach to the "regions infernal." If he had come from Kau, on the other side, the only difference would have been an exchange

of forest for desert, of the green of the growing crops for the brown of the lava fields. If he has missed the anticipated trembling of the earth, the deep, sullen roar of the Plutonian hosts imprisoned here, the effect is the more impressive as he stands suddenly on the threshold of this "House of Fire," with walls seamed and twisted by earthquakes, and floor laid in blocks of melted stone. With feeling akin to terror he gazes spellbound on the upheavals of lurid fountains sending their spiral columns high into the air, of huge boulders tossed on the crests of crimson waves; on tides of liquid flames surging against the sides of this burning lake; on ten thousand torches lighted by no human hand, fading and rekindling with startling rapidity; on the areas of boiling lava, now rising on the swelling flood, now sinking deep into the bottomless regions from whence came all this molten mass, — on all this and more that cannot be described, until he feels, as he never has before, the power and the presence of the infinite builder of the world. Before this sight all else on earth pales into insignificance and is forgotten.

As this is written, report comes that Mauna Loa is again in convulsion, that Hilo is once more threatened, and the people are seeking safety in flight. Shocks of earthquake shook the island for twenty-five miles, and were felt in Honolulu. There are two streams of lava flowing, one toward Kau, and the other in the direction of Hilo. The damage to property has already been considerable. So it will be until the volcanic forces which have been building the islands shall be spent, and Hawaii, like her sister islands, be emancipated from its thralldom of fire. Then, indeed, with its happy people, will it be the Paradise of the Pacific.

THE FAR EAST.

THE PHILIPPINES.

CHAPTER I.

THE PEARLS OF THE ORIENT.

MANY geologists believe that a vast continent, rivalling in area any now existing, once extended from New Zealand on the south to the Mariana (Ladrones) and Hawaiian Islands on the north; from the most eastern of the Polynesian Islands to the China and Sulu Seas on the west. According to this theory, the islands of the South Sea, including the extensive Archipelago of the Philippines, are the uplifted mountain peaks and highlands of the submerged hemisphere. Granting the plausibility of this assertion, the evidence remains that a large percentage

of these islands are of coral or volcanic formation. Those under consideration belong largely to the latter class.

So little is actually known of the entire Pacific coast, that only an approximate estimate can be given of the size and situation of the Philippine Islands, variously supposed to number from six to twelve hundred. A conservative calculation places the land area at a little less than 115,000 square miles, equal to the State of Arizona, or nearly the same as the combined areas of the six New England States and New York. This collection of fragmentary lands, lying to the southeast of

MAIL STATION ON BAY OF ULUGAN.

Asia, extends from $4^{\circ} 45''$ to $20^{\circ} 38''$ north latitude, a distance of over a thousand miles; and from 117° to 126° east longitude, or six hundred miles east and west.

The entire surface of the numerous islands is broken, and the coast-line irregular, the seas cutting in and making frequent bays, gulfs, isthmuses and peninsulas. The only plains are to be found along the rivers near their mouths, except the intervalles between the mountains, which are inclined to trend north and south. These lowlands are rich with the alluvial deposits of ages. Between the islands are long stretches of canals and passages, though not many of them are navigable. Owing

to the existence of volcanic fires and the occasional overflow of hot water from the boilers of these mountain furnaces, coral growth is uncommon, although nearly all of the other islands in the South Pacific abound in its formation.

The principal islands are twelve in number, in size and situation as follows, according to the Spanish official returns: Luzon, the most northerly, and containing the capital of the Archipelago, Manila, having an area of 41,000 square miles, equal to the State of Ohio; Mindanao, the most southerly, with an extent of 37,500 miles, a trifle larger than the State of Indiana; Samar, on the central east, 5,300 miles in area;

VOLCANO OF APO.

Panay, near the centre of the group, 4,600 miles; Palawan (Paragua), a long strip on the southwest, 4,100 miles; Mindoro, on the central west, 4,050 miles; Leyte, 3,090 miles; Negros, 2,300 miles; Cebu, 1,650, Masbate, 1,318, Bohol, 925, Cantanduanes, 450 square miles each. The two first named are probably as large as all the others combined.

Everywhere is seen the evidence of the volcanic formation of the islands, and a continual change in the topography of some of them is yet going on with surprising rapidity. Open water now exists where a few years since were inhabited islands. On the other hand, habitable lands now rise above the surface of the sea where not long ago the brown-skinned boatman plied his slight craft along an uninterrupted course. Many of the islands, taking Cebu for an example, wear yet

their caps of limestone, indisputable proof of their birth in the sea. On others are the cones of extinct volcanoes, lava beds, and the boiling geysers, living reminders of those days when the ocean for thousands of miles was lighted by these internal furnaces. Nor are all of the volcanoes burned out, as witness that giant Apo on the island of Mindanao, with an estimated height of over ten thousand feet; on Negros the Canloón, measuring over eight thousand feet, while the active volcano, Mayon, on Luzon, is the grandest specimen, rising

VOLCANO OF MAYON, LUZON.

to a summit of eight thousand and two hundred feet. The latter has a perfect cone in constant activity, its last eruption having taken place in 1888. The premium of damage done within the history of man, however, belongs to Taäl, which lies in the midst of a fresh-water lake, thirty-four miles south of Manila, though sixty as it is reached by travel. This famous volcano has been active from time immemorial, and its history is as closely associated with the island as Vesuvius is with the fortunes of Naples. During the eighteenth century no less than five noteworthy eruptions occurred, the most startling of them

being in 1754, when the town of Taäl was entirely destroyed, and several other places suffered seriously. Property fifteen miles away was laid in ruins, and flying cinders fell in Manila. The outbreak lasted for eight days, which were as dark as midnight, so that the inhabitants of the distant capital dined at midday with lighted lamp, and plodded blindly along the streets amazed and terrified, believing that the end of the world had come. The smell of sulphur and decaying débris lasted for six months, when such a malignant fever followed as to carry off half of the inhabitants of the province. The road from Taäl to Balayan was impassable on account of the lava, and the town which had been the capital was destroyed with all the government buildings. Batangas, on the coast, then became the centre of govern-

LOOKING UP PASIG RIVER AT PRETIL JUST ABOVE MANILA.

ment. The eruption continued for six months and seventeen days. At its last explosion this volcano blew off its head, and now stands less than nine hundred feet in height, the lowest active volcano in the world.

The Palawan group on the southwest is free from volcanic signs and from earthquakes.

Besides the volcanic cones and peaks, there are many mountains, some of respectable height, among them being Mt. Halcón, on the island of Mindoro, 8,900 feet; San Cristobal, Luzon, 7,400 feet; Isarog, Luzon, 6,424 feet; Giting Giting, Sibuyan, 6,642 feet; Banajao, Luzon, 7,333 feet. The mountains of this class are generally covered with magnificent forests of stately trees, set off with the rich foliage of the tropics and the bright-coloured flora of a sunny clime. Exceptions to this are the

bare crowns of Mt. Haleon and Giting Giting, the two like grim giants standing, amid broad vistas of tropical country, teeming with the prodigal gifts of a nature which knows no bounds to its rare bounties, with uncovered heads. Like many of the other islands of the South Seas, it would seem as if the dispenser of earth's gifts let slip here the string from his horn of plenty to make this a modern Eden.

Rivers and small streams are numerous throughout the islands, many of the larger being navigable. Among these are the Rio Pasig, which has its source in the Bay Lagoon, and after flowing nineteen miles dis-

NATIVE VILLAGE, ISLAND OF NEGROS.

charges its water into Manila Bay. The largest, the Rio Grande de Cagayan, rising in the mountains of Eastern Luzon, flows nearly the length of the island, or two hundred miles, and falls into the China Sea. It annually overflows its banks, and along its course, as well as that of the Pasig, are found some of the richest tobacco districts in the islands. The Rio de Grande de la Pampanga is another noticeable stream, threading great tracts of forests, extensive fields of rice and plantations of sugarcane, thrifty villages and towns, in the fertile and beautiful valley which gives it its name, and after a pleasure trip of thirty-eight miles enters Manila Bay by twenty creeks. The Rio Augusan, longer than any of them, cuts Mindanao Island almost in twain, though navigable for less

than four miles. The Abra, rising in the slopes opposite to the Agno Grande, after a race of nearly ninety miles over the sand-bars of Butao, Nioig, and Dile, surrenders its floods to the China Sea. There are many others more or less known.

There are several hundreds of islands in the Archipelago covered with thousands of square miles of tropical forests, abundant with valuable woods, such as cedar, ebony, ironwood, mahogany, logwood, sapan-wood, gum-trees, and fifty other kinds of woods unknown in America. In certain localities gutta-percha is found, while in others is the *cocos*

BAMBOO BRIDGE, ILOILO.

nucifera, every part of which, including trunk, branches, leaves, fruit, shell, and husk, has a value. Bamboo and *areca* palm are common and of great utility. The *banare* and *malare* are two woods prized for their properties of resisting the action of water for centuries.

The most attractive and, next to the coconut-palm, most useful tree is the bamboo, growing on the plains, along the banks of rivers, under the shadows of boundless forests, around the homes of the natives, in fact everywhere except in marshes and on the hills. With light, feathery crests that sway gracefully in the slightest breeze, the more majestic rising to the very dignified height of fifty feet, they give a matchless

charm to the forest scene. Their slender trunks set in joints, each section strengthened by an inside web, present an odd array of forest pillars as seen in a collection of any size. Besides these there are many smaller varieties, which the natives cultivate for the young shoots that always command a good price in the market. Bamboo is a great building material in the construction of huts, houses, and even churches, and from it are made the mats, chairs, baskets, vessels for holding liquors, measures for grain, in short, every kind of household utensil needed, organs and musical instruments in general, while outside it is made into carts to move merchandise, rafts to float on the rivers, palings for carrying

CONSTRUCTION OF A PHILIPPINO HOUSE.

poles, blow-pipes for furnaces, hats to be worn on the head of its ingenious worker, until it seems to be in everything small and great, the most valuable of all in building bridges hundreds of feet in length and so strong that a drove of buffa-

loes can pass safely over it. The leaves are eaten by horses and cattle, and its tender shoots by man. In a certain variety of the cane is found a stone which the native believes is a panacea for many evils of the flesh. In another kind is a sticky substance good for inflammation of the eyes, which is very prevalent under the rays of the torrid sun.

If not applied to as many uses as the bamboo, the cocoanut-palm is of greater value, it being the leading source of income to the native inhabitants. Plantations of these trees are found scattered all over the Archipelago. The fruit is always in demand for the foreign market, and, as with the bamboo, every part of the tree is utilised. From its smooth body the native constructs the framework of his dwelling, covers it with its leaves, and furnishes it with chairs, divans, and tables made from its

SUSPENSION BRIDGE, CONNECTING OLD AND NEW MANHUA.

wood. The mats upon which he sleeps, the brushes that he uses, are made from its fibres. From its nuts he gets his meat, and a drink called out of courtesy milk, which becomes a good vinegar if left to become acid, while from the shells of these he carves his household utensils. From its sap he obtains an oil which is indispensable at home and in great demand abroad. In the temperate climate it becomes a solid, and is converted into soap and candles. On the islands it remains in a thinner state, and is used for lighting his home, cooking his food, and is an excellent lubricating substance for machinery. In that land of perpetual fear of an outbreak from an earthquake, the matter of light is of no small importance. In every hut and house a small vessel is partially filled with water, on which a quantity of cocoanut oil is poured, and a wick floating on top is lighted and kept burning from twilight until dawn, a tiny firely lamp,

BAMBOO YARD.

but very useful at the least warning of danger. Besides all this, obtaining from its flowering stalk a delicious beverage he calls *tuba*, and clothing his body from raiment made of its fine fibrous particles, the Philippino owes his undying allegiance to his beloved palm.

An exceedingly useful and common plant is the *bejuco*, or rattan, a sort of bush rope, which has been known to grow to the great length of one thousand feet. It is nothing unusual to find a specimen three or four hundred feet long. The application of this plant is almost as numerous as that of the bamboo, and it is often used in conjunction with the other. It is the natural cord with which to bind together whatever has become broken or needs putting together in the home, on the plantation, in the street or forest, shop or warehouse. The thickest is used for making rafts

and cables, and with the bamboo helps to make suspension bridges. It has delicate fibres out of which cloths are woven and hats made.

Among the fruits the mango ranks first. It grows from four to six inches in length, is oval shaped, flattened on both sides, and yellow in colour when ripe. It has a large stone in the centre, and the meat is rich and delicious. The tree grows to great size, a majestic specimen of the wealthy woods in its dark green foliage, and especially beautiful during its flowering period. It is nothing unusual to get three pickings of fruit during a year, and two are the rule.

The banana grows wild and is cultivated with profit, there being as

NATIVE HOUSES.

many as fifty varieties. The banana (*Musa paradisiaca*), according to an Arabic legend, is believed to be the plantain from which Adam and Eve made their aprons, as well as having been the forbidden fruit of Eden.

The *papaw* tree also grows wild here. This attains a height of twenty-five feet, and has leaves from two to three feet in length. The fruit, of a deep olive-green until ripe, when it is yellow, is in shape and flavour like the melon, very delicious in its native land. Guavas are found wild in great abundance, while tamarinds, with a fruit resembling beans, abound plentifully in a wild state. There is also a native fruit, bearing a delightful aroma but flavourless, which has the appearance of our peach. Pine-apples grow abundant in the southern islands, but the fruit is not as fine as in other countries, and, being dangerous to eat in that climate, is not

cultivated, except for its leaves, which have delicate fibres utilised in the manufacture of a costly texture known as *pinat* and worn very much by the women of the wealthy class.

Two kinds of lemons, the Pomelo orange, of very large size, and two or three smaller varieties, the custard apple, citron, breadfruit, strawberry of an inferior size and quality, with other fruits peculiar to the tropics, all flourish here. The *durien*, about the size of the common pineapple and delicious eating, but bearing only once in twenty years, thrives in the western islands.

Numerous plants and herbs of medicinal value grow almost everywhere,

VILLAGE ON MINDANAO.

the most commonly used remedy being the bark of the *dita* tree, which is used by the natives in case of fever. From this is obtained an alkaloid called *ditaine*, which resembles in a mild degree quinine. From the flowers of the *ylang-ylang* is extracted a highly prized perfume.

The flora of the islands is rich in variety and magnitude. A general description of this, any more than that of the forests, cannot do it justice, or convey to the imaginary beholder but a slight portion of the exquisite pleasure of him who gazes on the virginal landscape basking under the magical influences of a tropical climate. On the island of Mindanao, which

means "Man of the Lake," grows the largest known flower, which is often from three to four feet in diameter. The Philippines have few, if any, of the barren lava plains of Hawaii; none of the bare, desolate shores of northern coasts; but from the great storehouse of natural treasures of Luzon, the largest and richest of these pearls of the Pacific, to the hundreds of smaller gems, all resplendent in a vegetation which clothes not only the plains and the lowlands but the mountains and the seashores

GENERAL VIEW OF ILOILO.

with a verdure of many hues and never-fading gloss, here the florist finds his paradise, and the botanist his wonderland.

The staple food raised is rice, though in some localities maize holds this a good second. Potatoes, peas, and wheat are cultivated successfully on the highlands. So rapidly do crops grow and mature that it is a common sight to see three stages of growth existing on the same plot of land, the planting, cultivating, and harvesting going on in alternation accordingly as the work had been begun.

The extensive coast lines of the islands afford many good harbours, the

best known of which are Manila and Sual, on the west shore of Luzon; Iloilo and Cebu, the ports of cities by those names situated respectively on the east side of the islands of Panay and Cebu. The first named is one of the finest in the world, and is about one hundred and twenty miles in circumference. In stormy weather safe anchorage is to be had off Cavite, about eight miles by water to the southwest, which place has become noted as the scene of Admiral Dewey's first victory in the capture of the capital. Iloilo, next in importance, is about two hundred and fifty miles in a direct line from Manila. Studded with bays and creeks forming natural harbours, still the western coasts of Cebu, Negros, Mindoro, and the Palawan

MANILA STREET, RAINY SEASON.

Islands have no safe anchorages for any but small craft, the water being shallow, with many dangerous reefs.

While some of the streams reach the sea at flat or swampy places through many mouths, others have cut their way through passages down precipitous hillsides, making deep, narrow defiles with steep banks not unlike the picturesque fjords of Norway, only here, instead of naked cliffs of rocks, are earth-cliffs clothed with the glossy foliage of a vegetation favoured with the warmth and moisture of the equatorial zone.

Owing to the great length of the group, which extends from within about four degrees of the Equator to within the same distance of the Tropic of Cancer, the islands have considerable variety of climate, though

without losing its tropical influences. The Spanish ironically described the seasons as "six months of mud, six months of dust, six months of everything!" In fact, there are what are denominated the "wet" and "dry" periods, with a gradual change from one to the other. Taking the vicinity of Manila as an example, the hottest season is from March to June, the highest temperature coming in the month of May, before the rainy season sets in. The thermometer then registers from 80 to 100 degrees in the shade. The coolest time is in December and January, when the temperature stands from 60 to 65 degrees at night, and seldom above

MANILA STREET, RAINY SEASON.

75 in the daytime. From November to February the sky is bright, the atmosphere cool and invigorating, the weather delightful.

The northern islands lie in the track of the typhoons which sweep over the China Sea, and may be expected any time between May and November, being the most frequent during July, August, and September. In 1875 a storm of this kind destroyed nearly four thousand houses and killed three hundred people. Earthquakes are of common occurrence, and often do vast amounts of damage to property and cause many deaths. One in 1863 destroyed the larger part of Manila, and killed or injured over three thousand of the inhabitants.

During the heavy rains the rivers are swollen so as to overflow their banks, and the lakes overrun the surrounding country, the floods often

doing great damage. A tidal wave in 1897 swept over the island of Leyte, causing extensive destruction of life and property. The rainfall at Manila averages from seventy-five to one hundred and twenty inches a year, while in the southern portion of the Archipelago the medium is one hundred and forty-two inches, or almost twelve feet. From local reasons considerable difference is often known, and the earth of one island may be dry and parched for long intervals, while another in sight may be deluged with rain. A mountain range sometimes makes a great variation, while those of the Archipelago bordering on the Pacific have a climate quite the opposite of those next the Indian Ocean. If one cared, he could move about so as to escape the rains altogether. Though fever, malaria, and other diseases, peculiar to a tropical clime are prevalent, the Philippines are not as unhealthy as might be expected. The foreign-born citizen finds the heat very oppressive, and under its influence he soon finds his northern energy slipping away from him. Women and children feel most the dangers of the climate. Still, with good sanitary conditions about the towns, and a clearing away of large tracts of the dense and malaria-breeding forests, the Archipelago will, no doubt, show a far better health condition.

The islands have been aptly termed the "Pearl of the Orient," but it is an unpolished jewel, which only American energy can bring to its proper lustre. Their geographical position being such as not to bring them in the direct line of communication with the Far East, as has been the case with the Hawaiian Islands, the Archipelago has long remained unrevealed to the rest of the world. It has been a realm by itself, an object of strange accounts and mysterious traditions even as known at Hong Kong six hundred miles away. Here, unknown and undreamed of elsewhere, have been enacted over and over some of the most cruel wrongs and darkest tragedies in the checkered drama of colonisation, Spanish secrecy and resistance to progress always holding in the dark this land of the distant seas.

TYPES OF MALAYS.

CHAPTER II.

THE PEOPLE OF THE PHILIPPINES.

EXTENDING as the Archipelago does over a vast extent of surface, it is not strange that the islands are inhabited by many races of people. No better beginning into a description of their ethnological relations can be made than by dividing them into four distinct races, leaving for further consideration, if one cares to continue the subject to completion, nearly a hundred subdivisions and tribes of mixed blood.¹

The *Actas* or Negritos ("little Negroes"), which are found in the mountains and backgrounds of every peopled island, are no doubt the descendants of the original inhabitants,—the one race holding supremacy over the entire Archipelago before the invasions of the foreign elements. During the centuries of Spanish occupation they have changed the least of any race, and whether it was Moslem, Malay, Chinese, Japanese, or Spaniard, they have never been conquered. This has not been from any great prowess as warriors, for they are cowardly. Instead of standing up in a square fight, they retreat to the dense jungles, and from behind breast-works of trees shoot down with poisoned arrows whoever has attempted to invade their rendezvous. As the tide of civilisation approached, they retreated into the darker depths of the wilderness. This situation has existed longer than written history can show.

¹ Such readers are referred to Wallace's "Malay Archipelago."

WATER FRONT AT MANILA.

The Negrito is dark-skinned, many of them as black as a true Negro, of which they are doubtless descended; his hair is short and curly; he is slight in stature; is content to clothe his body in a single garment made of the bark of a tree and covering only his loins; he is a fleet runner, and can climb a tree like a monkey; he is low in intellect, and cannot be domesticated to an extent which will make him a trusty servant; in religion he has a sort of spirit worship, which teaches him to be respectful to his friends and reverential to the dead. The man is far from good-

NEGritos.

looking, though hale in appearance until he begins to show his age, which is early in life, when he soon becomes emaciated in person.

The woman is not superior to the man, and is satisfied if her dress is simply a short skirt about the hips. The Negrito maid, with her flashing black eyes, and coal-black, closely knotted hair, and well-rounded figure, is picturesque if not pretty; but the matron of a few years later is far from attractive.

They live in bamboo huts, and subsist mostly on fish, nuts, and mountain rice, alternated with beef when they can find a chance to steal the cattle of the planters. They make a feint at agriculture by scratching the surface of the ground and scattering about a little seed. If it grows

it means more rice for them; if it fails, then a little more stealing will be required. In this respect they are disagreeable neighbours. The whole race is decreasing slowly, and before the advance of a progressive civilisation must eventually fade away.

The Negritos were formerly masters of the island of Luzon, and held power over the Malays, who came first about eight centuries ago. As the

NATIVE WARRIOR FROM INTERIOR OF MINDANAO.

latter race increased, they were forced to retire to the highlands and leave to their usurpers the valleys and rich lowlands along the coast. So far and successfully did the newcomers spread out that to-day their descendants number not less than five millions, and are the most intelligent of the islanders. According to tradition, their early ancestors emigrated from the Malay peninsula, south of Asia, and first settled on some of the larger islands to the east of the continent. They found already there the Polynesian race, but these latter, unable to cope with them, escaped to the smaller islands of the Pacific, going as far north

as Hawaii. The two races are entirely distinct. From Sumatra, Java, and other islands, these Malayans eventually reached the Philippines, settling principally on the two largest. In the course of time they were overpowered by the Spaniards, whose excessive tyranny has so tempered their warlike spirit as to make the present Tagalogs the mildest and most submissive of the semibarbarous races.

The men are seldom much above five feet in stature, of supple figure,

bright eyes, high cheek-bones, and countenances that display very little personal spirit or character. The richer class dress showily in trousers, with blouses worn outside, both garments made of Manila hemp, or *abacū*. Another suit of silken texture is made of a fabric woven from the leaf of the pineapple, and called *pina*. Of a white or vivid yellow, this is often interwoven with blue or green silk, and sometimes embroidered with flowers. They encase their feet in sandals or patent leather shoes, unless the owner chooses to go barefooted, which is not considered bad form. A hat plaited from the *uito* or *liana*, ornamented with a wide band of embroidered cloth, or fancy work in silver, covers the head. His poorer brother imitates his style, but his clothes are made of a coarser material, and there is more likelihood that his feet will have no shoes.

The women are better natured and more vivacious than the men, but as a rule are not pretty.

Like the females of all warm climates, they have a tendency to obesity as they grow older, though they are more industrious than their male consorts. Bright colours delight her, a skirt of burning red, with a many-hued undervest, over which is worn the waist of silken texture, dark, and ornamented with the gay and beautiful *pina*, fringed with embroidery, thrown lightly across the shoulders. The raven hair falls from under a snowy mantle, while the toes, but not the instep of the brown foot, are encased in

PHILIPPINE FRUIT GIRL.

a heelless slipper. The Philippino is an apt scholar, but indolent by nature ; loves music, but is sadly lacking many of the finer sensibilities of a higher civilisation. Long centuries of Spanish oppression leave him discontented with his lot, and ever looking for an opportunity to strike a blow in retaliation, as well he might after the teachings along such lines for many generations. A voluntary act of yielding in any way to him, however

A WEALTHY HALF-CASTE PHILIPPINO LADY.

well meant the intention, is looked upon by him as an indication of weakness on the part of his benefactor, and a fitting opportunity to move on the aggressive. The Spaniards long since learned this, and it has had something to do with their relentless measures.

The race is strong in family affections, loves children, but the majority are superstitious to a great degree, though the only people on the islands who have the credit of being converted to that Christianity spread so assiduously by the followers of Arnetá, the pioneer of the Catholic Church in the Philippines. Among the ideas

of their original religion is a belief that when the person is asleep his soul is absent from his body, and to awaken a sleeper suddenly will not give the spirit time to return to its proper place. The Philippino has been described on the whole "as an incomprehensible phenomenon, the mainspring of whose line of thought and the guiding motive of whose actions have never yet been, and perhaps never will be, discovered." After years of apparent faithfulness, he may, without any valid reason, turn against his master, hesitating at no crime. This trait may have been born inherent in

him ; it may have been largely acquired from the influences surrounding his unhappy life.

Above the pure native in intellect, better looking, more interesting, in one case with a higher grade of morality, and with greater influence in business and politics, are two classes of half-breeds, or *mestizos*. The first and better element of these are the descendants of native mothers who married Spanish husbands. This is really a fine race, though, if the alliance with European blood is not kept up beyond one generation, the distinctive traits begin to fade away. As a rule the mestiza girls are very beautiful, with soft complexions, white teeth, bewitching black eyes, graceful deportment, and they are noted as fine dancers. Many of them are educated in the convents, and have good musical talent, which is everywhere encouraged.

MESTIZOS.

The second class of mixed bloods are of Philippino-Chinese extraction, native mothers and Chinese fathers. These are called *mestizos-Chinese*, and the men of this race are among the shrewdest merchants and most skilful mechanics, but

they have been troublesome factors in the affairs of government, and more than all other classes combined have been instrumental in the revolts and uprisings which have been so frequent. They were the original "rebels," whom others, equally dissatisfied with Spanish rule, hesitated to join in a fight for freedom, fearing them more than the Spaniards.

About the beginning of the sixteenth century, or just before the Spanish discovery of the islands, a warlike, piratical people overran the island of Basilan, in the southern part of the Archipelago, and soon spread to the adjoining islands, sweeping them clear of the native race wherever they

went. The Spanish called them *Moros*, or Moors, and they are supposed to have been descended from the Mussulman Dyaks of Borneo. Their history here is one almost continual warfare with the native races and Spaniards, until the latter were glad to compromise with so formidable an enemy. For over two centuries their war-junks carried terror to the inhabitants of all parts of the Archipelago. Whole towns were razed, plantations ravaged, and the people driven back into the forests. So

SULU PRAU.

complete was their work of devastation that dire poverty followed in the paths of their raids.

But it was not alone for plunder that this was done. When the Church of Spain undertook to convert to its following the fanatical Moslem, it stirred up a people it could neither persuade nor put down. The hatred of the Mussulmans for the Christians was equal to that of the followers of Mahomet in the religious wars which deluged Europe in holy blood. Here, in the South Seas, was enacted the same bitter strife, and, as there, no real victory was gained on either side. Foreman, in his "History of the Phil-

ippines." says: "From the time the Spaniards first interfered with the Mussulmans there was continual warfare. Expeditions against the pirates were constantly being fitted out by each succeeding governor. Piracy was indeed an incessant scourge and plague on the colony, and it cost the Spaniards rivers of blood and millions of dollars only to keep it in check." In the present century, the Mussulmans appeared even in the Bay of Manila. There are persons yet living who have been in Mussulman captivity. There are hundreds who still remember with anguish the

SULTAN OF SULU INTERVIEWING EUROPEAN VISITORS.

insecurity to which their lives and property were exposed. The Spaniards were quite unable to cope with such a prodigious calamity. The coast villagers built forts for their defence, and many an old stone watch-tower is still to be seen on the islands south of Luzon.

This race now extends over Mindanao Island and the Sulu group, about ninety islands in all, with a population of 110,000 on the Sulu Sultanate alone. The population of Mindanao is unknown. There are about 125,000 of the faith in Luzon.

These people are generally rather prepossessing in appearance, the men very robust, lithe, and active. Brave and bold when occasion demands, they

are yet careful and conservative in their plans. They are fearless, skilful navigators, and, armed with swords, lances, *krises*, their bodies protected with shields and armour, all of their own make, are formidable adversaries in battle. All males over sixteen years of age are obliged to bear arms, and they have an army of over twenty thousand on the Sulu group alone.

Fond of bright colours, both men and women dress somewhat elaborately.

MOHAMMED, SULTAN OF SULU.

The former wear tight-fitting breeches of a scarlet hue, a waistcoat, and jacket with small sleeves, all three garments decorated with rows of bright buttons, and he covers his head with the Turkish turban; the latter encase their bodies in a glove-fitting bodice, covered with arabesque designs, and which is met by the baggy dual nether garments that seem a part of their faith. On their heads they draw a peculiar hood, called the *jabal*, and made with a long skirt which falls down the sides when not held up under the arms. The Moros have a legend that

man was a giant in his early days, and that he is gradually growing smaller, though his mind increases in power as the body decreases. Their staple crops are rice, sugar-cane, maize, indigo, and coffee. The principal export is pearls, to secure which they often dive a hundred feet.

The Sultan, or "Stainless One," is the despotic head of the State and Church. His palace, constructed of wood, stands in the centre of the new capital of Maybun. He displays considerable pomp, and lives in ease and luxury, surrounded by a throng of sultanas. This power holds many slaves,

NATIVE MILK PIDDLES IN THE SUBURBS OF MANILA.

captives obtained in their wars, or children born of them. With this fanatical people it would seem the American government is likely to have its most serious trouble, when brought into direct contact with them. At present an armistice or compromise has been arranged by which they are to remain under their local authority, but acknowledging fealty to the republic. How long this will last or how creditable it is to republican ideas of government remains to be seen.

On the southern islands are the *visayas*, a half-breed people composed of the bloods of the Tagalogs and the Mussulmans or Sulus. They are a sullen, savage, thievish race, whose ancestors were among the criminals of the lowlands of Negros and the sugar plantations of Luzon, driven out by the Spanish and married to Sulu women. They appear to have inherited all of the worst qualities of their progenitors without any of their better natures. The Spanish have had serious trouble with them, and the wars are records of the most cruel deeds on both sides.

IGORROTES.

Among the less numerous races may be mentioned the Gaddanes, of the northwestern part of Luzon. This is a dark, picturesque people, wearing long hair, taking the scalps of their victims in war, and offering them as a marriage dowry and proof of their valour. They still meet annually under the bursting buds of the fire-tree, and offer their collections of trophies of war with rude ritual rites to their gods.

Another race still unsubdued is the Igorrotes, of the northern half of the same island. These people are copper-hued, like the North American

Indians, and, like them and the Gaddanes, take the scalp of those they slay in battle. They are pagans of a fanatical type, but conceal their gods and graven idols in the caverns of the mountains.

The Tinguianes live in the territory of El Abra, in Luzon, and, while professing a certain sort of allegiance to a civilised government, hold their privilege to live under laws of their own making and chiefs of their own race. The head of the village, on accepting his office, swears himself by the following queer oath: "May a blast of the tempest wither me, may the lightning kill me, or the alligator eat me while I sleep, if I am unfaithful to my trust."

Even a partial enumeration of the different peoples, each with its peculiar characteristics, would not be complete without mention of the Chinese, who have come early and late, of whom there are now, in spite of many wholesale massacres and most violent measures of suppression, something like a hundred thousand. They have

IGORROTE PIPES.

secret organisations, guilds, and courts, whose objects are to afford them such protection as may be secured from a power unfriendly to them, while they have representatives in the government. They have intermarried to a considerable extent, and in this way more than all others gained a foothold. As I shall treat of them quite fully in my description of the Spanish conquest, no more need be said here.

The population of the Philippines is supposed to be in the vicinity of eight million, the bulk of which belongs to the native element, with its eighty odd tribes scattered over a hundred islands. He who would learn very much of them from personal observation must travel extensively, and often with every precaution against danger to his life. It will be observed from what is written that the Philippinos, or descendants of the Malays, are the only race or tribe the Spanish have succeeded in bringing into anything like a state of subservience to the methods of a civilised government and church. But the light of Christianity fell on them like

the burning embers of freedom smouldering to darkness, and the powers of the state were huge pillars raised on the ruins of that liberty so dear to them. They followed but slowly and with averted faces the way marked out by the black-robed Fathers of the Far West, with eyes closed to the prospect ahead, and the dark Inquisition behind.

CHAPTER III.

THE ANIMAL KINGDOM.

UNLIKE the island of Borneo, the Philippines are not specially favoured with animal life. There are few wild creatures, and only three that are really antagonistic to human life. These are the wildcat, wild boar, which the natives hold in considerable fear, and the *carabao*, a species of buffalo, dangerous only when aroused. Wild boars are found the most numerous on the island of Tawi Tawi. Domesticated hogs are to be found in every native village, looking very much like their kindred of the wilds. Three or four varieties of deer roam the mountain sides, affording excellent hunting for the sportsmen and a good portion of the meat eaten. Monkeys abound in the forests, and among the several species is one of a pure white.

The most important animal is the carabao, or buffalo, which is easily domesticated if caught young. Stalking the wild carabao by moonlight, creeping upon the unsuspecting brute from behind a tame animal of its kind trained for the purpose, is considered the rarest sport of the Philippine huntsman. When close upon his game the hunter leaps from his covert, and with his *machete* (stout knife) hamstringing his victim with two swift, unerring blows. He knows that if he misses his life will have to pay for his mistake, for the wounded buffalo is a terrible enemy. Its short, sharp horn is a weapon to be dreaded, and there is nothing short of death or victory in a fight with a carabao.

In its domesticated state the carabao becomes the plough-horse of the primitive planter. Hitched to a plough of the most crude pattern, being simply a long sharpened stick for point, fastened by rattan thongs at an angle of forty-five degrees to a pole which answers for beam, with a perpendicular piece lashed on for a handle, it moves slowly over the ground. He is faithful to the slightest command, but cannot work during the hottest part of the day, and he cannot live without his daily mud bath.

He performs his ablutions by throwing himself on one side in some miry pool, rolling and plunging about until he is plastered with the sticky substance. When he has dried himself in the sun he looks like an ugly image of clay in his mud shell. Nature in this way provides him with a means of safety from the stings of millions of insects which swarm about him as he feeds among the rank vegetation. He is an amphibious animal, and gets a considerable part of his food from a plant growing at the bottom of streams. If docile and attentive to his native master, he

CARABAOS TRANSPORTING ARMY STORES.

has an overmastering fear of foreigners, and the mere sight of a white man has been known to stampede every buffalo in town. The meat of the carabao is eaten by the natives.

Besides the species just described, there is another kind of buffalo on the island of Mindoro, which is a curious little animal living only in the dense jungles, and called the *timaran*. It is a mortal enemy to the carabao, and will attack the other upon sight, generally coming off the victor. Its flesh is good eating, but it cannot be tamed, and is seldom hunted, on account of its ferociousness.

Wild cattle are found on several islands, and the domesticated kine are extensively raised for beef, which is of poor quality, owing to a certain herb on which they feed. What is true of the beef applies to the flesh of fish and fowl, all of which has a disagreeable taste to the American and European. The cattle are a small, humpbacked variety, on a few islands used for draught purposes. Milk is everywhere very scarce, and fresh butter and cheese not to be had.

Though not natives, wild horses are met with in different parts of the Archipelago. They are descended from the Andalusian horse and the Chinese mare, mere ponies in size and not used as beasts of burden. Still,

VILLAGE ON THE ISLAND OF GUIMARAS.

they are strong for their size, and quite fleet of foot. They are now made to draw the street-cars of Manila, and, sure-footed and swift, nothing save a strong head wind seems capable of stopping them, but traffic has to suspend while the gale lasts.

Other domestic animals are dogs, cats, pigs, goats, and monkeys, all of which are to be seen in a wild state. The first two are inferior in size and looks to American cats and dogs, the former being marked by a peculiar twist to the tail.

Of reptiles and venomous insects there is a surfeit. The most prominent are frogs, lizards, snakes, centipedes, enormous spiders, tarantulas,

hornets, beetles, ants, horned toads, and huge bats in numerous colonies. Some of the last named measure five or six feet from tip to tip of their wings, and they have bodies as large as cats. Europeans hunt them for their soft skins, while natives eat their flesh. Excepting the *manapo*, which haunts the rice-fields, and whose bite is fatal if not immediately cauterised, the snakes are usually harmless. Mighty boa-constrictors are the kings of serpents in the Philippines, but are seldom seen, and then not so much dreaded as the *manapo* with its deadly sting. Leeches are

STREET-CARS IN MANILA.

another disagreeable inhabitant of the wild woods and stagnant pools, leaping upon the intruder when least expected, beginning to fill up on the blood of its victim at once. Crocodiles of great size swim in the bodies of fresh water and streams, though until one has tasted human flesh it is not much feared. But once one of them has broken the rule and becomes a man-eater, he is the most dreaded creature known in Mindanao. Cobras are occasionally seen in Samar and Mindanao, while small-sized pythons are found almost everywhere, and are kept for sale as rat catchers in the larger towns.

Ants and mosquitoes are the greatest pests of the islands. No bed is lacking its mosquito net, without which there would be no sleep for the occupant. There is a species of white ants which feed upon dry wood in every shape and condition, eating into furniture, household utensils, and

YOUNG WILD GOAT.

even the frame of the building in which the owner lives, actually eating him out of house and home. The natives tell strange and marvellous stories of their depredations. It is related that an elegant chair, owned by a wealthy man, who prized it for its associations with the nobility of his native land, suddenly collapsed as a visitor seated himself upon it. On examination,

it was found that the whole structure was nothing but a shell, the white ants having eaten away all else. They had not been seen, for though blind themselves, they always manage to keep out of sight, working silently in the dark until the hardest piece of wood, without showing any signs of the havoc wrought, is but a husk.

The greatest pest is yet the locust, which resembles a large grasshopper, and comes every few years in vast numbers, swarming over every green field until laying bare and desolate acres on acres of growing crops. The hemp plantation is exempt from their depredations, but nearly every other crop is in

CALAO BIRD.

danger from them. Upon the approach of these ravenous creatures in great clouds, winging their flight from place to place, the natives assemble about the threatened field, and make all the noise they can, or make a dense smoke by burning damp fuel. These efforts may be partially

SANTA CRUZ PLAZA, MANILA.

successful, but a locust flight is always marked by a wide path of ruined crops.

Still, it is "an ill wind that blows nobody good," and the poorer class of inhabitants consider the locust a luxury for their table, and they lay their plans to catch all they can. In some cases the parish priest has been besought to pray that this scourge of the planter might come often and stay long with them.

In 1851 some martins were imported from China by the government, it being claimed that they were great enemies to the locust. The newcomers were received with great enthusiasm, and treated with the utmost veneration. They have thrived well in their new home, while the locusts have not seemed to lose anything by them.

Mosquitoes have enemies in the newt and *chacou*. The last is a sort of lizard, homely and ugly-looking enough to frighten away even mosquitoes. The newt is liked by the inhabitants, and is spared with particular attention. A shy crea-

ture, he has a peculiar habit, if caught by the tail, of shaking that appendage off and scampering away minus the ornament. Fish of numerous kinds swim in the surrounding seas, while sharks add zest to the excitement of the fisher.

If showing rather an unfavourable inventory of mammals and carnivorous animals, the Philippines are fortunate in the number and variety of birds. No less than six hundred species are found on the islands. Some of them are of rare beauty, but among them all there is not a sweet-voiced songster. The game birds are snipe, pheasant, pigeons, ducks, woodcocks,

PEACOCK.

and other waterfowls. Hawks, cranes, herons, parrots, and paroquets are peculiar to the Archipelago. Romantic accounts are given of strange birds and their habits. Among them it is told of a bright little bird that immediately dies upon being captured; another is a small, dark-coloured bird which builds its nests in the tails of wild horses; another has the colours of the rainbow, and can imitate the cries of all others of the feathered tribe; still another is a pigeon with a crimson splash on its breast as if the blood had gathered there from a wound. The dusky-hued crow, known the world over, the brilliant cockatoo, the saucy kingfisher, and the poet's turtledove are all found here. There is a species of swift whose nests are highly valued as an article of food. These are made from the salivary excretions coming from the builder, and are found in caves or on the sides of steep cliffs, where it is dangerous for man to climb. The first nest for the season made by the bird, usually in December, is pure in its material, and when dry becomes hard and looks like glue. It is claimed to be worth its weight in gold. But after the bird has been robbed once or twice she begins to include foreign matter in its construction. Nest-hunting is a paying vocation, the Chinese being the principal buyers.

At night, during the dry season, very brilliant fireflies hover and flutter around some of the native trees like moths around a candle, until the entire foliage is illuminated as if by thousands of tiny lamps swaying in and out among the branches, making it a fascinating picture.

VILLAGE ON MINDANAO.

CHAPTER IV.

SPANISH DISCOVERY AND DOMINION.

AT the dawning of the sixteenth century, while the Philipinos were indolently whiling away lives that were less than scratches in the sands of time, their greatest concern the state of the activity of the near-by volcano, their only care to be prepared for the terrible typhoon which came with equinoctial regularity, or the earthquake which was likely to break upon them as a thief in the night, and their most severe exertion a skirmish with some rival tribe, Spain and Portugal were quarrelling over the supremacy of the world. It mattered not if these European powers, in their ignorance of the land and sea, dreamed not of these island kinglets. Their fates hung in the balance of these ambitious nations.

Anxious to court the mutual favours of the rivals, Pope Alexander VI., styled "the vicar of God on earth," sought to end the intense feeling by issuing in 1494 a papal bull which declared that the globe should be divided into two hemispheres, the meridian of Cape Verde Islands and the same degree of longitude on the opposite side of the sphere to be the

dividing lines of the nations. To Spain was decreed the western hemisphere, while on Portugal was bestowed that on the east, each to have the right to claim and colonise all heathen lands they might discover within their respective allotments.

The Spanish government, on the 10th of April, 1495, granted its royal sanction to all who wished to search for lands in the unexplored quarters of the globe. This done, in the excitement of the discoveries of Columbus, the rivalry was transferred from the courts of royalty to the ships of the adventurous navigators, who pushed out more boldly than ever into the far

RIVER SCENE ON MINDANAO.

and unknown seas. Among these was Vasco Nunez de Balboa, whose discovery on the 26th of September, 1513, of an ocean on the western shore of America created widespread interest. But if De Balboa gazed on the broad Pacific, it was from the mountain-top, with his ships far behind him, and how to get them across to the newly discovered waters was a mystery and enterprise left to be solved by that prince of circumnavigators, Hernando de Maghallanes, a Portuguese noble by birth.

Maghallanes had accompanied an expedition fitted out by Portugal to visit Moluccas or Spice Islands, with which that country had opened trade some years before, and on that voyage the islands of Tidor and Badau

were discovered, suggesting to him an inkling of what might lie in the sea extending into the Far East. But before he could carry out his project of further exploration in that direction he had trouble with his king of such a serious nature that he renounced his birthright, and became, by naturalisation, a citizen of Spain, and his name was changed to Ferdinand Magellan. King Charles listened with favour to his scheme, and fitted him out with five vessels, which set sail on their long voyage the 10th of August, 1519.

Crossing the Atlantic in four months, the little squadron reached Rio Janeiro safely on the 13th of December. Standing then away to the south, in the hope of finding a passage to the Pacific, Magellan soon found himself obliged to resort to strenuous measures in order to prevent an outbreak among his followers, some of whom objected to the course taken by him. Unfavourable weather succeeding, a short stop was made at the mouth of the Rio de la Plata (Silver River), then named Rio Solis, in honour of one of his captains who

MINDANAO WARRIOR.

met his death there. Soon after resuming his advance, one of his vessels was wrecked and another deserted him, so that only three ships of his little fleet were left him when, on the 28th of October, 1520, he entered the channel since known by his name, and on November 26th stood bravely out into the vast Pacific, with no knowledge of what lay in his pathway.

Following a northwesterly direction, the Mariana, or Ladrone Islands, were discovered on the 16th of March, 1521, where a short stop was made. The natives crowded around the ships in such numbers that a fierce fight ensued, and as they seemed determined to steal everything they could, the place was given the name which in English means "Robbers' Islands." Sailing westward from this point, Magellan next reached one of the largest of the Philippine Islands, Mindanao.

Anchor was cast at the mouth of Butuan River, and the vessels lay off shore, while crowds of brown-tinted natives swarmed around them, believ-

MERCHANT VESSELS NEAR BRIDGE OF SPAIN, PASIG RIVER.

ing that the light-skinned newcomers in their mighty ships were messengers of light coming from the land of dawn. The day of discovery having been that dedicated to St. Lazarus, the island was named in honour of that patron of the Church, a name afterward extended to cover the whole Archipelago. The natives proving friendly, the Spanish took possession in the name of Charles I. without bloodshed, and it being Easter week they proceeded to consecrate the new possession to God and the Catholic Church with all the dazzling display of the ritualist rites.

Then, inducing the Butuan chief to become his pilot, Magellan sailed to the island of Cebu, which he had been told was richer than the one first seen. Here he was greeted with a greater number of natives than before.

NATIVE THEATRE, PAGIIG.

all of whom were armed with spears and carried shields. A few words from the Butuan chief, however, convinced the inhabitants that the visitors were disposed to be friendly, when the chief of Cebu consented to a treaty of peace, providing it could be carried out according to Cebuan ideas of ratification. This was to draw blood from the breast of each man, and from as many natives, one to drink that of the other.

The condition was accepted by Magellan, and the ceremony denominated by the Spaniards as *Pacto de sangre*, or "brotherhood of blood," completed, they proceeded to disembark. A hut was then erected on the shore, when the impressive scene of mass followed. Looking on with awe, the king and his men accepted the baptism, and swore allegiance to Spain. All of this but slightly understood by the natives, Spanish rule at once began.

Upon learning that their new subjects were at war with the inhabitants of another island, called Magtan, Magellan offered himself and men as allies, seeing further visions of conquest, and it might be of riches. His offer was gladly accepted; but at the first skirmish with the enemy Magellan was mortally wounded by a poisoned arrow on the 25th of April, 1521, when the allied forces retreated in disorder.

Thus miserably perished, at the very zenith of his glory, a man worthy of a better fate. In his untimely fate Spain lost her most illustrious and deserving navigator, Columbus alone excepted. Both of these were not native-born, but adopted citizens. The deeds of the great Portuguese are commemorated by a monument, erected, it is believed, where he fell on the island of Magtan. On the shore of Cebu is an obelisk marking the beach where he first landed on the island, while in front of the city of Manila, on the left bank of the Pasig River, stands a third testimonial to the memory of the discoverer of the Philippines.

One of Magellan's subordinates assumed command of the squadron, but this leader, Duarte de Barbosa, with twenty-five of his companions, was killed at a banquet given by the King of Cebu. A Spaniard named Serrano was alone spared of all on the shore at the time, and he was held for a ransom of two cannons from the ships. In the hope of driving the Spaniards to their terms, this captive was marched up and down the beach in plain sight of his countrymen. In accordance with Serrano's signals, and fearing to remain longer in that vicinity, the Spaniards weighed anchor,

and sailed away from the island, leaving their unfortunate comrade to an unrecorded fate.

The history of this expedition, the first voyage around the globe, and the greatest which had been made at that time, is filled with a series of misfortunes and misadventures which give it a melancholy interest. Their numbers now reduced to less than one hundred, which was too small to navigate the three vessels, after dividing the seamen between two of them, one was burned off the coast of Cebu. The remnant of the little squadron, which had sailed so proudly out of the home port,

MOUTH OF RIVER CUIHULO, PALAWAN.

now headed for the island of Borneo, which was known to the Portuguese.

On their way thither the island of Palawan was discovered, but some of the seamen were lost, the ships were separated, and after many more misfortunes and great hardships, three years from the time of their departure a mere handful of the original numbers—seventeen skeletons of hardy men, ragged, and famished—walked barefooted through the streets of Seville that they might reach the cathedral and offer their thanks to God for their safe return, before receiving the homage of their countrymen over the achievements of their remarkable voyage. Elcano, the commander, was granted a life pension, knighted by the exultant King Charles, and given permission to place on his coat of arms a globe having the motto, "*Primus circumdedit me.*" The remaining ship of Magellan's squadron had fallen into the hands of the Portuguese, after being disabled and most of the seamen lost. The

survivors were sent to Lisbon, which they reached five years from the time of their departure on the memorable expedition.

Aroused by the discoveries of Magellan, Charles fitted out other expeditions, none of which accomplished anything worthy of note. De Villabos, the commander of one, renamed the islands in honour of the king's son, Philip, heir apparent to the throne of Castile, the Philippines.

Philip II., who succeeded to the throne on the abdication of his father in 1555, was a religious bigot. He immediately fitted out a squadron of four ships and a frigate, with eight hundred soldiers and six priests,

VILLAGE OF BAHELE, PALAWAN.

with the avowed purpose of subjugating the natives of the Philippines and bringing them under the influences of the Church. A famous Basque navigator, named Miguel Lopez de Legaspi, was placed in command. In the due course of time the fleet appeared off the coast of Mindanao, to the wonder and terror of the inhabitants. The king set a watch over the mysterious comers, who soon proclaimed that they were men of mighty stature, with white faces and long beards; that they blew smoke and fire out of their nostrils, ate stones (sea biscuits), commanded the thunder and lightning, and were no doubt powerful gods. This announcement was received with dismay, and the natives received the

Spaniards in a friendly manner, as their fathers had Magellan and his followers. They gave them glowing accounts of the power and riches of Cebu, lying to the south. Legaspi resolved to reconquer this island and add it again to the realms of the king.

But the Cebuans resisted the new arrivals on every hand, and when they could not cope with them in open battle retired to the deep forest surrounding the town, and waged a predatory warfare. Harassed thus, Legaspi several times thought to abandon the quest, but he finally captured the city, and, winning over to his side some of the leading natives,

OLDEST CHURCH IN MANILA.

made a firm stand. The island was declared to belong to the Crown of Castile, and its inhabitants to be subjects of Spain. A messenger was despatched back to the mother country with the news of their success. The natives began to flock to the standard of their conquerors; the king's daughter married one of the Spaniards, and several alliances by marriage were afterward made.

In the midst of the good fortunes of these foreign invaders, the Portuguese, who, ever since their discovery by Magellan, had claimed that they belonged to them, according to pontifical appointment, appeared on the scene to dispute the authority of the new claimants. But they proved

weaker than their rivals and were obliged to withdraw, whereupon Legaspi built a fortress and laid out streets on which the Spanish began to build houses. In 1570 intelligence reached Legaspi that the King of Castile had declared him governor-general of all the islands he might discover and hold. He thereupon proclaimed Cebu a Spanish capital, and sent an expedition to bring the island of Luzon, of which he had heard much, under his jurisdiction, giving the command to his grandson, the youthful Juan Salcedo.

The appearance of the warlike strangers before Manila, then called Manyla, the ancient capital of Luzon, caused the natives to capitulate without resistance. The island of Mindoro was next seized, and the governor-general apprised of the conquests. On the arrival of Legaspi at Manila the following year, that city was declared to be the capital of the whole Archipelago, and the sovereignty of the king was pronounced over the entire group of islands. Governor-General Legaspi died on the 20th of August, 1572, and his war-worn body was given burial in the St. Augustine Chapel of San Fausto in Manila, where the standard of Spanish royalty and the armorial bearings of the conqueror remained until the occupation of the capital by the English nearly two hundred years later.

Thus, with what was relatively a mere handful of followers, this persevering and honourable champion of Spain won almost without bloodshed one of her richest colonial possessions, and established Spanish power in the Far East.
